'POWER' FUEL WOULD TURN AUTOMOBILES INTO BARS

Chemist Says Drinking Alcohol Could Easily Be Separated From Gasoline Leaving No Taste or Odor

KANSAS CITY, April 27—Motorists going to their gasoline tanks for an intoxicating drink, if alcohol is blended with gasoline, was forecast yesterday by Dr. Gustav Egloff, of Chicago, in a paper prepared for a debate on "power alcohol" before the American Chemical Society.

"A fight over the merits of this power" fuel, which is good grain, or drinking alcohol to be made from farm products, was brought before the society in a symposium. Both sides experiments, one to show that the gas mixture gives better performance, the other the opposite.

Readily Separated

Explaining drinking at the gas tank, Dr. Egloff stated: "Alcohol could be obtained from alcohol-gasoline blends in any amount at any desired time.

"It is readily separated from a blend of gasoline by shaking with water. Any gasoline taste and odor may be removed by shaking with activated carbon. The cost of recovering 100 proof liquor would be about five cents per quart. Every ten gallons of 10-per cent alcohol gasoline (10 per cent alcohol and 90 gasoline) has potentially eight quarts of 100-per cent proof liquor."

Leo M. Christensen, of Ames, Iowa, associated with the Farm Chemurgic Council, spoke for blending; ethanol is the grain alcohol he proposes making from farm products.

"Used in the form of blends", he said, "ethanol is not now a competitor or a substitute for gasoline, but an ingredient of a superior fuel, competing with various materials and processes used to prepare gasoline suitable for use in modern high compression engines.

Better Mileage

"Better mileage, improved acceleration, practical elimination of gum and carbon deposits smoother, and more pleasing engine operation and other advantages have so commonly been reported by users of those fuels that there can no longer be any reasonable doubt concerning the marketability of properly prepared alcohol-gasoline blends."

Dr. Egloff and Dr. J. C. Morrell, both of Chicago, stated: "Actual road tests made using ten per cent alcohol-gasoline fuels have shown a lowered efficiency in motor performance. The decreased efficiency might be overlooked by the average motorist, but the initial increase in the alcohol-gasoline cost in comparison with gasoline cannot be overlooked since the yearly increase of the motorist's fuel bill would be over \$1,000,000,000."

Blending, they held "can only be regarded as an indirect and inefficient type of subsidy to certain agricultural groups at the expense of the general public."

A Restaurant That is Different!

Restaurants have their own personality as much as persons. Good food, well kept, prepared in a cleanly manner and daintily served, combine to give our restaurant an attractive atmosphere.

TENDERS FOR COAL AND COKE

SEALED Tenders addressed to the undersigned and endorsed "Tenders for Coal" will be received until 12 o'clock noon (daylight saving) Thursday, May 14, 1936, for the supply of coal and coke for the Dominion Buildings, in the Province of Nova Scotia, New Brunswick and Prince Edward Island.

Specifications and forms of tender can be obtained from the Purchasing Agent, Department of Public Works, Ottawa; the Resident Architect, Halifax, N.S., and the Resident Architect, Saint John, N.B.

Tenders will not be considered unless made on the forms supplied by the Department and in accordance with departmental specifications and conditions.

The right to demand from the successful tenderer a deposit, not exceeding 10 per cent of the amount of tender, to secure the proper fulfillment of contract, is reserved.

By order, J. M. SOMERVILLE, Secretary, Department of Public Works, Ottawa, April 21, 1936.

SHORTER HOURS

TORONTO, Ont., April 27—Shorter hours of labor for every industry including agriculture, was suggested last night as a solution for economic problems facing Canada today by A. T. Morrow, retiring president of the Ontario Educational Association.

He spoke to several hundred school teachers and school trustees in Convocation Hall. Still speaking of labor, he declared that in the "near future" all work would be valued on an hourly basis.

With deliberate care the retiring President divided his speech between economic and labor conditions and education in the schools of today and compared the relationship between them.

He warned that if the Department of Education was to "make a smooth working curriculum and make a place for education for citizenship as well as for an academic course, a change is necessary."

"Change Is Necessary"

Early in his speech, referring to labor conditions, he said: "It is probably too soon to set a value on hourly services as only part of the occupations have as yet set a value on their hourly services, yet in their near future it will be necessary for all full-time services, part-time services and seasonal services to be valued on an hourly basis."

"I think I am safe in saying that during the life-time of this association the world has advanced more scientifically, mechanically and industrially, than in all previous periods since the beginning of time.

"Yet the system under which rural elementary schools and secondary schools were established has changed very little. If our Department of Education is to make a smooth working curriculum and make a place for education for citizenship as well as for an academic course a change is necessary."

Mr. Morrow was not particularly hopeful of an early change, and de-

eyelids aid as shields and protectors. The kinds of accidents which may lead to eye injuries are almost infinite in their variety. Sight may be so damaged through accident that there is no hope of saving it, but more often is sight lost through failure to secure skilled care than as a direct result of the injury.

Thus it will be seen that partial or complete loss of sight could be avoided, in many cases, either through preventive measures for the eyes of the new-born, or through the promptment of all eye injuries.

It is important that when the eyesight is defective whatever sight remains should be conserved. Many of the larger cities provide, in the schools, sight-saving or sight-conservation classes. These classes serve the useful purpose of providing for education without further damage to the eye. In addition, the child is guided towards whatever vocation he or she is best fitted for, considering the handicap of poor vision.

A valuable contribution of the health service in schools is the periodic examination of the children's eyesight. Defective sight is a handicap which may interfere with the child's progress in school, while the eyestrain resulting leads to irritability, headaches, etc. Early correction of defective vision obviates all such unpleasant results.

SIGHT CONSERVATION

"Of all sad words of tongue or pen, the saddest are these, 'it might have been!'" These words can be suitably quoted to express our feelings with regard to the sightless eyes which might now see if only certain things had been done at the right time.

Sight conservation begins before the birth of the child. Gonorrhoea in the mother may result in the infection of the child's eyes with the same disease during birth. This means ophthalmia neonatorum, a disease of the eyes of the new-born that causes blindness unless prompt and effective treatment is given.

Fortunately, the simple procedure of placing a few drops of silver nitrate solution in the eyes of the child destroys any disease-producing bacteria which may have gained entrance as the child passed through the birth canal. This procedure is required as a routine practice in many places. As a result, blindness from this cause has been greatly reduced during the past decade.

The eyes are so placed that the bony structure of the brow and cheek saves them from many injuries. The

clared: "If we are to judge by the splendid row that was staged when the proposed Township School Board Bill was submitted by the Government to the ratepayers for their approval and the number of resolutions that came in annually against any change it is not likely a move for any change will be made by the ratepayers".

Back To Land

The world had turned to the building up of armaments, he said, and asked what it would mean to the advancement of civilization.

"It means", he answered himself, "an enormous debt for posterity to pay and likely the sacrifice of the most vigorous of our youth."

"Would it not be more humane and natural to take advantage of the scientific development and shorten the hours of labor to give the people an easier life and give employment to all?"

The Canada Year Book had informed him, he said, that in 1891 the rural population of Canada to 68.2 per cent of the general population. In 1931 the same authority had stated that the rural population was only 46.3 per cent.

"It seems to me that a reasonable place to look for employment would be where we lost it and begin on the farm", he said.

The farmer worked 3,000 or 4,000 hours per year, while the rest of the workers were employed only 2,000 hours or less.

"Will the day ever come when there will be two shifts on the farm? There is no telling what time will do—things that seemed impossible a few years ago are now accepted, and we wonder why they did not happen before?"

"Before such things can happen it will be necessary for all businesses, occupations and services to be in a position to appraise their investments and value their services."

"No great movement was ever thought possible at first."

"With an adequate form of accounting it is possible that agriculture within a decade or so, will cooperate and shorten its hours of labor and give employment to a greater number of people."

"As a body of educationists, it is our duty to co-operate with our Governments to bring about more contented people and to make life more pleasant", Mr. Morrow said.

Sees Need For Knowledge

He contended: "Knowledge is king. Unless our people have a true conception and working knowledge of conditions that will give a reasonable return for their investment and an equitable return for services, democracy will not reach the high standard of perfection that we expect and are hopeful for. Such knowledge must be universal. Shall we take the lead?"

Mr. Morrow called his speech "Appraising our Investments", and early said that until recently people had depended on their investments for a living and that farmers and unorganized labor depended upon supply and demand.

"These days are gone", he said, "It is time that all these occupations should take some steps to appraise their investments and value their services to get on an equal basis with other occupations."

The Federal and Provincial Governments now required citizens to return an accurate accounting of their incomes. "Is it not reasonable that such accounting should become a compulsory subject in our curriculum?" he asked.
