## CHIEF SUPT. OF EDUCATION AND CHANCELLOR OF THE U. N. B. BEFORE FISHERY COMMISSION

Saint John, Feb. 1—"The Province  
of New Brunswick will put no barrier  
in the way, if the people in the  
oyster districts feel that benefit can  
be obtained by the oysters passing  
completely into Federal jurisdiction." This was the statement of Hon. J. B. M. Baxter, Premier of New Brunswick, before the fourth and concluding session of the Royal Fisheries Commission in the Court House here Tuesday afternoon.

CHANCELLOR C. C. JONES.

"We have no selfish interests," said Dr. Baxter, "and certainly no interests from the standpoint of revenue and, if it is found that such private interests as may now exist will be cared for, we certainly have no objection to the Dominion being given authority to deal with the whole question."

Dr. A. G. Huntsman, director of the Atlantic Biological Station of St. Andrews, told the Commission that the proposed Cooper Dam across the Passamaquoddy Bay would likely eliminate the sardine industry in that area.

### Educational Side.

During the afternoon session Dr. W. S. Carter, Superintendent of Education for N. B.; Dr. C. C. Jones, Chancellor of the University of New Brunswick, and W. K. Tibert, Director of Vocational Training for New Brunswick, all advocated special schools of instruction for young and old fishermen, under practical instructors with departmental supervision.

### Backs Drifting Here.

Referring to the salmon fishery, Hon. Dr. Baxter, continued, "I would urge from a purely local standpoint, that there should be no regulation adopted which would prevent drifting in the Bay of Fundy, or off the southern coast of New Brunswick. It seems to me that it would only extinguish a very important industry without giving any corresponding benefit. There is no doubt that the salmon in the Saint John River are becoming more and more plentiful as time goes by, and I think, in this connection that due credit should be given to the operations of the federal department."

The Premier, who was the first witness called, said that he had rather come to welcome, on behalf of the Province of New Brunswick, the members of the Commission, whose conclusions he felt sure the people generally would respect, and from which he expected a great deal of benefit would be derived.

### Educational Needs.

Dr. W. S. Carter, chief superintendent of education for New Brunswick, was the next witness called. He said that he was quite familiar with the industry in Saint John and Charlotte counties through his official visits and declared that there were no districts in these two counties better equipped with schools than those in the fishing districts. The last census had shown that Charlotte county presented the best report regarding illiterates, in Canada.

There was no doubt, Dr. Carter said, but that the shores and the fishing vessels in the spring had more attraction to the average fisherman's boy than to boys on the farm with the result that lessons were probably neglected more. Notwithstanding this, however, the boys of the coastal fishing villages were particularly bright and quick to learn.

### Suggests Special Schools.

Dr. Carter suggested that the fisher-

men should be afforded some means of obtaining a vocational training in his line as well as farmers and others who are now able to obtain courses of instruction in their chosen work. Some special winter schools for the boys of the fishing villages would prove advantageous.

"Would it be of advantage to provide an elementary course for the ordinary public schools, regarding fish life, etc.," suggested the chairman.

"Farmers and others would be asking for the same thing," Dr. Carter replied, "and consequently there would be no limit. We could not provide for all within the compass of the common school."

### Chancellor C. C. Jones.

Dr. C. C. Jones, chancellor of the University of New Brunswick, declared to the commission that he had been trying to figure out what a professor of mathematics was supposed to know about fish.

He, however, agreed with Dr. Carter's suggestion regarding the starting of short courses for the benefit of young men and boys of the fishing villages and said the older men might be taught something, also. He suggested that something might be done in the department itself, with the provincial branch in charge of men with a practical knowledge of the industry, who would conduct courses.

### Forms of Training.

There were many forms which the training might take, said Dr. Jones, including the study of fish migration, feeding grounds, curing of fish, transportation of the product and many other subjects, from which there was no doubt the fishermen would derive much benefit. He also referred to the possibilities of establishing experimental stations for fish along the same lines as the experimental stations operated by the Department of Agriculture. The pamphlets issued by the department, he said, were proving a benefit to the industry.

### Vocational Director.

W. K. Tibert, director of vocational education for New Brunswick, said that having been brought up in a fishing village he had a great interest in the industry. He declared that contrary to general opinion, the fathers

DR. W. S. CARTER.

did not discourage their sons to follow in their footsteps, but it was generally found that school teachers urged their pupils to attend school and get an education so that they would not have to become fishermen.

The Vocational Board was anxious to connect up with the fisheries of the province, he said, and were prepared to carry on some definite work.

He referred to the residents of Grand Manan, practically all of whom were forced to fish for their living, and the island was in a quite prosperous condition. The sad part of the matter was, though, that the great majority of the fishermen there were old men, the young men having all gone. To this end, he said, the industry must be made attractive enough to appeal to the boys and in this the schools must play their part.

The fishermen of old, he said, could not be taught, but the boys were a different problem. It was the same in farming and other lines also, the oldsters thought they knew all there was to learn, yearned for some other line of endeavor, such as the dignity of a "white collar job." In the last few years, he asserted, farmers had

## PREMIER SAYS GOVERNMENT WILL CARRY OUT RECOMMEN- DATIONS OF DUNCAN REPORT

Ottawa, Jan. 31—Premier Mackenzie King, in resuming his speech in the House this afternoon paid considerable attention to the Duncan Report. "One advantage of the Provincial Conference last November," said the Prime Minister, "was that ministers from the different provinces were in a position to give to the Federal Government an expression of opinion as to how in certain circumstances the action of the Government would be viewed; the action, for instance, which the Government had taken with respect to the subsidies being granted to the Maritime Provinces under the Duncan Report. We were pleased to find that, without exception, the Premiers of the provinces of Quebec, Ontario and the western provinces, the Premiers of all the provinces were at one with the Federal Government an expression of opinion as to how in certain voting the grants which were made last session to the Maritime Provinces and in saying that so far as their provinces were concerned they were only too happy that the Maritimes should continue to be treated in that manner, until at least the accounting which is asked for by the Duncan Report had been completed.

"There was an evidence that the prairie provinces and British Columbia, as well as the central provinces, all felt that in certain economic particulars the Maritime Provinces had been distinctly handicapped of recent years and they were pleased that, as a factor contributing to the unity of our Dominion, the Dominion had taken the course that it did in accordance with the recommendation of the Duncan Report.

### Feeling Reciprocated

"Similarly in regard to the western provinces we find on the part of our friends from the Maritimes, the ministers from New Brunswick, Prince Edward Island, also on the part of the Premiers of Quebec and Ontario, a distinct willingness to have the Federal Government, in the matter of dealing

with prairie provinces, take what may be described as a general attitude in so far as that was consistent with the finances of the Federal Government.

### Western Lands

"They seemed to feel that on the question of the return of the land the government might well consider what has been one of the main difficulties up to the present time, namely the advisability of continuing, along with the return of the lands, the subsidies which up to the present time had been paid in lieu of the lands, and the moment that attitude on the part of the other provinces became apparent to the administration, that moment we found we were in a position to negotiate with the prairie provinces on a basis much more satisfactory than we had felt liberty to negotiate with them before we had the general expression of view on the part of the other provinces of Canada.

### Duncan Report

"In regard to the Duncan Report I am glad to see the Honorable gentleman opposite accept that report in its findings and speak as highly as they do of the service which has been rendered by the Commission in the making of the report. Let me remind them, and I do in case by any chance they should repeat a criticism of the administration in dropping some other aid at another time—that when the government decided to have the question of the Maritime's claims referred to the government we were told by some Honorable gentleman opposite—indeed the line of criticism of the opposition and particularly of members of the opposition who came from the Maritime Provinces, was that this was no sort of way to deal with the question and that it was only a means of evading responsibility of the government in respect thereto. It has turned out to the opposite. The government has implemented at the present time a very considerable part of the report and we intend to continue our recommendations.

## BIG PLANS FOR DEVELOPING ST. JOHN HARBOR

Montreal, Jan. 30—Members of the St. John, N. B. Harbor Commission will hold two conferences here tomorrow with representatives of the Canadian National and Canadian Pacific Railways with regard to the ten million dollar program of port development in New Brunswick. The commissioners, Hon. Dr. W. E. Foster, chairman; W. E. Scully and Colonel Alex. McMillan and the general manager, Alex. Gray, who is also chief engineer, will leave for Ottawa, where they will place the proposed program before the Minister of Marine.

The general scheme of development includes the construction of one conveyor gallery at Pier No. 7, a grain jetty 1,250 feet long; a pier, 1,250 feet long and equipped with four one-story, fireproof, sheds and shipping offices; one grain elevator of 2,400,000 bushels capacity with grain conveyor galleries for loading grain at Pier No. 7, and the necessary railway tracks, roadways, sewage and water supply to serve the new works.

### Out in Few Days.

Walter Kitchen, son of Mr. and Mrs. A. B. Kitchen of this city, who has been confined to the Victoria Hospital for the past two weeks with jaundice and who is considerably improved, is expected to be able to leave the hospital in a few days. Mr. Kitchen was taken quite seriously ill some days ago and for a time his condition was quite serious. The many friends of the young man will be glad to learn of his improved condition.

### At The Gaiety.

"Two Arabian Knights" is the photo play at the Gaiety for Wednesday and Thursday. Louis Wolheim and William Boyd have the leading roles. The film is about the adventures of two Americans in Mohammedan lands. Some nice sea scenes and other interesting sets are seen. This picture is well worth seeing.
