**5,000 MONOCLES
GREET SIR AUSTEN**

London, Nov. 5.—Sir Austen Chamberlain's custom of wearing a monocle has received the indorsement of 5,000 Glasgow University students. All appeared with monocles when Sir Austen was installed as lord rector of the university.

Fritz Kreisler has said it in a nice way: "People do not understand that jazz is meant to be an artistic caricature."

H. P. HOVEY OF STANLEY PRESIDENT OF YORK & SUNBURY TEACHERS' INSTITUTE

(Continued From Page Eight.)

A drill on the use of "was" and "were" followed, and included a game on the use of "were" instead of "was" in suppositions. A Thanksgiving story followed and then a class song, all teaching expression most effectively. Quotations were then given by the pupils.

The lesson was exceptionally well taught, and like the other two lessons, was of great benefit to all present.

Prin. Hughes appreciated the three lessons very much. Such lessons were much needed. More time should be spent upon English, much attention should be given to reading.

The President praised all three papers and urged the Primary Teachers to join in the discussion.

Prin. Haviland P. Hovey spoke in the same strain. The discussion was continued in an appreciative strain by Mrs. Mabel Peacock and Miss Irene Fitzpatrick.

The Curriculum.

A discussion on "Teachers' Difficulties" was led by Prin. James A. Hughes.

The teacher must have a knowledge of child nature and good methods and ability to organize and discipline. His duties included care of school appliances, grounds, etc. He must obtain obedience and teach self control, good manners, conscientiousness and a sense of duty. One of the many difficulties of teachers of Grades VII and VIII was the difficulty of covering the curriculum required for High School entrance examinations, which demanded a review of all the first eight grades. The pupil must know all the Arithmetic of the Text and many mental rules, also bookkeeping by single entry—enough for first class entrance to Normal School. He must know 100 pages of the High School Algebra and have covered some 1500 questions. He must know all the geography and British and Canadian history and grammar and the eight drawing texts (including 24 geometrical problems), all of which is equal to the requirements for First Class Normal Entrance. He must be a good writer, must know how to spell all words in all his texts, and know 100 pages of the Latin text. He must know as much civics, science and health as a candidate for First Class Normal Entrance. The requirements for science are limitless. He must know everything about common minerals, plants, insects, birds, animals, etc. In fact in everything but Algebra and Geometry the fourteen year-old child must, to pass the High School Entrance examination, cover as much work as the applicant for first class entrance. To top off, he must cover a hundred page book on fire protection, learn music, take physical drill write at least three sets of examination papers during the year and observe Arbor Day, Public Examination Day, etc. The text books are, with possible exception of one or two good, but the teacher cannot possibly cover all the course laid down for Grades VII and VIII before the pupil is fourteen years of age, even by lengthening the day by two hours. He suggested that (1) some of the arithmetic should be passed on to High School; (2) Algebra be taken from Grade VII and reduced from VIII; (3) much of the Nature Study course be eliminated, the whole cut down with some necessary changes to what is in Dr. Britain's time; (4) more time to be put on English and on Canadian geography.

Discussion.

Miss Pearl Ross and Prin. Nevers agreed with Mr. Hughes. Mr. Nevers wished the present geography to be revised. Prin. Close spoke along the same line. Too much was required in History.

The President thought that most any pupil should be able to make 50 per cent on his nature paper without special preparation, if he were in the habit of observing.

Prin. W. M. Burns said the exceptional pupil might easily pass in

the nature course, but the majority of the pupils had to be considered. It seemed to him that the History text paid too much attention to wars and too little to commercial and economic progress. The texts of history and geography should be revised. He had noticed that First Class Entrance arithmetic was no harder than that for High School Entrance. The Grade VIII work had gone out of mind. He agreed with Mr. Hughes that there was too much required for Grades VII and VIII. He also complimented Miss Ross on her lesson in Arithmetic the day before.

The President hoped that resolutions on this matter would be presented to the Text Book Committee. The Rural teachers had a difficult task.

Special City Course.

Inspector Fox said that there was a definite course laid down for Fredericton Grades by the City Board.

Secretary Hanson said that the course of instruction, some years ago had not definitely apportioned Nature Work to the different grades, and that the Fredericton Board had made such appointment but without eliminating any part.

Inspector Fox said that N. B. and N. S. had the best school systems in Canada. In P. E. I. classics are emphasized, in N. S. Mathematics. It would be hard to get a text book committee to agree on texts. He thought the course of today was better even on science than it used to be.

Prin. Wood congratulated Prin. Hughes on his address. He saw difficulty in getting views before the Text Book Committee. If the Teachers' views could not be made effective elsewhere, they could be expressed through the medium of the N. B. Teachers' Association.

On motion of Principals Wood and Stuart, it was unanimously resolved to have Prin. Hughes' address published in full in the press.

In discussing the High School entrance examinations, Prin. Stuart said he had generally found good marks in Science but poorer work in Mathematics.

Secretary Hanson

Secretary Hanson said that he was able to corroborate what Mr. Stuart said about the Science marks in general. Usually Arithmetic and History caused most failures. The reason for failure in History was not easily apparent as that subject in Fredericton schools is well taught. In Arithmetic it seemed that the present assignment particularly for Grades VI, VII, and VIII, was too severe for the ages of the pupils involved. Certain work now assigned to Grade VI, should undoubtedly be deferred till VII, and certain chapters given VII, and VIII would be much better understood if deferred to High School. The present assignment of Arithmetic demands that teachers give an undue portion of time to this subject, with result that the Language and subjects which deal with the imaginative side of the child's nature have far too little time given to them.

FIR TREE USED AS HOUSE BY A MOTORIST

Montesano, Wash., Nov. 5.—A tour in a Douglas fir log is under preparation by E. W. Wade, who is making an automobile body from the giant tree. The apartment plan calls for a combination bedroom and living room with two folding beds, two clothes closets, a combined kitchen and dining room and a china closet. The log house is to be electrically lighted throughout and have electric cooking appliances. The stump measured nine feet four inches across and is now 16 feet long weighing 4,250 pounds.

When complete the house goes upon a truck and trailer.
