

CITY COUNCIL HELD BUSY
AUGUST COMMITTEE MEETING

August Committee Meeting with Discussion on
Several Topics — City Relief Brought Up —
By-Law Covering Saw Mill Nuisance Passed —
K. P. Band Ask Concession.

The city council met in its August committee meeting last evening, considering several matters. Several delegations appeared before the council. His Worship Mayor W. G. Clark presided.

The regular August committee meeting of the city council, held in the mayor's office of the city hall, was a lengthy one. His Worship Mayor W. G. Clark presided and the following aldermen were present: Maxwell, McKnight, Kitchen, Mundle, Gunter, McCaughey, Mitchell and Dr. Wright.

Ex-Ald. C. L. Dougherty appeared on behalf of the ratepayers on Regent street, near Maryland Hill, asking that a by-law be passed regulating operation of sawmills. At the present time a sawmill in that area is deemed to be a nuisance. Mr. Dougherty said that such a mill, in operation nine or ten hours a day, is a nuisance in a residential district. It was not only creating a noise but turning that vicinity "into a regular lumber yard," said Mr. Dougherty.

The council discussed the matter. It seems that the sawmill is now almost through its operations. Mayor Clark suggested that a clear by-law be made in order to avoid confusion respecting by-laws in connection with sawmills. Some discussion was held on how to change the by-law.

The bills for the month were read and passed.

Respecting the sawmill matter, it was suggested the difficulty was a

ment work in the city this year was made by City Engineer J. D. MacKay. The work this year has included grass cutting, work on the greens, setting out trees, promotion of a nursery, cleaning up Queen's Square.

This year there has been a decided improvement, Ald. Moses Mitchell declared. The improvement has been noticeable in the Old Burial ground.

Motion was made that the city appropriate \$200 for local improvement association work.

Ald. Maxwell reported on the Municipal Home, saying work was progressing satisfactorily. D. J. McLeod will fumigate the building on Saturday evening. Several recommendations had been made by the committee for painting and laying floors. Bills in connection with the Home were ordered paid.

Mayor Clark thought it would be wise to inspect the repairs to the Home at four o'clock this afternoon since it was a large expenditure and the council would be wise to view the premises.

The bill from the city solicitor, P. J. Hughes, K.C., was received and passed by the council.

A report from the Children's Aid Society for \$200 of their grant was given.

Victorian Order Nurses were granted \$375 of their grant of \$700.

Wine Flows Freely
In Rhine Festival

COBLENZ, August 5—The picturesque "wine village" erected every summer in an ancient market place in Coblenz, is celebrating its 10th birthday this month.

Over a million and half enthusiasts for the flowing grape have visited this festival centre of the Rhine vineyards in the decade. More than 4,500 bottles of Rhine wine are emptied annually by thirsty visitors. The festival is accompanied by songs and dances.

WINDS CHARTED
EIGHT MILES UP

NEW YORK—Data on wind velocities and directions at all altitudes up to eight miles was being studied today by Prof. J. E. Woodman of the School of Engineering of New York University. The information was obtained without risk or human invasion of the stratosphere and continuation of the experiments is expected to give information of great meteorological value.

Fortunes have been spent by science in stratospheric exploration, but the apparatus used by Prof. Woodman was comparatively simple. He obtained the data with a large rubber free balloon and a specially constructed telescope. The balloon was sent up from the campus of the university and because of the unlimited visibility, it was possible to watch its flight through the telescope until it reached its top ceiling of 45,000 feet, or approximately eight miles.

The special instrument used to watch the balloon is called a theodolite, and by following the movements of the small balloon one can calibrate the altitude and wind directions accurately.

Readings are taken every 2,000 feet as the balloon climbs to the rarified atmosphere, where it finally bursts. At 43,000 feet the wind was blowing west-northwest at a velocity of eleven miles an hour, and at the 45,000 foot level the winds were blowing due westerly at a speed of five miles an hour.

This fact is looked upon by Prof. Woodman as of considerable importance to science because of the direct variance of wind directions and velocity at such a comparatively short differences of 2,000 feet.

In making the observations, the balloon drifted out of sight at the 45,000 foot level which generally is regarded as the beginning of the stratosphere.

The station where the observation was made is a co-operative effort between New York University and the United States Weather Bureau. The station was established to aid in surveying conditions for the New York Boston and the New York, Montreal air lines.

Dr. James H. Kimball, flying weather expert, said that the station was established at the university because the visibility aloft often is bad over Newark Airport.

"Only this morning the university station was able to obtain readings as high as 12,000 feet, while Newark took none," he said.

The veteran meteorologist said that the balloon used in the high observation was a regular twenty-four inch rubber type which gets larger the higher it goes because of the expansion of the gas.

Primo's Passport
Ordered Cancelled

ROME, Aug 5—Cancellation of Primo Carnera's passport was ordered today by Achille Starace, secretary general of the Fascist party, because

of the Italian heavyweight's poor showing in bouts in the United States. "Carnera's showing is a dishonor to Fascist sport," said Starace.

Carnera's future bouts abroad will be under control of the Boxing Federation, according to an official of that organization. The Italian giant's passport will be returned to him only if the Federation considers the former champion capable of upholding the honor of Italian sports in a worthy manner.

LAST OF LEFT-
HANDERS LEAVES
LOUISVILLE CLUB

LOUISVILLE, Ky., Aug. 5—A further change was made in the Louisville's club's pitching staff with the release of Frank Nevola, the last southpaw left on a formerly strong portside pitching staff.

Nevola, who was secured last winter from Toledo, where he had a fair season in 1934, has been unable to get started this year.

Louisville has nearly always had two or three lefties in recent years. However, Ken Penner, Louisville's manager, who, in his day, was a mighty good Class AA right hander, apparently leans to right-handers.

Dependence of Canadian
Communities upon the C. N. R.

Even a brief study of the map of Canada will show how widespread in a geographical sense, are the transportation facilities afforded by Canadian National Railways. From the Atlantic to the Pacific and North and South from its main lines the C. N. R. serves practically every important section of the Dominion.

Along its 22,000 miles of track in Canada are 4,550 C. N. R. Depots or Stations. Some of the larger centres of population, (from which comes, of course, much of the company's revenues), are not dependent solely on the C. N. R. for their railroad requirements, but over four thousand stations, or approximately ninety per cent of the company's total stations in Canada, are located at points where the only rail transportation service available is that provided by Canadian National Railways.

Almost without exception these stations serve communities, varying in size and wealth, which produce commodities required in other parts of Canada or abroad. In their turn they are purchasers from manufacturers and merchants throughout the Dominion. They are thus highly important in the economic structure of the country, and in providing the means of transportation for passengers and freight Canadian National Railways is performing an essential service . . . one which, indeed, is of tremendous significance in enabling Canada to exist as a complete and united national entity.

As will be readily understood, many of these communities are only in the early stages of their development . . . their growth has in all too many cases been retarded by the economic conditions of the past few years . . . but their potentialities, under happier trade conditions, are beyond computation. Further, the people who live in them and who are building the Canada of the future have claims to railway service as a necessary adjunct to their welfare which must be seriously considered.

This aspect of the services rendered by Canadian National Railways will command the approval of all who have faith in the destiny of Canada. Without adequate patronage however from the public as a whole, the performance of these services becomes a matter of great difficulty, if not of impossibility.

Canadian National Railways is operated economically. It stands ready to deliver the best service possible in railway facilities . . . transportation, telegraphs, express, hotels . . . and it is on this basis that the C. N. R. solicits your cooperation in the great and nationally important work performed under all conditions and throughout the entire year.

During the present Summer season the C. N. R. is providing special fares and excursions between points throughout Canada. These are exceptional travel bargains. The nearest C. N. R. agent will be glad to give full particulars.
