

## "Children Love Cascarets"

Keep your little Pets healthy, strong and full of play by giving a harmless candy Cascaret at the first sign of a white tongue, feverish breath, sour stomach or a cold. Nothing else straightens up a bilious, or constipated youngster like these delightful cathartic tablets—Only ten cents a box.

TO MOTHERS! While all children detest castor oil, calomel, pills and laxatives, they really love to take Cascarets because they taste like candy. Cascarets "work" the nasty bile, sour fermentations and constipation poison from the child's tender stomach, liver and bowels without pain or griping. Cascarets never disappoint the worried mother. Each ten cent box of Cascarets contains directions for children aged one year old and upwards as well as for adults—absolutely safe and harmless!

## MOVIE PEOPLE POOL INTERESTS

Los Angeles Cal. Jan. 15—Miss Mary Pickford, Douglas Fairbanks, William S. Hart, Charles Chaplin and D. W. Griffiths have banded together and the actress and actors will hereafter produce their own pictures, according to an announcement made here today by Douglas Fairbanks.

## Notice of Legislation.

Notice is hereby given that the Town of Marysville will, at the next session of the Legislature of New Brunswick, make application for the passing of an Act to fix the valuation for assessment on the Nashwaak Pulp and Paper Company, Limited, in the Town of Marysville, in the event of such Company establishing a Pulp or Paper Industry at Marysville, at a sum not exceeding fifty thousand dollars, for a period of twenty years.

Dated January 10th, A. D. 1919.  
(Signed) A. D. MACPHERSON,  
(L.S.) Town Clerk.

WANTED—Books and magazines for distribution to returned soldiers en route home, in the Military Hospitals or going overseas. Telephone Mr. A. Murray, care of A. Murray & Co. Tel. No. 159, or leave at store for Military Y. M. C. A.

## WHY BELGIANS STILL NEED HELP

"In travelling through Belgium with the Belgian armies, I have been able to see the country recently tenanted by the Bochs in the condition in which they left it, and never was there such desolation anywhere. One cannot get away from signs of destruction, no matter where one goes, along the country roads or in the city streets.

Not only has property been destroyed and every means of livelihood taken away from the people, but the peasants, especially in the country districts, have been left destitute both of home and food. We travelled twelve miles yesterday through open country and as but one small instance of the vast plundering of the Germans, let me state that in all twelve miles not one solitary live animal did we see, and practically every tree had been felled, so you can imagine the dreary aspect of the scenery.

All the peasant women and children we met on our way, said a news correspondent, while they greeted us with cheers and received us into their homes with open arms, those that had homes, showed the greatest suffering from insufficient food and nourishment. They did not complain, but merely stated as a fact that they had not tasted meat for two months and had lived largely on soup and coffee.

The cry of the Belgians today is for food and clothing and those who would help, no matter how little,

## BEANS ARE RECOGNIZED AS A PROFITABLE CROP

Acreage in Canada Has Been Greatly Increased in Recent Years—Annual Yield is Close to One Million Bushels—Disease Causes a Heavy Annual Loss—Care Should be Exercised in the Selection of Seed.

In many sections of the Dominion bush beans are now recognized as a profitable special crop, and the acreage has been greatly increased during the last few years. Approximately 100,000 acres are planted yielding considerably over one million bushels. Destructive diseases have accompanied this increase in cultivation and unless the farmer takes precaution to eliminate disease the crop will not continue to be as popular or profitable as it should. It is safe to say that probably 25 per cent of the crop is frequently lost through the attacks of one or more diseases which might be largely prevented by planting disease free seed. The more important disease are as follows:—

Anthracnose is probably most destructive in the Maritime Provinces and Quebec and some years in Ontario. It is caused by a seed-borne fungus which attacks stem, leaves pods and seed, producing dark brown to almost black sunken spots on the stem and pods and a blackening of the veins in the leaves. When severe the plants may be completely defoliated or even completely destroyed leaving skips in the row.

Bacterial Blight is a serious problem to the bean growers of Ontario and to a less extent elsewhere. The bacteria or germs causing this disease are seed-borne and attack the stem, leaves, pods and seed, producing on the seed light yellow blotches sometimes involving the whole seed. Infected leaves develop small irregular water soaked areas, which later turn brown and fall out. The spots on the stem and pods are of a raised, water soaked appearance with a yellow to reddish amber colour, usually smaller and not so dark as Anthracnose spots.

Rust and roots of beans occur less frequently, but nevertheless are capable of causing serious loss. In many cases these may also be carried on the seed.

Mosaic: This is a new disease which

should send their contributions to their committee, or direct to the Central Committee, Belgian Relief Fund 59 St. Peter street, Montreal.

was reported as common in Southern Ontario last year. The leaves on infected plants develop a peculiar mottled appearance. Diseased plants produced a few small pods as compared to healthy plants. Little is known concerning it. Its nature would indicate that seed from affected plants would probably produce a diseased crop therefore the use of such seed should be avoided.

### Control Measures.

Plant only disease free seed on soil which has not lately been planted to beans. This can be best accomplished by selecting at the time of harvesting disease free pods from vigorous high yielding plants. These selected pods should then be immersed for not more than 3 minutes in disinfecting solution, allowed to dry off and stored in a clean muslin bag or other disease free container.

The seed from these pods should be used the following spring to plant a bean seed plot. While this is not sufficient to ensure the obtaining of disease free stock the first year, it will if practised regularly reduce disease to a minimum, and thus largely remove the cause for poor yields.

Where pod selection has not been previously practised the first start should be made by securing seed from a field relatively free from disease. This stock should be very carefully hand-selected, removing all spotted or even slightly discolored seed. After this has been done the seed may be immersed in solution of copper sulphate 1:100 for 3 minutes or in a formalin solution 1:300 for 5 minutes, allowed to dry and planted.

Beneficial results might also be obtained by pulling out and destroying diseased plants as they appear from time to time during the growing season.

So far spraying beans has not proven a commercial success but probably might be used to some extent in helping to prevent the spread of disease in seed plots.

Cultivating, hoeing or picking beans while the foliage is wet should be avoided as the disease is readily carried from diseased to healthy plants under such conditions.

## EXPERIENCES OF PTE. DANNY IN FRANCE

(Chicago News)

We're lying in a rest camp now—that is if you don't mind what you say. The man who first called one of these places where soldiers are billeted after they been on the march "rest camps" would call working fourteen hours a day in a boiler factory "play."

Just the second you get easy some bird with a silver eagle on his shoulder strap fingers out that if a soldier is allowed to play around and rest much he might go plump crazy so this Curnel stays up nights with the majors working up thinks for us poor buck privates. It used to be drills and camp jobs and digging trenches and little things like that and of course it aint so bad now we're moving on towards the Rhine with no Germans to stop us.

We got ahold of a bright young kid the other day that handed us an awful line of stuff. "What did you do before you was drafted?" we asked this bird. "I was a lion tamer," he said without batting an eye.

Well that kind of stopped us but pretty soon Fat Walters asked him how he trained lions.

"Easy," he said back. "I just goes into my cage where my lions are and I picks out the lion I'm going to train. Then I goes up to this lion and I says 'Open your mouth lion.' And then I reach in and pull out his tongue and give it a couple of shakes. Then I pulls his ears hard and give him a couple of kicks in the ribs—and that lion's trained."

"Say, what did you say you was?" Fat asked.

"Lion tamer," this bird answers pretty much up stage.

"Lion tamer," Fat answers, "lion tamer—you're a lyin' fool."
