## THE CANADIAN FORESTRY CONVENTION OPENED HERE TODAY WITH GOOD ATTENDANCE

(Continued From Page One)

have in the Province 18,000 square miles of forest land of which 11,000 square miles is owned by the Government, that is, it is the property of the people of the Province. It has given them an annual revenue equal to better than One Million Dollars a year, surely it is well worth protecting and the chief hazard is FIRE. In the past the bulk of the forest fires have been caused

MR W. E. GOLDING  
President of the Canadian Forestry Association.

by human agencies and it will only be when these fires are regarded in the minds of all the people as criminally wrong and entirely preventable then and then only will they be eliminated from the forest. There requires development of a public consciousness that will demand strict accountability for carelessness with fire in the forest.

### Leads the Empire

Referring to Canada as a whole three-quarters of the land area is incapable of successful agricultural production and of this non-agricultural area about one half can be made to produce timber crops. Canada is the principal source of softwood supplies in the British Empire; in Europe as a whole the annual consumption exceeds the growth and in the United States of America the annual cut is estimated at four times the annual growth. Russia and Siberia have immense forest resources but they are in a very large extent inaccessible. Canada must therefore be prepared to meet an ever increasing demand.

This Convention will only be a success provided we individually carry from it the conviction that we are going to do all we can no matter what our position may be to teach the creed of the protection of our forests from fire.

Public opinion is asking today for something more than the general well being of the timber and pulp and paper industry, it knows that our forests are vitally related to outdoor recreation, the enjoyment of nature and the preservation of wild life.

### A Great Country.

We have in Canada one of the greatest countries in the world; we have in our timber lands in Canada a wonderful asset which will from year to year increase in value but we have got to protect that asset and providing the fire menace is controlled the public need not worry about replanting. The value of our sawn lumber in the past four years produced in Canada is equal to all the gold produced in Canada since Confederation. The Pulp and Paper industry has produced more wealth for this country in the past three years than all the gold mines since the Dominion was established. When a man is mined it gives out but when a forest is properly cared for it goes on forever.

I now have the honor to call on His Honor Lieutenant Governor Todd.

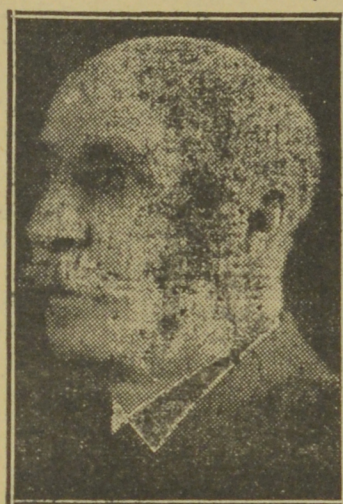

### GOVERNOR TODD

His Honor the Lieutenant Governor who spoke next said:

It is indeed a pleasure to be present and welcome you to this Convention to our Province and this Capital. We are honored in having

your conference here and our citizens enabled to learn from you the latest and best advances in practical forestry.

To New Brunswick especially are matters vital to the results of good forestry important for the Province ranks fourth in timber production, among the Provinces of the Dominion and it is second largest of our industries. The per capita acreage of forest land is said to be 32 acres and these lands accessible, and near to our great and many water-courses. Our Province bounded on two sides by water, with a coast line of some 600 miles makes it especially well situated for the shipment of its timber products, which cover about 70 per cent of its total area to draw from. With the vast acreage of Crown Land Timber which makes up the most of the territorial revenue of this Province

LIENT. GOVERNOR TODD  
A Speaker at the Canadian Forestry Convention.

there is the need of the wisest conservation of our timber lands, of the best fire protection and a system of cutting and saving of waste, that will enable us to pass on to the next generation a heritage made rich by our care and guardianship. Your Association is doing a grand work, is giving zeal and energy and best hope in the future to one of the very greatest of industries of this Dominion. I trust your deliberations, the interchange of thoughts and study among you and your resolutions may all before the best advancement and maintaining of this great industry.

### HON. C. D. RICHARDS

Hon. C. D. Richards, acting Premier and Minister of Lands and Mines in extending a welcome to the delegates, spoke as follows:

"Mr. President, Your Honor, Ladies and Gentlemen:

It is my privilege and at the same time a very great pleasure, on behalf of the Province of New Brunswick, to extend to all attending this Canadian Forestry Convention a most cordial welcome—to our distinguished guests from our sister provinces and from the neighboring republic on the south of us, to the members of the Association, and to all our visitors generally. We appreciate the consideration and thoughtfulness of the Directors of the Association which prompted them to hold this convention of the Association in our province. It is obvious that throughout Canada generally much more thought and attention is being given during these latter years to the value of our forests in relation to the economic life of our Dominion. We realize more fully the value of well considered and scientific administration in the development of our forest domain.

It is pleasing to note such a large representation from among those who are dealing in the practical business of lumbering and other allied industries, as well as from those who are more directly interested in the preservation and continuance of our forests because of their scenic value, their relation to our wild life and recreational opportunities. This splendid gathering is extremely gratifying to those who have had charge of the organization for the convention.

### Our Own Province

May I say a word about our own province. Since its earliest days the forests of New Brunswick have contributed largely to its economic development, and this condition will, we believe, continue for many years to come. Our lumbering and allied industries rank second only to agriculture. Of the 28,000 square miles within our boundaries about 18,000 is forest area, and of this practically 11,000 is today Crown land, that directly is held by the Province. These figures in themselves indicate the very large proportion of forest areas as

well as the direct interest of the province in our Crown lands. As in the provinces of Quebec and Ontario a very large proportion of our provincial revenue is derived from our Crown lands.

### Pulp and Paper

Recent years have witnessed throughout Canada the gradual development of the pulp and paper industry. In Ontario and Quebec that development has been extremely marked and rapid. In New Brunswick today we are in the midst of a transition period from the saw mill to the pulp and paper mill. Considerable development in this direction has already taken place and we have today one paper mill and four pulp mills in operation. We are glad to be able to say, however that within a short period we expect to see a very considerable expansion in these industries. New plants will be established on the Restigouche, on the Miramichi and expansion will take place on the Saint John. This means the investment of millions of capital in these industries. In short we confidently expect a very substantial development in the pulp and paper industry. I appreciate, of course, the features which must necessarily be considered in relation to this development, namely the preservation and conservation of our forest assets. I am glad to note that those who are associated with us in these developments and who are represented at this convention are equally conscious of these features.

### Forestry School

There is one other subject to which I should refer. For about twenty years we have had in this province a Forestry School, located in this city as a Faculty of the University of New Brunswick. This school has done excellent work, and has a recognized standing throughout Canada. Many of its graduates occupy positions of responsibility in various portions of the Dominion. This school has in the past been carried on under difficult conditions, with entirely inadequate accommodation as well as equipment. Realizing this fact, the legislature at the last session made provision for a new Forestry Department in a new building at the University of New Brunswick. Plans are now being prepared and it is expected that construction will begin in a short time.

Having regard to the subjects to which I have referred, I feel that this convention of the Canadian Forestry Association in New Brunswick this year is a happy and appropriate occasion. I trust that it will be a source of inspiration and stimulus not only to us in the Province, but to all who attend.

To our visitors from outside the province may I say again, that we gladly welcome you to New Brunswick. We will endeavor to see that your visit will be pleasant as well as profitable and we hope your experience will be such as to bring you back again."

Mr. Robson Black, Manager of the Canadian Forestry Association in an-

swer, replied to the address of welcome in most suitable terms.

Dr. C. D. Howe, Dean of the Forestry School of Toronto University, delivered an address on "Some of Our Forest Problems," which will be published in full in the Mail tomorrow.

A tight close of the afternoon session the delegates will be entertained to a drive about the city, and at seven o'clock will be entertained to dinner at the Fredericton Experimental Farm.

## BEARS DESTROY POSTERS ON THE GAME REFUGE

(Continued from page eight)

seen at Adelaide and Armond Lakes, which are separated only by a ridge or "horseback" which in places is only 60 feet wide, although Lake Armond has 15 feet higher elevation than Lake Adelaide on water level.

### Fishing Very Good

From Victoria Lake a hike was taken via Lepreau River, Mosquito, Duck and Hurd Lakes to the lower line of Refuge, thence to the Head of Flowage on Lepreau. Fishing parties who were interviewed at different places reported fair catches, although the water was rather high in the lakes for good fishing. From Lepreau flowage the trip was continued by the Lepreau River to Crystal and Rocky Lakes, thence along the boundary and return to Victoria Lake Camp.

Signs of moose were quite plentiful, although not many animals were seen. Deer did not appear to be very numerous in the sections travelled, but reports showed them plentiful near the settlements.

Signs of prevalence of bears were quite evident generally, but partridge appeared to be scarce, only one spruce hen with a couple of chickens being seen in four days travelling. The continued wet weather this spring, Mr. Ritchie says, seriously affected the hatching, and young partridge.

Conditions on the Game Refuge are good, Mr. Ritchie said. The boundary lines are well blazed and painted with white. Special fishing regulations are being well observed, calling for a one dollar permit for the season, May 1st to August 31st.

## MANY SALMON ANGLERS COMING THIS SEASON

(Continued From Page Eight.)

adorns the wall of his office. Mr. McGrann promptly placed his car and chauffeur at Mr. Wheeler's disposal and he was enabled to take in the sights of Gotham and surrounding country. Before leaving for home he was assured by Mr. McGrann that he and some of his friends would be at Hart's Island pool again this season. Mr. Wheeler called on a number of other anglers who had fished the Hart's Island pool, and not only were they glad to see him, but entertained him most lavishly.

### To Erect Another Camp

Mr. Wheeler, along with his brother, Roland Wheeler, erected a bungalow camp last year overlooking the salmon pool, and had it occupied nearly the entire season. They have ordered the lumber and plan to start work tomorrow on another camp of similar design. They have good sites for three or four more and it is their intention to build and equip them just as soon as the business warrants it.

Mr. Raymond Currie, angler's guide of this city, has two large parties booked for July at the Hart's Island pool. Dr. G. Holden, of Yonkers, N.Y., who fished the pool last season is coming back with a party of friends next month for a longer stay. A New York millionaire, recommended by a lady friend who fished at the pool two years ago, has made reservations with Mr. Currie for July 10th. He will be accompanied by a friend and their wives who will make the trip with them. They plan to make their headquarters in Fredericton and make daily visits to the fishing grounds.

### Condition Improved

Mr. Norman E. Egan, of this city, who has been confined to his home in York street with a serious illness is now improved in health and his friends now look for his complete recovery.
