and boats. Stable in connection.

FOR SALE—An Eastman folding cam-
era, 4x5, in good condition; will be sold
at a bargain. Apply at the Mail Office.

HER LITTLE GIRL HAD DYSENTERY

Bowels Moved as Many as 25 Times a Day.

Dysentery manifests itself with varying degrees of intensity, but in well marked cases the attack is commonly preceded by some amount of diarrhoea, which gradually increases in severity, and is accompanied with griping pains in the abdomen. The discharges from the bowels succeed each other with great frequency and the matter passed from the bowels, which at first resemble those of ordinary diarrhoea soon change their character, becoming scanty, mucous or slimy and subsequently mixed with, or consisting wholly of blood. Never neglect what at first appears to be a slight attack of diarrhoea or dysentery may set in.

Cure the first symptoms by the use of Dr. Fowler's Extract of Wild Strawberry.

Mrs. Jno. V. Tanton, R. R. No. 3, Watford, Ont., writes: "My daughter was taken down, two years ago, with dysentery, and I could find no help for her until I got a bottle of Dr. Fowler's Extract of Wild Strawberry. She was only two years old, and ate something different to what she was used to. She had as many as twenty-five movements a day and mostly blood. We had the doctor several times, but no relief came until we used 'Dr. Fowler's'. I would not be without it in the house for a good bit."

Be sure and get "Dr. Fowler's" when you ask for it. Price, 35c. a bottle; put up only by The T. Milburn Co., Limited, Toronto, Ont.

ETHEL'S PAPA.

Mother—No, Ethel, a visit to the seashore is out of the question this year. Your father can't afford it.

Ethel—Mother, has it ever occurred to you that father could work harder if he tried?

H. W. WOODS,
Post Office Inspector.
Post Office Inspector's Office,
July, 4th, 1919.

ARMIES OF ICE WILL SWEEP MEN AND CITIES FROM EARTH

Armies of ice will sweep man and his cities off the earth in about 100,000 years, so why lose health over the Peace Treaty leak and the fixing of new national boundaries? So quoth the brontosaurus, in the American Museum of Natural History, New York.

"Be calm, don't try to conquer eternity, it beat me 9,000,000 years ago, this huge thing seems to whisper to Major Herbert Dawley, as the native of Chillicothe, Ohio, sizes him up for moving picture purposes.

Musing on this reptile and others, big as a house, that Nature overwhelmed, the scientists have written these words for visitors to ponder.

Marshalling Forces

"There is good reason to believe that we of the northern hemisphere may be living in the midst of an interglacial epoch, and, if this be so, then even now slowly but relentlessly the hosts of the ice king are being marshalled to dispossess man of his fair heritage in the North. Twice, at least, in the past, our Northern States, as well as Europe, have been buried beneath thousands of feet of ice and

snow even as is the South Pole today. "Gradually is being assembled the army that will sweep man before it even as it did the mammoth and mastadon in past ages; advancing a few feet this year, retreating a foot or two next season, but never losing all the ground it has gained, the great ice sheet is slowly shaping out of mist and snow the vast fighting machine that will drive man from the populous cities of the North.

Scientists Prophecy

"And who shall say that 100,000 years from now, when the great earth pendulum has swung the other way, some race of supermen, working northward as the climate changes may not be investigating the site of this museum and reconstructing the habits of the poor, unintelligent inhabitants of what was once New York."

However during this warm spell, Major Dawley is helping the professor by animating in moving pictures the effigies of these monsters of the long ago.

So faithfully does he study their poor remains, so accurately does he reproduce them in their habits of eating 700 pounds of greens in a day that

Nearly Every Girl Can Make Herself Pretty and Attractive

 SOME WHOLESOME TRUTHS
EVERY GIRL SHOULD
THINK ABOUT.

Probably you know just such a girl.

Perhaps she is sixteen—good to look at, and pretty—quite interesting because she reflects the grace and charm that gives promise of happiness to herself and others. But she is not so rosy, has faded away—her eyes are listless—the buoyancy of spirit and strong. The color in her cheeks, once vigor she once possessed are sadly lacking. Parents, friends, this girl needs Ferrozone—needs it that her blood may be renewed—needs it to restore the nerve force that growth, study and the development of her fresh youth have exhausted. This girl will become queen with Ferrozone—which will restore her color—bring back her oldtime energy—give brightness to her eyes and vivacity to her spirits. In Ferrozone every girl finds strength—then she can do things. In Ferrozone there is endurance—that drives away morning tiredness and languor. For the girl or woman that wants to be happy, healthy, winning—who values rosy cheeks, laughing eyes and abundant good spirits, nothing can compare with Ferrozone. 50c. per box, or six for \$2.50. Get it today from any dealer in medicine, or by mail from The Catarrhzone Co., Kingston, Ontario.

his pictures have praise from the scientist who censured his colleague for saying the Thunder Lizard was 70 feet long, when it was only 60.

MEDICAL INSPECTIONS OF THE NEW BRUNSWICK SCHOOLS

ADDITIONAL REGULATIONS UNDER PUBLIC HEALTH ACT.

Medical Inspection of Schools.

173. The schools of the Province shall be taken as constituting two classes, that is to say, urban and rural schools.

174. "Urban" schools shall be those situated in cities, towns and incorporated villages, and shall include consolidated schools, whether situated in urban localities or elsewhere.

175. "Rural" schools shall be taken to include all other schools not comprised within the class of urban schools.

176. For the purpose of Medical Inspection of Schools, it shall be the duty of each sub-district Board of Health to divide its sub-health district into Medical School Inspection areas in such a manner, as far as may be, that each such area shall include but one class of schools—urban or rural.

177. In each such area there shall be appointed, with the approval of the Chief Medical Officer, by the sub-district Board of Health concerned, a Medical Inspector of Schools, who shall be a legally qualified medical practitioner of the Province, and who shall be paid a fixed yearly sum for his services by the said sub-district Board of Health, out of the funds of the Board.

178. Each such Medical School Inspector shall be subject to the immediate direction of the District Medical Health Officer concerned, under the general supervision and control of the Chief Medical Officer.

179. It shall be the duty of each Medical School Inspector to render a half-yearly report, that is to say, upon the close of each school term, to his District Medical Health Officer, through the Secretary of the sub-district Board of Health concerned, setting forth the number of schools in his inspection area, the number of schools and children examined, with the names of the respective teachers, the number and nature of defects discovered, physical and mental, the number of children affected with communicable disease, the disposition of such cases of defects and disease, the results therefrom, and generally such other information as may be called for by schedule laid down by the Minister, and as may be deemed expedient to be obtained by the District Medical Health Officer.

180. Such reports shall be transmitted to the Chief Medical Officer, who shall incorporate them, in whole or in synopsis, in his annual report to the Minister.

181. Such Medical School Inspectors shall not be discharged from office, except for cause, and with the approval of the Chief Medical Officer.

182. Each Medical School Inspector shall, in all schools under his charge, rural as well as urban, make a careful and complete examination of all children attending such schools, at least semi-annually, preferably, and as far as may be practicable at the beginning of each school term. Such examination shall be recorded upon forms prepared by the Minister, and supplied through the District Medical Health Officer concerned. Such forms shall be uniform for use throughout the Province.

183. Such examination shall take cognizance of acute and especially of communicable disease, and also of chronic disease or constitutional defects or deformities which may be present in said children. Upon written request to the Medical School examiner concerned, the parent or guardian of any child to be so examined may be present at such examination, and upon the receipt of such request, the medical examiner shall notify the said parent or guardian of the intended time and place of such examination.

184. In addition to such semi-annual inspection, urban schools shall be inspected at least monthly, or as much oftener wholly, or in case of individual pupils, as may be necessary. In consequence of requests to the Medical School Inspector or of the principals or teachers of said schools, or of request from other school authorities or upon the direction of the Chief Medical Officer or of the District Medical Health Officer concerned, or as emergencies may call for, in the opinion of the Medical School Inspector himself. The results of such inspection shall be recorded in the manner and way indicated in the form provided by the Minister.

In any instance, whether in a rural or urban school, if the teacher or principal has reason to suspect that any child in such school is affected with an acute communicable disease, such teacher or principal shall at once notify the Medical School Inspector concerned, who shall forthwith examine said child and act in accordance with these regulations. If, however, the services of such Medical School Inspector be not immediately available, such child shall be at once excluded from school by said teacher or principal and shall not be readmitted until provided with a medical certificate of freedom from contagion. In urban schools it shall be the duty of the medical school inspector concerned to at once examine such child at its house and to act accordingly.

185. No child affected with communicable disease shall be permitted to attend school until such disease is cured and the danger of contagion be eliminated as certified to by a regularly qualified medical practitioner, or until such disease be placed under such treatment and safeguards as shall satisfy the Medical School Inspector concerned, that all practical danger of communicating the disease to others is abolished.

186. In every instance where a case of notifiable disease is discovered by a Medical School Inspector, or is suspected by the teacher or principal of a school, such instance shall be at once notified to the District Medical Health Officer concerned,

through the secretary of the sub-district Board of Health concerned. In every instance of a case of notifiable disease being in the foregoing way, such notification shall at once be transcribed reported to a sub-district Board of Health otherwise than notified, as respects urban schools, to the Medical School Inspector concerned, and, as respects rural schools, to the principal or teacher concerned, by the secretary of the sub-district Board, specifying the name and address of the family so concerned.

187. No child shall attend school from a family in which there exists acute communicable disease, or from a house containing a person or family affected with such disease (unless in the latter case the person or family so affected has absolutely independent and self-contained entrances to such part of the house, which he, or it, occupies) until such acute disease shall have disappeared from such person or family and the danger of contagion is past, as certified to by a regularly qualified medical practitioner. The foregoing proviso, with regard to separate entrances, shall not apply to cases of smallpox.

188. The foregoing regulations shall not apply to children who are immune from the following diseases by reason of a previous attack, that is to say: Measles, Whooping-cough, Varicella or Chicken-pox, Parotiditis or Mumps and Rubella or German Measles.

189. Typhoid or para-typhoid fever occurring in a family shall not be a cause of exclusion from school of those members of the family not so affected.

190. In the matter of chronic disease or physical defects or deformities of school children, discovered by the Medical School Inspector, which, in his opinion, are amenable of cure or of improvement, an order shall issue from him to the parents or guardian of children so affected, to place such children under appropriate and lawful treatment for said disease, defect or deformity, and such children shall be permitted to attend school only after they are certified to by a legally qualified medical practitioner as either having been cured of said disease, defect or deformity, or as having been placed under appropriate treatment for the same, or that said disease, defect or deformity is not capable of cure or improvement, or that said disease, defect or deformity has been improved to the greatest practicable extent, or unless said practitioner shall certify that appropriate treatment shall be given within three months. In the event that said parents or guardians wilfully refuse or neglect to take such action as ordered by the said Medical School Inspector, and as is indicated in the foregoing, the said Medical School Inspector shall report such wilful refusal or neglect to the District Medical Health Officer concerned, who shall at once proceed by law to enforce the penalty against said parents or guardians, as is laid down in the Public Health Act of 1918. In these instances, however, where the parent or guardian is not financially able to pay for such treatment, upon affidavit being made by said parent or guardian to that effect, to the District Medical Health Officer concerned, and where free hospital treatment is not conveniently available, said treatment shall be done at the expense of the sub-district Board of Health concerned.

191. In the semi-annual and other medical inspections of school children, note shall be made by the Medical School Inspector of any child so affected by mental incapacity or insufficiency, not consequent upon curable or removable disease, defect or deformity, as to render such child incapable of making fairly normal progress in his studies. In cities, towns and other centres of considerable population, that is to say, where the number of children so affected in such community amounts to twelve or more, a separate school or schools, with specially and appropriately qualified teachers shall be provided by the school authorities for such children.

192. No child shall attend school without being at least once successfully vaccinated against small-pox, and to attain this it shall be the duty of each Medical School Inspector to vaccinate each school child free of charge in his medical school inspection area, not already so vaccinated, as shall apply to him for that purpose. For such purpose he shall be supplied, free of expense, with an adequate quantity of vaccine for smallpox from a reputable maker of such material by the sub-district Board of Health in whose sub-district his said area is situated, which vaccine shall be paid for out of the funds of the said sub-district Board. It is recommended that such vaccinations be mainly done during the mid-summer or mid-winter school holidays and that a stated place and time (a number of days or weeks as may be commensurate with the probable number of children to be vaccinated) be set apart for such vaccinations and publicly announced at the expense of the said sub-district Board. Such successful vaccination, whether done by the Medical School Inspector or by some other qualified medical practitioner, shall be, in each case, certified to by the operating practitioner, at a date not earlier than one week from the time of the vaccination. Such certificate shall be held to be prima facie evidence of such successful vaccination by all school authorities of the Province, and by all health officers duly appointed under the Public Health Act of 1918 and the regulations thereunder.

193. The foregoing regulations respecting acute communicable disease and notifiable disease shall apply to all teachers and principals of schools, as well as to the children attending said schools.
