

WEeping ECZEMA SOON RELIEVED

A Perfect Treatment For This
Distressing Complaint

WASING, ONT.
"I had an attack of Weeping
Eczema; so bad that my clothes
would be wet through at times.

For four months, I suffered terribly.
I could get no relief until I tried
'Fruit-a-tives' and 'Sootha Salva'.
The first treatment gave me relief.

Altogether, I have used three
boxes of 'Sootha Salva' and two of
'Fruit-a-tives', and am entirely well!"

G. W. HALL.

Both these sterling remedies are
sold by dealers at 50c. a box, 6 for
\$2.50, or sent on receipt of price by
Fruit-a-tives Limited, Ottawa.

"Fruit-a-tives" is also put up in a
trial size which sells for 25c.

HUNS AGAINST AIR RAIDS

Geneva, Aug. 31—An important
meeting of representatives from eleven
Rhine towns began yesterday at Saar-
brücken. The conference was called
to discuss means of protesting to the
government against allied air raids.
It was decided to appeal to German
headquarters to come to some arrange-
ment for both sides to abstain from
air attacks on open towns.

Cook's Colton Root Compound.

A safe, reliable regulating
medicine. Sold in three de-
grees of strength—No. 1, \$1;
No. 2, 50c; No. 3, 25c per bot.
Sold by all druggists, or sent
prepaid on receipt of price.
Free pamphlet. Address:

TORONTO, ONT. (Formerly Hixson.)

HOW THE POULTRY HOUSE SHOULD BE CONSTRUCTED

(A. C. McCulloch, Provincial Poul-
try Superintendent.)

Several styles of roof may be used
in poultry house construction though
some are more satisfactory than
others. Those most commonly used are
shed-roof, double-pitch, semi monitor.

Shed Roof

This roof has one slope only, usu-
ally to the north. It is cheap in con-
struction, easily built, and is used
most extensively on small houses. If
used on deep houses it is necessary to
have the house too high in front or
too low in the rear in order to have
sufficient slope for the roof. It is not
often used in the houses more than
12 feet deep. It cannot very well be
used with a straw-loft.

Double Pitch

The double pitch roof has a slope
each way, usually to the south and the
north. It is more expensive and harder
to build than the shed roof but it can
be used on deeper houses and is ideal
for a straw-loft, providing plenty of
space above the plates. When the
straw loft is used it is warmer in win-
ter and cooler in summer.

Uneven Pitch

This is a double pitch but one slope
is longer or steeper than the other.
Frequently the south slope is shorter
and steeper, the idea being to have a
smaller roof space receiving the di-
rect rays of the sun and thus prevent
over-heating of the interior in summer.
It is usually used without the straw-
loft.

Semi-Monitor

This consists in reality of two roofs

usually with about the same slope but
the rear one being about two or three
feet higher than the front. In this
space glass and cotton are used. This
roof is used particularly in deep houses
and provides a means of getting sun-
light well back into the building. The
cotton is used to let off moisture from
the interior of the house. The semi-
monitor is extensively used in all cli-
mates, especially temperate ones, on
deep houses. It is, however, expensive
and difficult to build, cannot be used
with a straw loft and does not work
as nearly automatically as some of the
other styles of roof.

Floors

Three kinds of floors are in common
use in poultry houses, viz concrete,
board and earth. All three kinds are
usually satisfactory if properly con-
structed though local conditions to a
considerable extent determine which
is most desirable.

Concrete Floor

This is practically unknown in poul-
try houses in New Brunswick. It is
used in permanent stationery houses
only. It is exceedingly durable and in
many sections of the country little if
any more expensive than boards. A
house with a cement floor should have
a stone or concrete foundation. About
eight inches of small or broken stone,
course gravel, or cinders should be
used beneath the floor to prevent
moisture coming up from the earth
below. On top of this should be an inch
or two of course cement mixed at ra-
tio of about one part cement to eight
or ten parts gravel. Above this should

Thought She Would Lose Her Little Girl With DIARRHOEA

Thousands of infants die annually
who could be saved by the timely use
of Dr. Fowler's Extract of Wild Straw-
berry.

There can be no doubt about it.
During the seventy-two years that
this wonderful remedy has been on
the market, it has been proved con-
clusively that it is the best for diar-
rhoea, dysentery, colic, cramps, chol-
era infantum, and all looseness of the
bowels, especially when the children
are teething.

Many of the imitations of "Dr.
Fowler's" being offered to the public
today are positively dangerous, as
they often check the diarrhoea too
suddenly, cause inflammation and
leave the bowels in a constipated con-
dition. "Dr. Fowler's" will not do this
but will impart a healthy tone to the
mucous surface, and stop the diar-
rhoea in an easy and natural way.

Mrs. M. Tyler, Orland, Ont., writes
"I have used your wonderful medicine
for nine years with great satisfaction.
My little girl was only five months old
and she was so sick with diarrhoea I
thought she would die. I was advised
by a friend to try Dr. Fowler's Extract
of Wild Strawberry, and it gave her
quick relief. I have used it ever since
for the whole of my family, six in all,
and can praise it more than anything
I ever used."

The genuine is put up by The T.
Milburn Co., Limited, Toronto, Ont.
Price 35c.

BELGIUM'S FATE VISUALIZED IN STIRRING DRAMA

A story that will appeal to men and
women of all ages is "The Belgian,"
Sidney Olcott's stupendous visualiza-
tion of the tragedy of Belgium, which
comes to the "Gem" Theatre for Wed-
nesday and Thursday, Sept. 4th and 5th
1913.

The story opens in Belgium just be-
fore the terrible mailed fist descends
upon the peaceful nation and crushes
out the life of the country. One of the
artistic touches with which the picture
abounds is the shadow of a cross show-
ing Belgium crucified and the heel of
the Hun about to trample her under
foot.

Jeanne Destree and Victor Morenne,
portrayed respectively by Valentine
Grant and Walker Whiteside, are be-
trothed, but when a great sculptor dis-
covers Victor and offers to take him
to Paris Jeanne offers her little sav-
ings to help him defray his expenses
so that he, too, may become a great
sculptor.

And so he goes away and forgets
Jeanne and loves the Countess de
Vries. Then comes the war, and there
are some stupendous scenes, which
show the pitiful call to arms and the
handful of gentle Belgian peasants try-
ing to stem the tide as the forces of
the Prussian army devastated their
homes.

None of the stereotyped methods
are restored to, and the ending of the
picture is wonderfully artistic. Suffice
to say that the people who viewed
"The Belgian" at its trade showing in
the Strand Theatre, New York, were
moved to rise and cheer as the Amer-
ican troops appeared on the screen
marching to the aid of Belgium.

In the supporting cast are Sally
Crute, who does the best work she has
done as the Countess de Vries, a Ger-
man spy; Adra La Croix, who plays
Father Julian; Anders Rudolph and
George Majeroni.

College Girls and Men

When a man is mentioned, the Bryn
Mawr girl asks: "How much does he
know?"

The Vassar girl: "How much has he
got?"

The Wellesley girl: "Who is he?"
The Smith girl: "Where is he?"

be an inch of finer cement made by
mixing one part cement with four or
five parts sand. The floor should be
smoother with a trowel. Concrete
floors are frequently criticized on their
being too cold. This is not the case if
plenty of litter (six or eight inches)
is used. They are rat and vermin proof
and very easily cleaned.

Board Floors

A board floor in most parts of New
Brunswick is comparatively cheap. It
is easily built and warm if properly
built. It is, however, not rat or vermin
proof and is rather difficult to clean
especially if it becomes wet. The wood
very often swells or shrinks making
the floor uneven or opening up cracks.
A board floor should really be double
with tar paper between the two ply
of boards. The floor should be several
inches off the ground. The house
should be on a good foundation or else
well banked.

Earth Floor

This should in reality be called
"sand floor." A real earth floor is usu-
ally not desirable in that moisture
is continually coming up from below
and making the litter damp. An ideal
sand floor can be made by putting
eight to twelve inches of sand inside
the house and throwing the litter, usu-
ally straw, upon the sand. The birds
soon break up the straw and mix it
with the sand making a fine litter. If
the house is kept dry the mixture of
straw and the few top inches of sand
need be replaced only once or twice
a year unless the house is over-
stocked.

PALMER'S Summer Packs

for the **SOLES**

You can't enjoy farm labor with tired, aching feet. So, boys, slip your feet into Palmer's Summer Packs. Made from durable yet soft, pliable, oil-tanned, Skowhegan waterproof leather—the ideal farm shoe for comfort and wear.

Easy to put on and take off. Large eyelets, quickly laced. Solid leather heel, sole and insoles. Bellows tongues.
