PORTES GIL, MEXICAN PRESIDENT, WON DISTINCTION AS GOVERNOR BY MANY ECONOMIC REFORMS

(By Jack Starr-Hunt in New York Herald-Tribune.)

Mexico City.—The rise of Emilio Portes Gil to the provisional Presidency of Mexico has been rapid. An enormous capacity for hard work is perhaps the chief characteristic of the newly designated chief executive. It is largely due to this attribute that Senor Portes Gil attained the office at the comparatively early age of thirty-seven. He will be the sixty-eighth President of the republic.

Before he was designated provisional President to succeed President Calles after December 1 by Congress and the Chamber of Deputies, Portes Gil was in the shadows of the limelight of publicity and political glory. He was known only as a good man and a hard worker. But there is general satisfaction throughout Mexico over the choice of the Legislature. Business men are especially gratified that civilian, and not a military man, has been named. Many forecast an era of prosperity during his regime.

Emilio Portes Gil was born in Ciudad Victoria, the capital of the State of Tamaulipas, on the northeast coast of Mexico, on October 30, 1891. His father died in his early youth, but his mother is still living. Portes Gil was educated in the schools and colleges of his native city. He studied law in Mexico City, receiving his diploma in 1914. He married early in his career and has a young daughter. In 1915 he became judge advocate general during the service of Obregon as Secretary of War. Later he was judge of the first instance and magistrate in the Superior Court of the State of Sonora.

Senor Gil had a hand in enacting Mexico's present constitution. He was a member of the Constituent Congress of 1917 which enacted this legislation. He was elected to Congress four times serving in 1919, 1924 and 1925 as well as in 1917. In 1920 he was appointed provisional governor of Tamaulipas and elected constitutional governor of that state for the 1925 to 1929 term. But in view of the difficult situation that arose as a result of the Obregon assassination he accepted the office of secretary of state.

Won Praise as Governor.

Portes Gil is looked upon as one of the best governors Tamaulipas ever had. His first executive act was to close the gambling houses that flourished in Tampico, the great oil port of Mexico, and he vigorously prosecuted gaming throughout the state. He enacted laws on social and labor matters and a measure relating to the freedom of the press. This latter law is the only one of its kind in force in the world in that it specifies that journalists accused of violations of this statute shall be tried by members of their own profession. Schools of agriculture and schools of laborers were established by him.

The new provisional president neither drinks nor smokes. He is a keen lover of sport and a champion of the cause of athletics. A few months after he became governor of Tamaulipas he had enacted legislation prohibiting the sale of liquor in the small villages and camps. As a result of his efforts more than 100 saloons were closed, and no permits have been issued for the opening of others. The statistics of Tamaulipas show that as a result of this legislation delinquency in that state has been greatly decreased.

AIMEE FINDS BAR BENEATH ALBERT HALL

London, Oct. 10.—Discovery of a flourishing bar, well stocked with Scotch, beer, and wine, in the basement of Albert Hall and almost directly under the pulpit from which Mrs. Aimee McPherson spoke last night, failed to disconcert the California Evangelist.

When informed that the open bar was running beneath the auditorium, Mrs. McPherson smiled.

"How interesting," she said. Mrs. McPherson's silver voice appealed to a packed hall again last night, enabling her to "plead to best the band for Jesus," as she expressed it.

There were 40 converts last night out of the audience of 7,000 persons and the members of the Foursquare Gospel expressed disappointment despite the fact there were less than half that many Sunday night.

FRUIT PUNCH

One cup water, 2 cups sugar, 2 cups sugar, 2 cups strawberry syrup 1 cup tea infusion (2 teaspoons to 1 cup water), 1 cup maraschino cherries, 1 cup grated pineapple, juice of 5 oranges, juice of 5 lemons. Make syrup of sugar and water. Add remaining ingredients and let stand 30 minutes. Add enough water to make six quarts.

Texas girl is suing a dentist for a gob of money because he pulled the wrong tooth. Evidently there's a danger line for dentists, too.

ONE HUNDRED SCIENTISTS TO TELL OF NEW USES FOR COAL

Pittsburgh, Oct. 10.—Whether recent scientific discoveries in the use of bituminous coal can help the coal industry to save itself from threatening ruin is a question that may be partially answered here next month when scientists and engineers of twenty countries meet at the second international conference on bituminous coal. The meeting will take place during the week of November 19, under the auspices of the Carnegie Institute of Technology.

Recent disorders within the ranks of the strikers themselves in the Pittsburgh district have again focused the attention of capitalists as well as scientists and engineers upon the increasing ills of the bituminous coal industry. Capital nor labor cannot agree, it is pointed out, and the miners themselves are confronted with internal disorganization. But while the coal mine operators have been trying to solve their labor difficulties, scientists all over the world have been making rapid progress in the improved utilization of bituminous coal.

When Dr. Thomas S. Baker, president of the Carnegie Institute of Technology, who organized the first international conference on bituminous coal two years ago, calls next month's congress to order his audience will include representatives of the world's latest and most important discoveries in the better use of the product of an industry which has figured in eighteen months of court litigation, in-

junctions, United States Senate investigations and much exchange of inventive between capital and mine labor.

More than a hundred scientists, many of them with world-wide reputations established because of their discoveries in coal research, will address the conference on a wide variety of subjects. All of the topics, however, are concerned with improved utilization of coal. The production of gasoline and other spirits from coal, the use of pulverized coal in internal combustion engines and in ship propelling engines, the production of synthetic rubber from coal, the manufacture of artificial fertilizers from coal, the propelling of automobiles by means of compressed gas packed in small tubes placed at the side of the car, the piping of coke oven gas from the mouth of the mines to cities hundreds of miles distant and the use of coal tar and other by-products of coal are only a few of the subjects that will be discussed.

Germans on Program.

In each case, it is announced, the subject will be discussed by the world's leading authority or authorities. For instance, according to the program plans, the liquefaction of coal, which was an important topic at the first conference, will be treated by Dr. Friedrich Bergius, of Heidelberg, Germany, who is credited with having made further advance in producing petroleum from coal than any

other chemist. About a year ago, it is recalled, an announcement was made that the I. G. Farben Industrie of Germany and the Standard Oil Company of New Jersey had made a contract involving the utilization of a modified Bergius process for the production of gasoline in this country.

The use of pulverized fuel will be discussed by Rudolph Pawlikowski, another German, who is the inventor of a new type of internal combustion engine that uses pulverized coal instead of gasoline or low-grade oil. Instead of gasoline or low-grade oil.

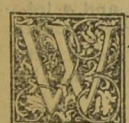

PPINEAPPLE SPONGE

2 tablespoons gelatin
1-2 cup cold water
1 cup juice canned pineapple, sugar to taste
1 cup hot water
Juice of one half lemon
Soak gelatin in cold water and dissolve in hot water add lemon juice pineapple juice and sugar; cool. When thick beat until frothy fold in egg whites. Chill and serve with whipped cream.

Mrs. Pester—Couldn't you match that sample I gave you?

Her Husband—Sorry, dear, but it was impossible. They had the same goods but I couldn't match the price. It's gone up \$2.

Man wants but little here below, And, too, in days like these, It seems that woman nothing daunts When summing up how much she wants To wear below the knees.

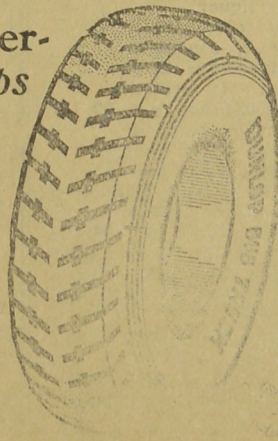

It can give you definite proof of the unprecedented low-tire-cost of Dunlop Double-Strength Bus-Truck Pneumatics.

Professional haulage contractors vitally interested in low transportation costs are coming to Dunlops on the strength of actual results.

Here's an opportunity for you to save money also by equipping with special Hand-built Bus-Truck Tires, the supreme accomplishment of the "Founders of the Pneumatic Tire Industry."
