Fredericton, August 17, 1920.

CASCARETS

"They Work while you Sleep"

Do you feel all "unstrung"—bilious, constipated, headachy, full of cold? Cascarets tonight for your liver and bowels will have you tuned up by tomorrow. You will wake up with your head clear, stomach right, breath sweet, and skin rosy. No griping—no inconvenience. Children love Cascarets too. 10, 25, 50 cents.

A PRACTICAL REMEDY FOR DISAPPEARING FORESTS

Nova Scotia Authority Thinks the Lumber Cut Should be Reduced by One-Half—Increased Fire Protection an Important Factor—Logging Methods Should be Improved—Seedlings Should Replace Each Tree Cut Down.

To the Editor of the Halifax Chronicle Sir:—The International Paper Company, in a recent advertisement in the "American Forestry," states, "If the Canadian forests held by leases which convey all rights of property to the timber could now be regulated, and scientifically protected and operated as are the company's forests in the United States, there is ample authority for an annual increment of at least four per cent."

In the first place it would be interesting to know of any lands in the United States or Canada, either owned by the International Paper Company or anyone else, that are producing a net increment of four per cent.

Secondly, if the International Paper Company is practising scientific forestry methods on its lands in the United States, it also would be interesting to know where.

The only practical forestry, and the only way we can save the remnants of the once magnificent forests that covered this continent, is:

(1) By immediately reducing the present cut at least one half.

(2) By greatly increased fire protection.

(3) By improved and less wasteful logging methods.

(4) By planting at least six seedlings for every tree cut or otherwise destroyed, (as not more than one tree out of six planted even reaches maturity.)

To show the fallacy of the statement of the International Paper Co., it is clear that if there had been a net annual increment of even one-half of one per cent on this continent (instead of an annual growth of four per cent as claimed,) there would be more timber standing today than there was one hundred years ago.

It must be borne in mind that even if we reduced the present volume of the cut one-half and began planting the corners, a collision in our seedlings, it would entail a wait of at least fifty to seventy-five years for the maturity of the crop, while the best authorities we have in the country state that the present supply of timber in the East will be exhausted within a period of twenty-five years.

Therefore, all this idle talk about supplying our mills in perpetuity by improved forestry methods is simply pure bunkum, unless we at least

reduce our cut, at once to one-half the present amount.

This applies with double force to Canada, due to the fact that fire has done, and is doing, a far greater damage than in the United States, and from the added fact that a large portion of our wood growth is so far north that it is too small, too scrubby and too inaccessible to be available as a public supply and also from the fact that it is acknowledged that the standing supply of timber in Canada is only about one fourth of the amount still remaining in the United States, small as their supply now is.

The thought which I wish to bring out prominently is that, even if we at once begin planting six trees for every tree cut or destroyed, it will take fifty to seventy-five years for the new crop. Hence, it is necessary immediately to reduce our cut, at least one half, in order to make our remaining supply hold out till the new crop matures.

The above conclusion is based on the claim of the best authorities that we have a twenty-five year supply in the east. On the other hand, if my own opinion is correct that this supply will last not more than fifteen years, then the gap between the end of the present supply and the maturity of the new crop will be correspondingly greater.

In addition to the fire loss the loss that is being caused through the ravages of the Spruce Bud Worm and other enemies of our forests is simply appalling; in fact at the present time and during the last three or four years it has amounted to more than our loss from fire and wind.

The International Paper Company states in its advertisement, that they have holdings amounting to 4,500,000 acres that will average five cords per acre; but they fail to state the fact that of these holdings only in the vicinity of 750,000 acres are in the United States, and even conceding their own figure of five cords per acre, and their consumption of 700,000 cords per year this would only give them sufficient to supply their American mills for a period of five years.

Small wonder there was frantic appeal for the passage of the Underwood Resolution.

PROPOSED GIFTS OF U.S. COWS MAKE TROUBLE FOR HUNS

Politicians Look Upon it as a Rather Difficult Problem to Solve

Pictured by Agrarians as a Deep Laid Plot to Ruin German

Agriculture—Pretend to be Afraid of Diseases—Max

Harden's Suggestion.

(By Viggo Toepfer, staff correspondent of the Daily Mail. By Cross Atlantic Newspaper Service.) Berlin, Oct. 14. (By Mail.)—Ask any German politician what he considers the most difficult problem to be solved today, and he will declare without a moment's hesitation that of course it is the question of the American milk cows.

Little did the humanitarian American Dairy Society suspect that when some time ago they offered to the German people as a free gift 2500 milk cows they hopelessly divided an entire nation. The Prussian agrarians, who are almost as powerful under republican regime as they were during the time of the Hohenzollerns, went into hysterics and their press declared that the offer, while purporting to give help to starving German babies, was in reality a deeply laid plot of the Yankees to ruin German agriculture.

Public Opinion Favorable

Pressure was brought to bear upon the Berlin Government and all kinds of pretexts were found to prevent the acceptance of the gift. For many weeks a furious battle has been fought between the socialist organ, "Vorwaerts"

and the re-actionary agrarian "Deutsche Tageszeitung" the former maintaining that the offer should be accepted at once while the latter has discovered that American cows are suffering from all kinds of diseases from tuberculosis to Texas fever, which they would inevitably give to all the cows of Germany. The 2500 cows that had been promised became 100,000 in the agrarian papers and if the country were to be suddenly invaded by that enormous number of aggressive Yankee cows the milk must inevitably go down and the farmers of Germany would be ruined. Public opinion, however, was strongly in favor of accepting the American gift, and about a week ago the German food ministry had to announce that no difficulties would be placed in the way of the importation of the cows.

In the meantime a demand had been made on the part of the entente powers that according to the peace treaty a further instalment of German cows must be sent to Belgium to make up for those carried away from that country during the war, and a cry went up in the agrarian press that if the German farmers were now to be com-

\$166,000 INVESTMENT OPPORTUNITY CITY OF FREDERICTON 5 p. c. BONDS

The City of Fredericton will receive applications for the purchase of Bonds as listed below. These Bonds are fully exempt from City Taxes and at the prices quoted for different maturities will yield 6 P. C. (interest payable semi-annually, viz June 1st and December 1st.) The above yield plus present tax rate will show 8 1-5 P. C. on the investment as compared with taxable securities.

This is a rare opportunity, particularly to the citizens of Fredericton, for so good and safe an investment.

Bonds are in denominations of \$500.00.

pelled to give up these cows ruin was staring them in the face.

In his usual clever sarcastic way, Maximilian Herden now suggests a way out of the difficulty. Why not let the American gift go to Belgium, he says. Then the German farmers will not see the country swamped by an influx of diseased American cows and the Belgians will surely offer no objections as the quality of the American is sure to be superior to the cows the German farmers would pick if compelled to live up to the conditions of the Peace Treaty.
