

CHAUTAUQUA

FREDERICTON

August, 5-11

PATRIOTIC PROGRAM—HOLDING THE HOME LINES CARRYING ON

Big Lectures with Big Messages About the Great War.

"THE TRAGEDY OF ARMENIA AND SYRIA" Stirring Lecture by
Dr. Frederick G. Coan.

The **"OLD HOMESTEAD" QUARTET.** Third Day at Chautauqua

"ROBIN HOOD" by far Most Popular American Opera. Fifth Evening at Chautauqua.

"Robin Hood" is perhaps the biggest single attraction ever given on any Chautauqua program. If Chautauqua patrons were pleased with the "Chimes of Normandy" and "Mikado" in previous years, they will be more than delighted with "Robin Hood." Many remember the famous songs—"Then Hey! For the Merry Greenwood," "Brown October Ale," "Come Dream So Bright," "Tinkers' Chorus," "Oh, Promise Me," "Come Away to the Woods," "Ho! Ho! Then for Jollity," "Ye Birds in Azure Wing'd," "Armorer's Song," "A Hunting We Will Go," "Ah! I Do Love You," "Sweetheart My Own," "Love, We Never More Will Part," and others. Chautauqua will be the place to hear them in the opera "Robin Hood" presented in full cast.

Secretary of War Baker Says of Chautauqua

"I am constantly facing the splendid results of the work done by the Chautauqua in this country in creating and sustaining a sound patriotic feeling, and in carrying forward the great national enterprises which the government is necessarily bringing to the attention of our people; and I want you to know that as an officer of the government I not only appreciate the importance of the lecture platform as a means of communication and expansion, but also appreciate the work which you and your associates are doing as a contribution to our national cause."

WHISKEY SENT AS BALED HAY

Toronto, July 30.—"These be the days of real sport" for the license inspectors of Ontario. On Saturday the biggest seizure of whiskey ever made in Western Ontario was made at the City of Guelph, and under romantic circumstances. The whiskey reached Guelph on Friday hidden in a car labelled "baled hay," and addressed to the Imperial Mattress Company of that city, a concern that has no legal existence so far as known. It was gilled from a suburb of Montreal and the amount of whiskey was 40 barrels, containing ten dozen quart bottles a piece, so far as known, for only one

of the barrels was opened. To the casual eye, on opening the car, all it contained was baled hay.

Two operators, apparently experienced in the work, did the unloading, and all went well until the car was nearly empty, when Mr. Brown, the station agent, happened to notice that one of the barrels had the top broken in. His suspicions aroused, he put his hand into the barrel and fished out a bottle of whiskey. He at once ordered the shipment all back into the car, notified the license inspector, and the \$8,000 worth of whiskey was put under guard and confiscated. Meantime the mysterious strangers disappeared.

After all, the real luxuries of life are those on which nobody has been asked to Hooverize—sunlight, love, kindness, kisses, smiles, flattery—and flirting.

Takes Contributions, Too.

"Mrs. Bing's new baby is distinctly up to date."

"How's that?"

"It is such a red cross affair."

PRECAUTIONS TO BE TAKEN FOR PREVENTION OF FIRES

All chimneys should be built from the ground and not be supported by floors, wooden beams, posts, etc.

All wooden joists, beams, girders, etc., should be kept at least two inches clear of chimneys and at least twenty inches clear of the front wall of fireplaces.

Build all chimneys to a point at least three feet above flat roofs and two above ridge of peak roofs.

Never build a chimney wall less than six inches (one and one-half courses of brick) in thickness. Chimney walls eight inches (two courses of brick) in thickness or four inches of brick with tile lining are preferable. Use only cement mortar up to the first floor and above the roof line.

Coal or wood heating stoves set on wooden floors should have sheet metal underneath, extending at least 13 inches in front. There should be a clearance of at least 24 inches around stoves from combustible material or in lieu thereof, metal shields having a clearance of one-half inch from wood.

Never run stovepipes through closets, blind attic and other concealed spaces. Stovepipes passing through floors, partitions and sides of buildings should be protected by four inches of brick or concrete or double metal ventilated thimbles so arranged as to maintain at least a six-inch clearance between the pipes and combustible material, thimbles to extend at least three inches beyond the surfaces protected. Stovepipes to be kept at least twelve inches from combustible partitions, walls, ceilings etc. Long lengths of stove pipes are dangerous.

Furnaces should be set on concrete floors and at least an eighteen-inch clearance is necessary between top and sides of furnace, breeching and flues from ceiling, partitions and other combustible material which, if covered with asbestos or metal protection, would give a greater factor of safety. Hot air pipes in frame walls or partitions to be covered with 3-ply asbestos paper and kept two inches from wood work.

Steam pipes to be kept clear of contact with any combustible material.

Floors under cooking ranges having four-inch legs to be protected with sheet metal extending fourteen to eighteen inches in front and four inches at sides and back; if without legs, to be set on a foundation of three inch or four inch hollow tile or brick on top of metal. Where the range is set closer than eighteen inches to combustible walls, loose fitting metal shields extending twelve inches each side and six inches above the top line of range should be provided.

Coal and kindling wood should be kept in metal or metal-lined boxes.

Metal barrels should be made use of in the disposition of sweepings, refuse and ashes.

Incubators and brooders used in connection with poultry raising constitute a special hazard. Approved devices only should be installed and their installation and upkeep should be carefully supervised.

The lighting hazards embrace electricity, artificial, natural and acetylene gas, kerosene and kerosene vapor gasoline vapor, candles, lanterns and torches, all of which contribute a common hazard to farm property and should be thoroughly safeguarded.

Matches should be used carefully. Safety matches are preferable to any others.

Fertilizers and manures are known to burn spontaneously and should be stored in concrete or other fireproof sheds, roofed over to exclude the sun's rays.

Fodders and grains when stored away too green or wet are very liable to set barns on fire by the heat generated in fermentation.

Lightning rods should be installed as a protection against lightning.

Ladders to roofs to be readily available.

CAN WE CHAIN THE FIRE FIEND?

There are some very interesting and instructive diagrams in a bulletin on forest fires just issued by the Forestry Branch of the Department of the Interior. These diagrams show that throughout Canada, whenever the rainfall becomes unusually light, the number of fires increases. Generally speaking too, the higher the temperature the greater the danger of fire. The bulletin is entitled "Forest Fires in Canada 1914-16", and the extent of the losses to the nation from this cause makes the publication of particular value. The statement of these losses will aid in arousing Canadians to the need of stopping forest fires and details of statistics will show that forest fires can be stopped, just as surely as losses are kept down by a good fire brigade in a city. With the exception of lightning, all forest fires are started by men, and if men were careful there would be no fires. The success of systematic fire protection measures is shown and the whole bulletin gives much valuable information on this important subject. Copies may be had free on application to the Director of Forestry, Ottawa.

WITHOUT PURE BLOOD HEALTH IS IMPOSSIBLE

Owing to the faulty action of the kidneys and liver, the blood becomes filled with disease germs that imperil health.

The first warnings are backache, dizziness, headache and lack of energy. Act quickly if you would avoid the terrible ravages of chronic kidney complaint. Get Dr. Hamilton's Pills today; they cure kidney and liver troubles for all time to come. No medicine relieves so promptly, cures so thoroughly. For good blood, clear complexion, healthy appetite, use that grand health-bringing medicine, Dr. Hamilton's Pills. Get a 25c. box today.

FORMER FRENCH PREMIERS HAVE GOOD WORDS

Paris, July 30.—Former Premiers Viviani, Briand and Ribot were heard today at the trial of Louis J. Malvy, former Minister of the Interior, who is on trial charged with holding communication with the enemy. This was known as Premiers' day, all three witnesses having been premiers when Malvy was head of the interior department.

M. Viviani protested against the report that M. Malvy had been the creature of M. Caillaux. He said that Malvy had always done his duty.

M. Briand said that when he formed a cabinet he intended to exclude Malvy, as he was no personal friend of his, and differed in politics; but at the eleventh hour he decided to confide the portfolio of the interior to Malvy as the best man available.

M. Ribot testified that during the three years he was the colleague of M. Malvy nothing occurred for which the minister could be reproached.

WANTED

Capable person as assistant to the City Treasurer. One who understands bookkeeping and stenography preferred. Apply in writing, stating experience and salary wanted to
G. R. PERKINS,
City Treasurer.

7-20 21

TEACHER WANTED—Second class female teacher wanted for School District No. 5, Allandale, York Co. Apply, stating salary wanted, to J. S. MADDEN, Allandale.
