

DON'TS FOR THE HOUSEHOLDER

1. DON'T LIGHT YOUR FIRE WITH KEROSENE.
2. DON'T turn on the draft in your cook-stove and leave the room. If the stove overheats it may set fire to wood partitions or soot in the pipes or flues.
3. DON'T set your stove on the bare floor without a metal sheet or asbestos pad beneath it.
4. DON'T place your stove nearer than 18 inches from the wall and don't forget to protect the wall behind it with a sheet of zinc loosely hung on hooks to give an air space between the metal protector and the wall.
5. DON'T throw water on blazing fat or grease. It only spreads the flame. Use ashes, baking soda, flour or salt.
6. Have your chimney cleaned every fall.
7. See that your stove pipes are in good condition and protected by a metal collar where they pass through a roof, wall, floor or ceiling.

KARL WALKER, Chief, Fredericton Fire Department

FIRE PREVENTION WEEK, OCT. 3 TO 9

These Simple Suggestions, If Followed by Everyone In The Family, Will Make Your Home Safe From Fire

PREVENT FIRES

Put lighted matches and smokes out before you throw them away. Keep matches where small children cannot reach them. Never smoke in the garage, barn, or attic, nor in bed.

Remove rubbish, waste papers and all unnecessary combustible materials. Provide metal ash and trash cans. Burn rubbish only in a safely covered brick or metal incinerator. Watch the fire.

Examine all stoves, furnaces, and smoke pipes to make sure they are safe and well away from woodwork or other burnable materials. Have needed repairs made at once.

Value the advice of your fire chief who says that many fires are caused by dirty or defective chimneys. Have the chimney cleaned regularly, and have all defects repaired.

Escape the danger of flammable liquid fires and explosions by keeping no

gasoline in the house. Do dry cleaning with safe liquids or send the work to the cleaner. Never start fires with kerosene.

Notify the electric company of electrical trouble and the gas company of gas leaks. Replace "blown" fuses with new ones—not pennies. Avoid homemade wiring jobs. Don't look for gas leaks with a match.

Teach everyone in the family to be careful of fire, to watch stoves, fireplaces, electric irons and all other possible fire causes, and every day to remove old rags, papers and other rubbish.

Fireproof your home as far as possible by re-safing roofing, fire stopping in hollow walls and partitions to stop the spread of flame, and non-combustible basement ceiling.

Inquire of your fire chief, when (Continued on Page Seven)

FIRE PREVENTION IN THE HOME

The best place for fire prevention to start is in the home. Charity should start there according to the ancient saying, and certainly safety should come first. In order to safeguard the home, inspection should be made, not only Fire Prevention Week but periodically throughout the year. All heating and lighting equipment examined, chimney and pipes kept

clean of soot. No smoke pipes permitted through combustible walls; dis-

position of ashes safeguarded. The fuse cabinet should be of metal or asbestos lined. Fuses in all blocks, none of them bridged, and not over 15 ampere fuses used in branch circuits. All drop cords should be insulated, and not supported on any conductive material. Electric irons always detached when not in use and kept on metal stands.

Matches should be kept out of the reach of children and the children should be regularly taught the

ARE YOU INSURED?

Now's Your Chance!

Fire is giving you a chance! Should it strike at you, you might remember this neglected opportunity! The owner of a house in flames cannot insure at that late moment. Before Fire comes is the time for thinking of—acting upon—insurance! Now is your moment! And insurance is our business. Let's discuss insurance.

danger of fire and not to play with matches.

Closets should be kept clean and all rubbish removed from the entire premises. Cleanliness is next to Godliness. Perhaps that is the reason it always plays such an important part in fire prevention.

It is not the intention to give all the details of home inspection. You

have already admitted to yourselves that you can safeguard your own homes. Put the impulse into action. Start this Fire Prevention Campaign in your home where fire ever lurks to destroy you and yours. And then by vigilance and regular re-inspection, you will be adding greatly to your store of safety and happiness for all time to come.

WE CAN FURNISH YOU WITH PLANS OF MODERN HOMES FROM SMALL COTTAGES UP. BLUEPRINTS FURNISHED OF ALL STYLES OF MODERN DWELLINGS AT REASONABLE COST.

PAINTING YOUR STORM DOORS AND SASHES

If YOU are one of the many who overlooked the storm doors and sashes on the house painters' last visit, you are now perhaps perplexed by the problem of painting these items to match the rest of the house. And that is a problem! For unless you have a bucket or so of paint left over, there is small chance of making an exact match.

Many have found a colorful solution to the problem in the use of bright colors. A brighter exterior always means a cheerier homecoming during drab winter months.

Your First Line of Defence Against FIRE

Is a Properly Built Home in Which all UNNECESSARY FIRE HAZARDS HAVE BEEN ELIMINATED by Experienced Construction and a Proper Choice of Materials.

KEEP HEAT INSIDE, DAMP COLD OUT

Don't try to "get through" this winter with a worn, leaky roof! It will actually pay you to replace that roof now, before winter sets in. Not only will a new roof protect your home from the extra chill of dampness, but a new roof will provide extra insulation against excessive winter cold.
