

WHAT CAN THE INCOMING PROVINCIAL GOV'T DO FOR THE YOUTH OF N.B.

What a Carleton County Girl's idea is of Provincial Problems.

Following is the prize winning essay of Miss Mary Kathryn Bell, daughter of Mr. and Mrs. Howard Bell of Lakeville. The essay won first prize in the province wide competition recently conducted by the Twentieth Century Clubs:

The Incoming Provincial Government can try to lower the expenses of the Government and keep it free from debt so that when the youth of today come to take over the Government of the province, they will not have to start with a large provincial debt on their hands.

The Incoming Provincial Government should try to lower the expenses of the Government and keep it free from debt so that when the youth of today come to take over the Government of the province, they will not have to start with a large provincial debt on their hands.

They might make education a little easier to obtain by lowering the cost to enter certain educational institutions.

The Provincial Government should make a law that every boy and girl should go to school until they are seventeen years of age, unless their health or some other good reason keeps them from going.

At the Vocational School young men learn to be carpenters, bookkeepers, and farmers, etc.; while young women learn to cook, sew, bookkeep, etc. The Government used to give this school a large grant of money to help carry it on, but it cut him.

This grant and give a small sum (if any at all) and left the rest to the County Council. Thus the provincial government is not doing much for this school, which is a great help to young people, who cannot afford to go to college.

They should try to encourage the industries of New Brunswick and get the youth to take an interest in these industries.

The government should forbid the sale of liquor to young people and punish anyone who gives it to them. For if the older people of today sell or give liquor to the young people, what kind of men and women do they expect them to become?

The government should forbid people to sell or give tobacco to the young people. Because a great many boys start to smoke before they have their growth and are stunted. Tobacco is also injurious to the health and they won't grow up to be the strong citizens they should be.

The government should not show so much friendship towards foreigners, who come into the province, by letting them have farms, putting machinery on the farms and often putting furniture in the house, and sometimes if they fail, the government has to pay their way back to wherever they came from. This is a great expense to the province and helps to make taxes so high. The government does all this for a foreigner, while if a young man of the province wants a farm, he has to buy it from the government and is given a certain number of years to pay for it. When this time is up if he hasn't paid for it the government takes it away from him.

In many districts there are many young people who waste a great deal of their time by not having anything to do. The government could help this problem out by granting a piece of land to each of these districts and have these young people plant vegetables, flowers and grain; cultivate them and look after them. Then at the end of the season give a prize to whoever has the best and find a market for the produce. This would help the young people put in their time and keep out of mischief and at the same time encourage the industries of the province.

The government should pass a law forbidding married women to work, such as teaching school, being secretaries and nursing. This would give employment to the young unmarried women.

The government should also make a law stating the wages an employer should pay his employed. This would prevent the unemployed, when applying for a position from underbidding one another. Because after a person who has not the ability for a certain position is hired he will take lower wages than the person who has the ability.

Which ever party is in power should not show so much partiality to their own party by just giving them positions. In this way a lot of men who have not the ability to do the work are given positions because they happen to be a member of the party in power. This is not being fair to the people who have the ability to do the work.

Neither party should bribe people to vote for them by giving them money or by telling them they will get a job if the party wins the election. Because this is not a very good example for the older people to be setting before the youth today and is illegal!

Children under 16 years of age should not be allowed to take a man or woman's place in trying to do any kind of work. The government should stop this by passing a law to forbid it.

"The codfish lays 10,000 eggs. The homely hen lays one; The codfish never cackles To tell you what she's done. And so we scorn the codfish. And the homely hen we prize, Which demonstrates to you and me, That it pays to advertise."

JOURNEY'S END FOR DOUG

MONTREAL, July 15—With hushings and shushings, and smugglings off one train and onto another Douglas Fairbanks Sr., gay screen Lochinvar, rode out of the West this morning, swooped through Montreal in a friend's limousine to the Windsor station to catch a train for the Express of Britain's sailing from Quebec.

Suddenly gone Greta Garbo and shy of publicity, the gallant screen idol told newspapermen in New York yesterday that he intended to charter a special plane from that city to Quebec. Instead he caught the regular Montreal train, but wired ahead to an official of the Fox Film Company to meet him at the Westmount station.

WHAT CAN . . . oig owobmKkt of the C.P.R. with an automobile. Breakfastless he dropped off the train there at 8.15 a.m. and rushed straight to the Ritz-Carlton Hotel where Lady Ashley was staying in-cognito and in luxury.

The luxury had increased during the course of yesterday afternoon for she had been on a shopping expedition through Montreal and during the course of it acquired a set of fox furs and an ermine coat.

This morning, however, she still wore the same light summer dress in which she arrived yesterday. She also wore the same dark goggles, neatly masking the love light in her eyes, when Douglas Fairbanks and she were smuggled aboard the first section of the boat train special.

Reporters in search of the two, missed them at first, chiefly because Doug Fairbanks Sr. despite his heroic appearance on the screen, is but little more than shoulder high to the average man. Lady Ashley, on the other hand, is close to the six foot mark. She did not leave her drawing room on the train until it had been in motion for at least ten minutes. Then she headed straight for the dining room where Doug was already having a delayed breakfast. They were accom-

MANGEL ROOT ROT PROBLEM FOR GROWERS

Most cultivated plants in the delicate seedling stage are susceptible to attack on the roots and stems by the soil inhabiting fungi, which cause wilting and dying of the plants so affected. The mangel crop is suffering this year in certain parts of the Province as a result of this type of disease, due in some measure to the protracted periods of cool wet weather which obtained during the months of May and June. Other crops susceptible to this type of trouble are potato, beet, turnip, cabbage cauliflower, asparagus, pea bean barley, oats, astor, stocks, lupino etc. An important feature in the prevention of this type of disease is the elimination of surface moisture of the soil. For this reason greenhouses and hotbeds should be so constructed that the plants receive full measure of the sun and comparatively dry air is supplied by proper system of ventilation. If the subsoil can be wetted with a heavy application of water at long intervals such a practice is more desirable than frequent sprinkling in which the surface soil is kept wet and the sub-soil remains dry. Stirring the surface soil after an application of water will help it to dry and thereby reduce chances of injury to the seedlings. Under field conditions if the soil has a tendency to hold too much moisture it should be well drained and such operations as early ploughing after harvest, repeated loosening of the soil with hoe or cultivator, and adequate manuring with nitrogenous and phosphatic manures are desirable. If disease has appeared in the seed bed in the previous year, new soil should be procured. Susceptible crops should not be grown on the same soil for more than one year. If potatoes are involved the tubers should be treated before planting. Full information on this subject can be found in the Dominion Department of Agriculture pamphlet No. 134, New Series.

Growers having trouble with their plants are requested to send specimens of same together with samples of soil to the Dominion Field Laboratory of Plant Pathology, Experimental Station here.

Vegetables as a food furnish minerals, vitamins, protein and aid in eliminating poisons. Serve two vegetables every day but once a week serve three or four vegetables.

Cream of Vegetable Soups
Cream sauce made with vegetable water and milk as the liquid (thin) and vegetable as characteristic flavour.

Vegetable Chowder
1 cup diced raw potatoes.
1 cup diced raw carrots.
2 cups tomatoes (raw or canned)
2 tbsp. finely chopped onion
1 tsp. salt.
4 tbsp. finely chopped celery.

Vegetable Chowder (2)
1 cup canned corn.
2 cups canned tomato,
1 cup canned peas
1 cup canned string beans
2 raw potatoes, 1 small onion, 2 stalks, finely diced.

Cream of Carrot Soup
2 cups carrots, 4 slices of onion, 2 cups milk, 2 tablespoons butter, 4 tablespoons flour, salt and pepper. Cut carrots in small pieces and cook with onion in water to cover, until tender. Press through a strainer. There should be 2 cups of stock. Finish as a vegetable sauce, that is melt 4 tablespoons butter, add 4 tablespoons flour, salt and pepper and last the vegetable stock. Cook over direct heat until the flour is well cooked, stirring constantly. Then add hot milk and serve immediately.

Pea Puree
2 cups peas—cooked until soft and rubbed through sieve.
1 tsp. salt.
1 tsp. butter.
½ cup milk.
Pepper.

Potato Soup
2 cups mashed potato, 1 qt. milk, 2 slices onion, 3 tps. butter, 2 tps. flour, 1½ tps. salt, a little celery salt pepper and cayenne, 1 tsp. chopped parsley. Scald milk with onion. Re-tor. starch vegetables require from 1 to 1½ tps. of flour to 1 cup of liquid. egg yolks are sometimes used to thicken and also increase the food value, 1 or 2 to a pint of liquid.

Sour Cream Potato Soup
2 cupfuls of diced potatoes
1 cupful boiling water
1 teaspoon salt.
1 thinly sliced onion
½ teaspoon of pepper
2 cupfuls of sour cream
Minced parsley.

Tomato Bisque
1 cup milk
1 cup tomato juice.
2 tbsp. flour.
2 tbsp. butter
Salt and pepper.
Melt butter, add flour, stir until it bubbles. Add milk slowly. Stir until smooth and thickened. Add heated tomato juice slowly. Season just before serving.

Tomato Soup
2 cups tomatoes
2 tbsp. butter.
1 tsp. flour.
1 tsp. salt.
1 qt. milk.
Sprig parsley.
1-4 tsp. white pepper
½ tsp. soda.

Canned Tomato Soup
1 peck ripe tomatoes, 1 large head celery, 6 large onions. Wash tomatoes, cut in pieces, add onions and celery, washed and cut. Boil these until very soft. Press through a sieve. Put again on the stove and add ½ cup sugar, 1-4 cup salt, ½ cup butter, ¾ cup flour and 1-4 teaspoon cayenne pepper. Melt butter, add flour, sugar, salt and pepper. When blended, slowly mix with the strained tomato. Heat to boiling and let cook until thickened. Pour into well sterilized jars and seal.

Prefers Career To Baseball
HOLYOKE, Mass., July 12—Edward Moriarty, former Holy Cross baseball captain and until recently a rookie member of the Boston Braves nine, has taken up his duties as a baseball instructor at the Elmwood playgrounds here.

Moriarty left the Braves with the statement that he was through with professional baseball and intended to enter the priesthood. Today he took up the same duties at the playgrounds which he had last year. He was given a great welcome by boy baseball candidates.

PRINCE RUPERT, B. C., July 11—Prince Rupert's "sea serpent" has turned out to be nothing more than a basking shark.

Photographs of the monster taken by Joe Gay of the Fisheries Patrol Service were examined by staff members of the Prince Rupert Fisheries Experimental Station. The shark was 28 feet long, five feet in circumference around the middle and its tail was six feet, four inches wide.
