## MONSTER WHISKY STILL WAS FOUND BY THE PROVINCIAL POLICE NEAR KEDGWICK

Campbellton, N. B., Jan. 15—That the provincial police discovered about two miles from Kedgwick, Restigouche county, what was supposed to be one of the largest stills ever found in New Brunswick, and that almost as soon as the discovery was made the premises were blown up and a member of the police force received bad burns about the face and hands, but was able to escape with samples of the product of the still, was learned from the provincial police here today.

It is said that the discovery was made early on Monday morning of last week and that the police are investigating and are hopeful that they are on the right trail. The Provincial Police with Sergt. Smith, of Bathurst and Constable Melliday, of Campbellton, have been active along the lines of the enforcement of the New Brunswick Liquor Control Act of 1927 during the last few weeks.

### Found Monday.

The still that was discovered on Monday it is believed had some connection with the visit in the neighborhood of a party hailing from Quebec, which a few months ago solicited support in this county with a view to operating a large still in the province. The police had been investigating this matter for some time. It was about 2 o'clock on Monday morning that they located the large still at a spot about two miles from Kedgwick in buildings that were formerly an old lumber camp, but had been extensively

remodelled and a concrete floor put down.

### Escape Made.

One of the Provincial Police, in approaching the camp, saw a light, and going closer cautiously, he heard voices inside the building. On the member of the force demanding admission to the premises the light was extinguished. The officer was able to effect an entrance and ordered the occupants to surrender, it is stated but they made good their escape. The officer made a hurried inspection of the place and found a six ton boiler and a complete still in operation. Among other things he discovered seven of the 40-gallon drums, four 110-gallon drums, 14 barrels of mash, 12 of the five-gallon kegs of alcohol, beside a number of five-gallon cans of alcohol.

### Blown Up.

As he was about to leave the premises he heard a noise near the door and had barely got outside when there was a sudden explosion and the premises were blown up. The police officer's clothing was burnt and he received bad burns about the face and hands but was able to get out a five-gallon keg of alcohol and a five-gallon can before the building was completely demolished. It took just a few minutes before the entire premises were in ruins and nothing was left of the big still and all the apparatus except some piping and old scraps of metal and wood.

## HOME RECEIVING SET MAY SOON BRING SIGHT AND SOUND; REMARKABLE DEMONSTRATIONS

Schenectady, N. Y., Jan. 15—The radio fan's dream of a home receiving set bringing to him both sight and sounds nears realization. Radio waves have carried both audition and vision into homes here to prove the engineer's contention that television is almost ready to leave the laboratory for the home. Some further simplification and a regulation of cost of apparatus is all that stands in the way of household use of television, they declare.

A small audience, seated in a home here, Saturday, saw in minute detail the actions of artists whose voices they heard from a common radio loud speaker. The transmitter was located three miles away. The demonstration was given newspapermen by the General Electric Company, in whose laboratories the television transmitter and the home receiver were developed. Credit for the present state of perfection of the television is given mainly to E. F. W. Alexanderson, chief consulting engineer of the Radio Corporation of America.

### Small Apparatus.

The apparatus was housed on a cabinet much like that of a phonograph. A three-inch-square opening in the television permitted viewing of the radio pictures.

First was seen merely a streak of parallel lines, but under the manipulations of the operator these disappeared in a few minutes and a luminous field appeared.

As a voice came over the loud speaker saying that the demonstration was about to begin, the face of the speaker was seen. He lit a cigarette, the smoke of which was plainly apparent. He was followed by a ukelele performer, but due to the limited size of the screen merely the face was visible. A girl appeared with a book in her hand and when she held a page to the transmitters even pictures on the page could be seen. A tie which she said was highly colored, however, merely appeared as a piece of flat cloth without any distinguishing colors.

### Limited As Yet.

Mr. Alexanderson stated that at present the vision broadcaster was limited to the transmission of but a single subject, such as the face of a person or an extremely concentrated group of objects.

Television broadcasting has been conducted from the company's station here regularly for some time. Mr. Alexanderson said, the transmitter

operating on 38 metres. To the present time transmission has been attempted only over short distances, the inventor said, but it is the intention of the experimenters to try for greater range on the assumption that the short wave will be received better at long distances, as in the case of radio broadcasting.

## SEVEN PEOPLE DROWNED ON THE MISSISSIPPI

New Orleans, Jan. 15—Seven persons were drowned at Norco, thirty miles up the Mississippi River from this city, when the towboat City of Pittsburgh collided with a motorboat which was operating as a ferry during a heavy fog this afternoon. They were Arthur St. De, 13-year-old son of Camille St. De of Norco; Walter Bergeron, Jr., 12-year-old son of Walter Bergeron, sr.; Anatol Nicholas, 45-year-old farmer, of Tatt, who leaves a widow and six children; Murphy Nicholas, 18, son of Anatol Nicholas; Urvin Landeche, 21, who operated the ferry for his uncle, Emile Landeche, of Norco; Ed. Johnson, negro, of Hanville, and Tom Tomba, negro, Hanville.

Only two ferry passengers escaped death. They were Clifford Baudreau and Albert St. De, brother of the drowned Arthur St. De. They were carried some distance by the fierce current of the river, swollen by melted ice, up stream reaching the levee by swimming. The tow-boat was carrying ten empty barges to Pittsburgh and had tied up during the night and morning owing to the density of the fog. The tow was getting under way when she ran down the ferry, according to Sheriff L. C. Vial of St. Charles Parish.

Captain L. Brazier of the City of Pittsburgh, was arrested on the charge of manslaughter and released on \$10,000 bail. The tow belonging to the Carnegie Steel Corporation of Pittsburgh was allowed to continue its upstream journey.

Varteg, Wales, Jan. 15—Two sheep, buried under four feet of snow since the big Christmas storm three weeks ago, have been discovered alive and are expected to live. Sixteen others of the same flock perished.

## WATER POWER DEVELOPMENT IS RAPIDLY TRANSFORMING THE INDUSTRIES OF CANADA

(Toronto Globe.)

Water power development is rapidly transforming Canadian industry as motor cars are recasting transportation. The changes of a decade in both fields would not have been deemed possible by the most optimistic prophets at the end of the war. In all parts of Canada, though particularly in Ontario, Quebec and British Columbia, water powers are being harnessed for the benefit of industry. Of course, the main source is on rivers and streams, but definite projects are under way for the use of tidal waters on the coast of New Brunswick.

Greater use of water power develops industry, reduces the need for imported coal, makes possible the conversion of waste products into wealth, and brings light and power to remote sections of the community. Electric light and power on Ontario farms are changing social and economic life, and the movement will continue indefinitely. Science has made possible the transmission of electric energy to greater distances, as illustrated in the line from the Ottawa and Gatineau Rivers to Toronto and beyond soon to be in operation. This will be on a voltage of 220,000 compared with the 110,000-voltage lines until recently the maximum. Two decades or so ago Toronto was anxiously awaiting means by which power could be transmitted from Niagara Falls, less than half the distance to Ottawa.

Another advance is in the use of storage dams. A few years ago the available water power in Canada was estimated on a basis of minimum flow of water. The Province of Quebec has taken a leading part in the construction of great dams for the holding back of flood waters, and the releasing of them at an even flow all through the dry months of the year, when ordinarily the power would be seriously reduced.

A striking illustration of this solution of power difficulties is the construction now proceeding of a storage basin in the upper reaches of the Gatineau River with a capacity of 95,000,000 cubic feet. Three large power developments lower down the river will benefit by this enterprise. Storage reservoirs in other parts of Quebec give insurance for other large power plants. Ontario's main development is on the Niagara River, and

happily this Province has as storage basins four of the Great Lakes lying above. The use of reservoirs will probably raise the available horse-power in Canada from the minimum flow capacity of 20,197,000 h. p. to 25,000,000 h. p.

The year 1928 promises to be of great importance in Canadian power development. Last year additional hydro power throughout the Dominion was installed to the volume of 221,655 h. p., while other undertakings were advanced to such a stage that a further total of 378,000 h. p. will be ready for use during the first six or seven months of this year. At the end of 1927 the total installation in Canada had grown to 4,777,821 h. p., which will in a few months pass the 5,000,000 h. p. mark. Compare this with the total of 2,305,310 h. p. at the end of 1919 and an idea of the rapid growth in this industry will be realized.

## STEAMSHIP AUDITOR AN EMBEZZLER

Boston, Jan. 14—George W. Gordon former auditor of the Eastern Steamship Lines, Inc., pleaded guilty in the Superior Court this afternoon to six indictments for conspiracy and for larceny of approximately \$175,000 from the steamship company. Sentence was deferred.

Others indicted with Gordon did not appear in court today. Among them were his wife and her sisters.

The three women yesterday made voluntary statements to District Attorney Foley to aid the government in recovering part of the stolen funds.

## WILL SPEED UP MAIL SERVICE TO THE WEST

Montreal, Jan. 15—"If I remain Postmaster-General I will have mail carried from Montreal to Vancouver in one day," declared Hon. Peter J. Veniot, Postmaster-General, at the official opening of a new Post Office at Rawdon, Quebec, today.

The declaration came after the minister had described the revolutionization of postal delivery within the past few years. He spoke of the recently inaugurated air mail services from Moncton, N. B., to the Magdalen Islands; from Leamington to Pelee Island, Ont., and the mail air service to the Yukon.

Mr. Veniot was accompanied by Hon. P. J. A. Cardin, Minister of Marine and Fisheries, and Paul Mercier, M. P., for St. Henry.

## Stiff Joints Eased Pain Rubbed Away

It's surprising what a brisk rubbing with Nerviline will accomplish on a sore rheumatic joint. It may be in the shoulder, the elbow, the ankle or knee joint. Nerviline sinks in deeply; its warming, pain-destroying power penetrates through the muscles and fibres—it brings ease and comfort at once. "In my case—a knee joint that had ached for years, was rid of intense rheumatic pain—that's why I recommend Nerviline for pains, aches, strains, lumbago, sciatica and similar ills." This was the experience of N. M. Napier of Kingston. No Rheumatism stronger than Nerviline. Get a 35-cent bottle today.

### Assessment Notice

The Board of Assessors of Taxes for the City of Fredericton hereby require all persons liable to be rated for the year 1928 forthwith to furnish to the Assessors true statements of all their Personal Estate and Income, which is assessable under the City of Fredericton Assessment Act, 1926, and true statements of wages or salaries paid to employees, and hereby give notice that blank forms on which such statements may be furnished, may be obtained at the office of the Chairman of the Board of Assessors, and that such statements must be perfected under oath and filed in said office on or before the 15th day of February, 1928. Dated this 12th day of January, 1928.

PETER FARRELL,  
Chairman of the Board of  
Assessors of Taxes.
