

BAD COLD LEFT HIM WITH BRONCHITIS

However slight a cold you have you should never neglect it; if you do it can have but one result. It leaves the throat or lungs, or both, affected.

Bronchitis is one of the most common afflictions of a neglected cold, and neglected bronchitis the most general cause of consumption.

Dr. Wood's Norway Pine Syrup is just the remedy you require to cure the bronchitis. It does this by loosening phlegm and mucous, and stimulates the weakened bronchial organs, allays irritation and subdues inflammation, soothes and heals the irritated parts and thus prevents it becoming chronic.

Mr. R. P. Sundblad, Francis, Sask., writes: "I had a very bad cold which left me with bronchitis. I tried several cough remedies and oils of all kinds, but they all failed. At last I got Dr. Wood's Norway Pine Syrup and after using two bottles I have never had a sign of bronchitis since. I therefore can honestly recommend it for coughs and colds."

Don't accept a substitute for Dr. Wood's. The genuine is put up in a yellow wrapper; 3 pine trees the trade mark; price 25c. and 50c. Manufactured by The T. Milburn Co., Limited, Toronto, Ont.

PLOWING NOW IN ONTARIO

Toronto, March 30—In at least one part of York county farmers are already on the land. If there is no break in the weather, it is probable that seeding will be under way in less than a week throughout the southern section of the county. It is many years since farmers have been able to commence spring work so early, and it is said that in the last twenty-five years no work on the land has been done in March.

Yesterday Harry Shepherd, a farmer living near Lambton, ploughed without difficulty a considerable section of one of his fields.

Women have an unspoken reason for pitying a man during a convalescence—the poor thing can't knit or crochet.

THE WONDERFUL FRUIT MEDICINE

Every Home in Canada Needs
"FRUIT-A-TIVES"

To those suffering with Indigestion, Torpid Liver, Constipation, Sick or Nervous Headaches, Neuralgia, Kidney Trouble, Rheumatism, Pain in the Back, Eczema and other skin affections, "Fruit-a-tives" gives prompt relief and assures a speedy recovery when the treatment is faithfully followed.

"Fruit-a-tives" is the only medicine made from Fruit—containing the medicinal principles of apples, oranges, figs and prunes, combined with valuable tonics and antiseptics.

50c a box, 6 for \$2.50, trial size, 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa, Ont.

INFORMATION CONCERNING THE BROODING OF CHICKS

(Experimental Farms Note.)

Which is it to be, hens or incubators? If less than 100 chicks are to be hatched it is not generally considered advisable to buy an incubator, but if more than that number are wanted it is almost a necessity to have an incubator. If hens are used, select only birds that appear to be determined to set and are not clumsy or nervous on the nest. Do not allow hens in the same pen with setters. Be sure that your hen is perfectly free from all vermin and see that she has a supply of fresh water and some whole grain every day.

If artificial methods are used, a well ventilated cellar with a fairly even temperature makes a suitable location for the incubator. But a well-made machine of a well tested make. Study the general directions sent with each machine and have it started several days before trusting the eggs to it.

The first essential of a good hatch whether under hens or in incubators is to have eggs from healthy, vigorous breeding stock. The fresher the egg the better chance of a good hatch. Select only eggs of a normal size, discarding all rough, uneven, thin shells or any peculiar or abnormal shape. Do not allow the eggs to become chilled before being set. Give the hens or incubators a fair chance with good hatchable eggs and under most conditions they will produce good healthy chicks.

To be successful in the brooding and rearing of chicks requires constant care and attention to details. If chicks are hatched by hens, let the hen remain quietly on the nest until the chicks get so lively that they insist on leaving it, then remove the hen with her brood to a coop previously prepared for her. All coops should be thoroughly disinfected before use each season and also between broods.

A hen should be given no more chicks than she can keep comfortably warm. The artificial method requires a brooder so made that it will be possible to produce and hold heat enough to provide for the comfort of the chicks in any weather, easily and well ventilated. The chicks should be left in the incubator until perfectly dry and great care must be taken to avoid chill in changing them to the brooder. The brooder must be almost the same temperature as what they were accustomed to in the incubator for a start. Extremes of heat or cold are very disastrous.

Chicks require no food for 48 to 60 hours after being hatched as a chick when it leaves the shell has a sufficient

"Money makes the mare go", remarked the quotationist.

"Not when Charley bets his money rejoined Mrs. Torkins with a sigh."

"You must give up coffee and—"

"I never drink it doctor."

"And stop smoking."

"I don't smoke."

"Humph! that's bad. If you haven't anything to give up, I'm afraid I can't do much for you."

ient supply of nourishment to last it for several days. Feed small quantities at a time and often during the first two weeks. Dry breadcrumbs slightly moistened with milk, rolled oats, pinhead oatmeal and finally cracked mixed grains may be allowed but all changes should be made gradually. Give them plenty of green food and place grit, water or sour milk where the chicks will have free access to it. Self feeding hoppers containing cracked grains and dry mash are the best means of feeding the growing stock while on a good grass range.

N. B. HENS KEEP UP RECORD

The Dominion Experimental Farms are conducting Laying Contests at Six of their branch farms in the various provinces, as well as at the Central Experimental Farm, Ottawa. No contest is held in New Brunswick but breeders from this province have entered eight pens in the contest at the Experimental Farm, Nappan, N. S.

Contests began Nov. 1st, 1919 and run for 52 weeks. At the end of the 12th week (last summary available) the average production per pen at Nappan was greater than at any other of the branch farms, its nearest competitor being Brandon, Man. It was, however, consistently lower than the average production at the Ottawa contest. But if the average of the eight New Brunswick pens were compared with the average of the Ottawa contest New Brunswick had a lead of 7.5 eggs per pen.

The report of the 20th week (ending March 19th) shows New Brunswick pens occupying the first five places also eighth, ninth and thirteenth for the total eggs laid to that date. For the weeks production only the eight New Brunswick pens occupied the first eight places except that one other pen tied with one from New Brunswick for third place.

All except one pen of the New Brunswick entries are Barred Plymouth Rocks of strains imported by the Poultry Division of the Department of Agriculture. Their record indicates that they are equal to stock of the other provinces in winter egg production. There is no longer need of sending to the upper provinces for high egg producing stock.

The Cause of Heart Trouble

Faulty digestion causes the generation of gases in the stomach which inflate and press down on the heart and interfere with its regular action, causing faintness and pain. 15 to 30 drops of Mother Seigel's Curative Syrup after meals sets digestion right, which allows the heart to beat full and regular.

INTERESTING NEWS FOR WORKING MEN

An Article Well Worth
Your While to
Read.

This is a nerve-racking age—not a man in an office or behind the counter striving hard to get on in the world, that does not feel the strain.

If nerves are in order, a man is strong, eats and sleeps well. Unstrung nerves means weakness, worry, sleeplessness and a general decay of bodily strength.

They trust to luck and that kind of thing, instead of taking Ferrozone for a few weeks when they feel dull in the morning, or when they sleep poorly or lose appetite.

Ferrozone quickly brightens up the mind. It creates an appetite and improves digestion. Ferrozone makes blood, quiets the nerves, makes muscle like steel and induces refreshing sleep.

Ferrozone is a body builder, thousands have proved it. If you are sick or out of sorts, use Ferrozone and enjoy the splendid health it so surely brings.

Permanent in its results, the greatest health-giver in the world is Ferrozone. Because nourishing and perfectly harmless, all can use it, even weak men. At all dealers. Get Ferrozone at The Catarrozone Co., Kingston, Ont.

HARD TO TELL WHO ARE REAL PROFITEERS

One of the vexed question of the time is how to deal with what is called "profiteering." Indeed, there is a preliminary question—What constitutes profiteering? What profit may a merchant or manufacturer have on the goods he is offering for sale? There is much to be said in favor of freedom of trade in such things—of the right of the seller to take his profit or bear his loss as one or the other may arise under the inevitable laws of demand and supply. Restraint of that right, it is argued, removes the incentives to business activity and in this way checks production. That is an argument which has the weight particularly in the case of the foodstuffs which the farmer produces. In no other class of products do the high prices strike so directly at the consumer and arouse his severe criticism. But in many instances in which enquiry has been made the farmer has been able to show that his profit is not excessive. He claims that any restriction on his freedom would cause him to cease producing. The old adage respecting the leading of a horse to water, but not making him drink, is held to apply. "You may restrict the farmer's price, but if you do he will not respond to the world-wide call for abundant production." After his experience in the work of the Board of Commerce, Mr. Robson, the chairman, who has just retired seems to have reached the conclusion that the fixing of prices is not feasible.

Admitting the force of the arguments thus used in favor of freedom in buying and selling the public will have to hesitate to accept the doctrine without reservation. Especially in the case of the supply of what may be called necessities there will be, in the mind of the consumers at all events, a feeling that there ought to be some machinery to protect the public against excessive prices. In England in many respects the wartime restrictions on the freedom of trade have been much more severe than any that have been applied in Canada, and now after the war many of these restrictions remain. An amusing illustration of price control occurred a few days ago in the famous scholastic town of Eton. The boys who attend the world-famed public school are not usually of a class to whom a few pence are important. But there is at least one father of an Eton boy who has felt it to be his duty to protect the school against the profiteer. A shop-keeper had charged a boy 2s 6d each for ties. The lad's father solemnly brought this matter before a local "Profiteering Committee" that had been established. The shopkeeper said that the ties cost him 1s 6d each, and he considered the addition of a shilling was not excessive, having regard to the troubles and delays and sometimes losses that arose in dealings with the Eton boys. The committee, however, came to the conclusion that 9d was the most that could reasonably be added to the dealer's cost, and therefore he ordered to refund 3d on each of four ties. That English father probably spent a good many shillings in getting this refund. But the constitutional objection which the average Englishman has to being imposed on was vindicated, and the public commend the father for the course.

A woman can get along better with a lazy man than with an active one, for the reason that the lazy man kinds it easier to yield than to argue.
