# **IN.Y. DOCTORS FINISH SURVEY OF DISEASE**

New York, Oct. 9-In a survey just completed in New York City it has been demonstrated that the majority of cases of tuberculosis meningitis are due to direct exposure to active tuberculosis in the household and not to infected milk.

Experts in the department of health had charge of the study and altogether 11 cases of tuberculosis meningitis distributed in the major hospitals of the city, were under observation. In about half the cases the diagnosis was corroborated by the finding of tubercuel bacilli in the spinal fluid. In the other half, guinea pig inoculation and post-mortem observations left no doubt as to the correctness of the diagnosis.

"That tuberculosis miningitis in these children," says the statement of due to direct exposure to tuberculosis in the household, can be assumed tories, that almost all cases of tubergin. Cases in which the bovine bacillus are found are rare, indicating that in not the conveying medium."

> **BEGIN TO PAINT** WHEN TOO YOUNG

London, Oct. 9-The British public school boys have just returned from their Canadian tour.

Questioned as to their impressions of the girls of Canada, one declared :-"The Canadian girls are much younger than they looked, because they commence to paint and powder while still at college."

He added: "They are very nice to go out with a day, but I wouldn't like to marry any of them."

"Well, what now?" "Do golfers go six months with out sleep in Greenland?"
