Maritime Electric Co. Presents Proposition to Council for Extension

Proposes Expenditure of \$75,000 on Additional Turbine and Boiler—Wants Outside Expert Appointed to Investigate Estimates—No Action Taken by City—Police Court Improvements Decided Upon.

The City Council in committee Monday night received from The Maritime Electric Company a proposition for the extension of the present plant in Fredericton at a cost of \$75,000 and the furnishing of current at a switchboard cost of 1.76 cents. No action was taken on the communication which was ordered filed. It was decided to communicate with the New Brunswick Power Commission relative to the extension of the Musquash distribution system so as to supply Fredericton with hydro current, and the rates which would be charged.

Letter From Company.

His Worship Mayor Clark presented the communication of the company. It was pointed out in that communication by way of introduction that the source of power at the disposal of the company was not sufficient to meet expected increase in demand, that production costs were higher than they should be and that the company was seeking more power at a lower wholesale cost.

Proposed Addition.

To meet these conditions it was proposed that an additional boiler and turbine be installed at a cost of \$75,000. The estimated switchboard cost of current from the enlarged plant was 1.76 cents per kilo watt. That estimate was 1.14 cents lower than the estimated switchboard cost of Musquash current according to the reports prepared by S. R. Weston and Prof. John Stephens upon the power situation in its relation to Fredericton. That report it was pointed out estimated the switchboard costs of current from the three propositions considered feasible, as follows:—Meductic 2 cents, Musquash 2.9 cents, fuel plant 2.2 cents.

The cost to consumer under the company's proposition was estimated at 7.88 cents which compared well with the cost of 7.6 as estimated in the Weston-Stephens report. The proposed extension would lower costs and would closely approximate the figure of 4.1 cents mentioned in the report.

Outside Expert Wanted.

The communication finally suggested that he services of an outside expert be secured to investigate the wholesale rates which could be expected with the plant enlarged as suggested.

The communication which was from Vice-President Roderick D. Donaldson also referred to the intended encouragement of the use of electric current for cooking and lighting by means of special rates.

From Power Company.

Mayor Clark also read a communication from the New Brunswick Power

Company in reply to a communication relative to the use of the company's current in the event of extension of the Musquash system to Fredericton. The letter stated that on account of the contract between the company and the N. B. Power Commission it was impossible to give the information asked. The opinion also was expressed that the best system was combined hydro and steam-plant.

Architect's Fee.

In the matter of the fee of W. E. Minue, architect, for preparing plans and specifications for the proposed alteration of the Carleton Street power house into a police station, Ald. Goodspeed reported for the Administration of Justice Committee. He said that the original bill had been for \$860. The proposed alterations never had been made.

The committee was prepared to recommend that the city offer without prejudice two and a half percent on \$17,000. Ald Goodspeed said that he had the word of Mr. Minue that although he was not satisfied he would accept the sum mentioned.

The report was adopted.

Police Cells.

Ald. Goodspeed also reported on the matter of improvements at the police station. The Administration of Justice Committee by a majority vote had decided upon certain improvements. His own opinion was that more should be spent and a complete job done at once.

The report of the committee was that three steel lattice cells be installed, also one toilet and the cleaning and renovation of the premises carried out. The cost would be about \$3,000.

There was some discussion Ald. Ross taking the ground that a toilet should be installed in the cell used by women if no change were to be made in regard to it.

Finally the report was amended so as to include the installation of a toilet in that cell and was so adopted.

Lighting Matters.

Ald. Davidson reported that the Canadian Legion had agreed to the counter proposition of the city concerning installing standards and lamps along the Queen street frontage of the property. The report was adopted.

Ald. Davidson also reported on the matter of lighting the Victoria Hospital from the Pumping Station and referred to the proposal of the Maritime Electric Co. to furnish current for the Pumping Station.

This brought on a general discussion without action.

The special committee on the lighting of the Hospital was instructed to meet today.

PARENT-TEACHERS' ASSOC. OF MASSACHUSETTS TOLD CHILDREN ARE IMPROVING

"Children today are a great deal more willing and responsive while being educated and are better in every way than were their parents or their grandparents when they were young," declared Miss Mary McSkimmon, former president of the National Educational Association, at the annual banquet of the Massachusetts Parent-Teachers' Association in Hotel Bellevue last evening.

She justified that judgment on the ground that she is herself teaching children whose parents and grandparents in some instances were her pupils.

"I rejoice," said she, "that American children are growing increasingly good. Every teacher of several years' experience will agree that they are.

No Longer Rob Birds' Nests

"Boys no longer rob birds' nests as they used to, but when baby birds have no more sense than to fall from their nests, the boys will do anything possible to put them back again. They will spend their pocket money to buy milk for a stray cat and give their lunches to lost dogs."

The speaker quoted the head of the Children's Bureau at Washington as saying that child delinquency is steadily decreasing and that in Boston within the last four years it had decreased from 23 to 17 in each 100,000 children.

The speaker said the results of scientific deficiency tests among children depended largely on the conditions under which the child may be living at the time of the test; that if the subject is unhappy the test will show a low rating and if happy it may go as high as 100 per cent with the same child.

She urged that parents be made to see that children must have education fitted to their particular individual characteristics.

Lord and Lee Reply

Two other speakers thought Miss McSkimmon a bit overenthusiastic. Arthur Lord, director of research and statistics with the State Board of Education, believed wise guidance of youth would induce them to frequent art museums, and listen to better grade phonograph records and radio selections.

Joseph Lee, former member of the Boston School Committee, charged that young girls and boys attend too many evening parties and that too many girls "jump over-night from the age of 13 to 18, and so become prematurely blase."

James P. Munroe, president of the Twentieth Century Club, urged that the size of classes be kept down so that each child may receive instruction suited to it.

Miss Frances Hayes, field secretary

of the National Congress of Parents and Teachers, said there are more than 1,000,000 members of the association in the United States.

Eugene Randolph Smith, headmaster, Beaver Country Day School, also spoke. Mrs. George Whiting presided.

Sin to Thwart Curiosity

"When a child wakes up howling and there are 15 minutes until feeding time, clock schedule, it is all nonsense to let the child cry until the 15 minutes are up," according to Dr. Abraham Myerson, who addressed the association at the afternoon meeting.

Dr. Myerson talked on "The Pre-School Child."

Children are democratic, he said; it is several years before a child begins to differentiate between the washed and the unwashed, the poor and the rich. The earliest possible social relationships are important, and "a solitary life is dangerous mentally," he declared.

When the child's curiosity is aroused and he tires his parents with the eternal "Why?" it is the parent's opportunity to stimulate the child's intelligence.

"Curiosity is the mother stuff of intelligence," said Dr. Myerson. "The further the curiosity reaches out the more intelligent the person. It is a cardinal sin to thwart curiosity."

He said the great principle to remember is to treat every child as an individual.

Miss Chloe Owings of the American Social Hygiene Association spoke at the conference on that subject.

Other speakers were Mrs Edward C. Mason, Dr. Henry B. Elkind of the Massachusetts Society for Mental Hygiene, Dr. Merrill E. Champton of the State Department of Public Health, Miss Frances B. Mayer, Carl Schrader of the State Department of Physical Education, Mrs. Herbert V. Neal, Miss Lillian Poor, Burr F. Jones, Mrs. William Tilton and Dr. Helen McGhillcuddy.

QUEEN MARIE LIKES CANADA
The Queen of Roumania expressed herself as delighted with the warmth of her welcome to Canada and paid a mother's tribute to the women of Canada who had given their sons to the Allied cause during the Great War.

TENDER MEMORY AWAKES.

(In an article on "How and When to Punish Your Child" the Hygiene Magazine recommends "a sharp rap on the hand or the calf of the leg.")

I remember I remember the place where I was spanked
Though the mists of time unfold it like a curtain
But it wasn't on my hand or the calf of my leg—
Of that much I am very very certain.

"He believes in turning the other cheek."

"Preacher?"

"No, barber."

Sour Stomach

"Phillips Milk of Magnesia"
Better than Soda

Instead of soda hereafter take a little "Phillips Milk of Magnesia" in water any time for indigestion or sour, acid, gassy stomach, and relief will come instantly.

For fifty years genuine "Phillips Milk of Magnesia" has been prescribed by physicians because it overcomes three times as much acid in the stomach as a saturated solution of bicarbonate of soda, leaving the stomach sweet and free from all gases. It neutralizes acid fermentations in the bowels and gently urges the souring waste from the system without purging. Besides, it is more pleasant to take than soda. Insist upon "Phillips."
