"ECONOMY"

IS WHAT REALLY INTERESTS

The Home Builder

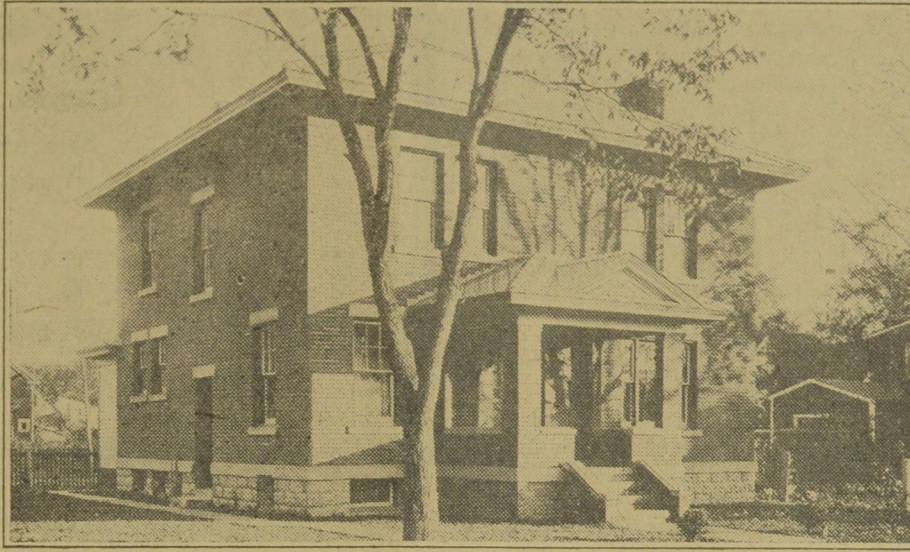

A BRICK HOUSE SELLS QUICKER
SELLS BETTER

Building with Brick is real Economy, and by using Ryan's Cherry Red Building Brick you have that economy, as the plant of M. Ryan & Son, Ltd is so situated for clay, sand, water and fuel that we are able to compete with lumber, concrete and tile. So, why gamble with inferior building material? Why take a chance on sagging walls and cracked plaster, when you know the peace of mind that comes only from the knowledge that Brick withstands ALL the elements?

Write us for descriptive matter or
call at our plant.

M. RYAN & SON, LTD.
FREDERICTON, N. B.

A MODERN FREDERICTON RESIDENCE

William E. Minue, Architect. M. Ryan & Son, Limited, Contractors.

The above residence is built of Ryan's Cherry Red Building Brick set in Black Mortar, and is generally conceded to be one of the best examples of stock Brick work in the Maritimes.

THE BRICK INDUSTRY

A WAY back in the 1870's were the days of real sport in the Clay Working and Brick Making Industry—When the men would take off their boots (if they had any) and get into the clay bins and pug the clay with their feet. The only steam power for turning out the moulded clay was a "one horse power", a big white horse that travelled in a circle whereby a few thousand brick per day were turned out.

Today the most modern machinery is used, and the Firm cordially invite to their Plant anyone that is interested in home building. A great many people

have the idea that "A brick is only a brick". But when the process is followed from the clay bank to the Crushers and then into the Pug-mill and moulding machines, thence onto the carriers into the steam-pipe driers where with 130 deg. of heat are dried for nine hours, they are now ready for the kilns where they are burned to a cherry red color taking seven days and nights with a maximum of 2,000 deg. Fahr. heat, and the last move is from the kilns onto the cars for shipment to all parts of the Province and State of Maine. Really it is very interesting. So, Come Along.

YOUR HOME

BUILD IT FOR ENDURING BEAUTY,
FIRE SAFETY, COMFORT AND
CONVENIENCE.

FOR CENTURIES, masonry has been the accepted type of construction for the well-to-do. Now the man in moderate circumstances also can have a masonry house; for the development of concrete masonry construction, with its many economies and unique advantages, has brought within the reach of every home builder a house that is beautiful, permanent and of low upkeep expense.

YOUR HOME—the one you build—must measure up to many different requirements. It must be inspiring in its beauty and proportions; it must be comfortable, conveniently arranged and healthful. And to these attributes of beauty and service must be added moderate first cost and perpetual economy of maintenance.

THESE FEATURES are outstanding characteristics of every "SCOTMAKE" Concrete Block Home.

We manufacture every type of Concrete Masonry Building units including a special stucco block, walls built with which will compete in price with stucco on wire lath, which at its best cannot be called permanent construction.

By using our special colored facing textures for both blocks and stucco that beauty of design and color found in other countries can be obtained.

INSURANCE!

WHEN BUILDING

BE SURE the Electric Wiring is properly installed so it will pass the Board of Fire Underwriters' Regulations.

BE SURE that all Flues are standard, securely built, and will not fall if the building suffers a small fire.

BE SURE the Furnace is properly installed and that the pipes are securely fastened together and cannot come apart.

BE SURE that all Pipes from the Furnace are Protected where they are nearer than 18 inches to woodwork.

BE SURE that all Furnace Pipes, where they pass through floors or partitions, are held in mortar or brick fixtures.

BE SURE that all Flues are made of brick. Do not Use Stove Pipe.

BE SURE that you do not hang Electric Light Wires on nails. Use a porcelain knob.

BE SURE and build your house warm and install a larger furnace than you need, so you will not have to drive the furnace. Overheated pipes cause many a fire.

BE SURE and Keep Your Premises Clean. Last but not Least—BE SURE and INSURE with,
