FREDERICTON, NEW BRUNSWICK, MONDAY, JANUARY 7, 1938

JANUARY EMPLOYMENT SITUATION

DATA tabulated by the Dominion Bureau of Statistics show that industrial activity has invariably declined at the first of January, the average change in the employment reported at that date in the years, 1921-1937, having been a decrease of about seven p. c. In the recession indicated at the opening of the present year, the proportion of total workers laid off was fractionally less than the average in the last seventeen years; however, staffs in recent months have been unusually high, so that, despite the slightly less-than-normal percentage loss at Jan. 1, 1938, the number of persons released from employment was unusually large. Statements were furnished by 10,437 employers whose payrolls aggregated 1,081,471; as compared with 1,159,759 at Dec. 1, this was a reduction of 78,288 persons or 6.8 p. c.

Based on the 1926 average as 100, the crude index at Jan. 1 stood at 113.4, as compared with 121.6 at Dec. 1, and 103.8 at the beginning of January in 1937. After correction for seasonal influences, the index was 121.4, compared with 119.1 at Dec. 1, when a greater-than-normal reduction in employment had been recorded, lowering the seasonally-adjusted index. In the benefits can be demanded as an earnlast few months the corrected indexes have been higher than in any other ed right. Thirdly, under the insurance period since the late autumn of 1929.

For Jan. 1, 1937, 10,034 employers had made returns showing that they had an aggregate staff of 985,078 men and women, compared with 1,044,411 in the preceding month. The largest losses had then taken place in manufacturing and construction.

The following shows the unadjusted indexes as at Jan. 1 in the years able to earn in private industry. since 1927: 1938, 113.4; 1937, 103.8; 1936, 99.1; 1935, 94.4; 1934, 88.6; 1933, 78.5; 1932, 91.6; 1931, 101.7; 1030, 111.2; 1929, 109.1 and 1928, 100.7

The most pronounced curtailment at the date under review was in construction and manufacturing. The reduction in the former, involving over 26,500 persons, was unusually large, while the loss of 38,836 in factory unemployment insurance workers are staffs represented a percentage decrease of 6.6, which was slightly smallerthan-average. The decline in the latter constituted not quite 50 p. c. of the total decrease reported in all industries at Jan. 1, 1938, as compared with true of persons who receive assistan average proportion of 56.7 p. c. in the years since 1920. The recession in manufacturing at the beginning of January in other years of the record has always been followed by a revival in succeeding weeks, although in no case has the recovery indicated at Feb. 1 equalled the shrinkage noted in the preceding report. Within the manufacturing group, the largest losses at Jan. 1 occurred in iron and steel, food, textile, lumber and pulp and paper factories.

Among the non-manufacturing industries, there were pronounced seasonal decreases in construction, as already mentioned, while there were contractions on a smaller scale in logging, mining and transportation. On the other hand, hotels and restaurants and retail trade reported decided relief rather than submit himself to

As is customary at the time of year, the contractions in many instances surance policy, especially in thos resulted from shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The arrangement of satisfies the salaries in private industry. This is the anticipation of an early resumption of activity. The experience of the very important because it defeats the last seventeen years shows that usually, though not invariably, there is at object of the law. Most of the unem-Feb. 1 a partial recovery from the general losses recorded at the begin- ployment insurance laws provide that ning of January.

BACK TO THE SPANISH ARENA
