THE GREATNESS OF HENRY FORD MEASURED BY WALL STREET; HIS NUMEROUS ACHIEVEMENTS

New York, July 26—C. W. Barron, publisher of The Wall Street Journal, prints in that newspaper a remarkable summary of the scope of Henry Ford's activities. His article follows:

Henry Ford sat down with his devoted wife 25 years ago to consider the family budget. It was finally determined they could not afford turkey for Christmas.

In a little more than 20 years Henry was the richest man in the world, with a steady family income of more than \$100,000,000 a year—a figure never before attained in the history of the world.

A Lengthy Record.

When we study Mr. Ford, it is not his record as a builder of motors or his position in wealth and income he has attained that gives rise to astonishment. It is the vast sweep of his genius in the many fields in which he has proved himself the master workman.

Let us number some of his attainments:

1st: He has led the world in gasoline motor cars, making and distributing more than 13,000,000, and there are not twice that number of motor cars in the world today.

2nd: He is the largest combined individual railroad owner and operator in the world. His 600-mile railroad system he bought from near the scrap heap, rebuilt and reorganized it, and set standards unique in the railroad world.

3rd: He is one of the large ship owners and operators on the Great Lakes and on the ocean, transporting his own material to his factories by water, and shipping the products by water through the Great Lakes and to Europe and South America.

Friend of Aviation.

4th: He is today the pioneer commercial aviator of the world, developing airplanes, aviation landings, and commercial air transportation without a government backing or subsidy.

5th: He is a coal miner in West Virginia and Kentucky.

6th: He is an iron miner in northern Michigan.

7th: He leads in blast furnace work, with a model establishment, unsurpassed for organization, efficiency and cleanliness.

8th: He is setting a pace in forestry with new inventions in timber-cutting and the saving of waste.

9th: He is the second largest glass maker; produces plate glass in continuous sheets after three years of experiment, something which experts declared could never be done.

10th: He grows the flax to make 25 per cent of his linen requirements.

11th: He is a maker of linen cloth.

12th: He is a manufacturer of tires just to keep his hand on the industry while he buys for the most part of other manufacturers.

13th: He is a weaver of wool.

14th: He is a manufacturer of cotton cloth.

15th: He is a very large drawer of wire for use in his electric parts, making wire to the fineness of the human hair.

16th: He conducts one of the largest experimental work shops in the world.

A Chemist in Coal.

17th: He is a distiller of coal: takes a ton worth \$5 and converts it into coke and by-products worth \$12.50.

18th: He is a maker of benzol, 22,000 gallons of which are sold by 66 Ford dealers in Detroit every day under the name of Ford Benzol.

19th: He is a watch and clock maker

er and repairer—one of his earliest trades and business operations.

20th: He runs a motion picture laboratory.

21st: He is a maker of artificial leather.

22nd: He is a builder of storage batteries.

23rd: He is a great student and lover of birds. He roamed the country for many years with Burroughs, the naturalist, and on his home grounds are many bird homes.

24th: He is a lover of nature and everything that grows, and is now building a garden with 25,000 rose bushes.

25th: He is one of the largest farmers in Michigan, tilling 10,000 acres with men and machinery and showing net profit therefrom.

26th: He is a maker and operator of trade and engineering schools, combining studies and profitable industry for orphans or young men who could not otherwise be provided for, making them self-sustaining by their own hands.

Teaching History.

27th: He is an educator of the broadest type, righteously holding that history is largely "bunk" dealing with kings and priests and their battles to the neglect of the real history of man. He is putting a million dollars into Longfellow's Wayside Inn at Sudbury, Mass., and when his plans are fully matured, one may see the family foundation in the old farm kitchen, with its open fireplace, clock work, spit for roasting, and every appliance from butter making and candle moulding to wool spinning—the fire, the food and the shelter of our ancestors; and beside it the modern kitchen with its light, heat and power, and everything done by electrical machinery—the forces of nature harnessed in the service of man. Here is a history of man, a history that can be interestingly and practically taught.

28th: Mr. Ford's Dearborn Independent "devoted to the neglected truth" has a circulation of more than 600,000. He dominates it in policy, and therein expresses his ideas every week.

29th: He has put \$10,000,000 into a hospital at Detroit, from which physicians and patients alike may draw important lessons. Ford said to the doctors: "Tell me the cubic air space you require as a room for a hospital patient; name the things therein needed, and I will do the multiplication and engineering." There are no large wards in the Ford Hospital. For the most part patients have a single room, and in the bathroom is every appliance needed in a sick room.

The beds are on rubber-tired wheels are in movable sections, and the combined desk and table beside it is a wonder of engineering and simplicity. Should the patient desire a nurse, he has only to press a button. The nurses are for the most part outside the sick room in call of the central desk on each floor.

A World Wonder.

All the buildings are connected by well lighted passages under ground. The Clara Ford Nurses' Home just finished is a world wonder. Every nurse has her individual room and bath, cedar closet complete from automatic lights to shoe racks, desk, two rugs and two copies of old masters on the wall. Nineteen nurses are allotted one sitting room for reception of friends and there are kitchenettes with electric refrigeration, incinerators, electrical equipment, and complete outfit for home entertainment.

There may also be found here squash courts, swimming pool, and a hall for dancing and moving pictures.

There are 107 doctors who do no outside work, but 2,000 people from the outside have benefit of the Ford Clinic.

There are 647 beds and 790 employees. Everything is done for cleanliness and uplift without any evidence of the degradation or charity. It is business in hospital service, of about \$2,500,000 a year, and Mr. and Mrs. Ford furnish the capital, the engineering, and pay the deficit of about \$300,000 a year. It is everywhere Ford dominion service.

30th: Mr. Ford is in the ready-to-wear clothing, boot and shoe and meat and fish business, selling \$6,000,000 worth of food a year to his employees. He found that when he put in his minimum wage of \$5 a day the storekeepers raised their prices to absorb a part of the increase in wages.

31st: In the bookmaking field Mr. Ford is both author and publisher, and his books sell around the world.

32nd: He has set a pace in home building, and has made a model village near his works.

Position in Wealth.

33rd: The position of the richest man in the world may be classed as a distinction, a trade, or an achievement, but it is a position Mr. Ford never sought.

34th: He is probably the largest individual bank depositor in the world, although there may be larger aggregates of deposits between banks and bankers. He usually has in bank about \$200,000,000.

35th: He is a builder of hydro-electric power plants. In this field as well as in the motor field he can be classed as an engineer of distinction, worthy of his university degree.

The above 35 occupations, trades and manufacturing lines and services have not by any means exhausted the list of Mr. Ford's activities, and many enumerated above could be divided. He is a builder of locomotives and farm tractors of fame. He is a champion in skating and old-fashioned dances. He is putting the horse off the farm, and if he could succeed in his experiments for synthetic milk, he might abolish the cow, do away with farm chores, and solve the farm problem by bringing the factory and farm nearer together.

At The Zenith.

The question must naturally arise, —is Mr. Ford now at the zenith of his career, or has he new worlds to conquer?

In the motor world it is now certain that one of the great industrial struggles is before us. He has saturated the country with Ford cars. In some states two kinds of licenses are issued—one a general license for automobile operation, the other a distinct license for Fords.

It is now the field against the Ford. Other makers have come in with mass production and low prices, inviting the Ford novice to step up to a car with more artistic external appearance. But competing makers admit they cannot afford to give the price and value found in the Ford.

Autocratic Policies.

The American motor car, whatever its name, is now so comparatively safe in its machinery that competition is largely in external appearance. Although Mr. Ford has made more than 100 changes in his engine, he does not advertise these improvements, but puts them steadily into the factory and the hands of his more than 20,000 agents. He declares the public will learn their value without advertising appeal.

He will not "doll up" his cars, and still stands upon his principle "Paint it any color so long as it is black." He makes 14 styles of bodies, and will allow only two of them to be painted dark blue, or dark maroon. He will not
