

## WHAT CBC CAN DO—AND WHAT IT DOES

The nation-wide broadcast by L. W. Brockington, K.C., defending policies of the Canadian Broadcasting Corp. was very disarming. Mr. Brockington is an able after-dinner speaker, good tempered, persuasive.

With most of the CBC chairman's points, few will disagree. He painted an attractive picture of what a national radio enterprise should be—one that will appeal to most reasonable people. Unfortunately, CBC is in some respects, moving directly away from these stated objectives.

Mr. Brockington effectively answered critics who say Canada is barren of ingenuity and talent; who claim we must pipe in foreign programs because we lack good programs of our own to attract Canadian listeners. He made it clear that the CBC does know how to put on an entertaining variety of programs, high in both entertainment and in cultural value.

What Mr. Brockington said makes it all the more mysterious that Canada should be devoting such a large proportion of time on its government owned system to non-Canadian advertising programs.

It should also be made clear that the CBC chairman's figures do not tell the whole story.

He said that U.S. commercial programs took only 8½ hours per week out of an available 93 hours. He said sustaining (non-commercial) British programs were given 12 hours. What he did not say was that the two new 50,000-watt CBC stations at Toronto and Montreal do not carry British or Canadian non-revenue programs when they can get U.S. commercials.

One of these stations (CBL at Toronto) currently devotes 44% of its time to U.S. programs and gives little or no time to British programs. It also passes up (in favor of U.S. commercials) many of CBC's own all-Canadian programs. These programs are carried over the "peewee" stations such as 100-watt CFCY in Toronto.

Mr. Brockington's defense did not answer the plain fact that the CBC system, built by public money, is being used to pipe into Canada, at substantial rates, an increasing flood of commercial programs, developed in the U.S.; using U.S. talent and propagating U.S. ideas and ideals.

It may be that many people want to hear these American programs and would listen to them no matter what Canada itself put on the air. That is beside the point.

What alarms the national sensibilities of thoughtful citizens is that we have setup a publicly-owned radio organization in Canada; given it command of this mighty new instrument of propaganda and public opinion; told it to make radio a factor for nation-building; and yet allowed it to sell a large part of its time to the powerful radio interests of another country.

There is only one reason for setting up a public broadcasting corporation: to Canadianize the air and provide in Canada programs of Canadian spirit and content that will

attract and influence Canadian children and adults. Success to CBC will be measured by its ability to achieve this objective. It has done much that is good. But it misinterprets its function when it puts American commercial programs over the air.

The CBC should not try to ride two horses, going in opposite directions.

### New Technique For Treating Sinus Is Described by Writer

Rex Beach, the author, a chronic sufferer from colds, has found a new way of treating throat infection, diseased tonsils, and sinus afflictions, and tells about it in March Cosmopolitan. He reports on the Roetgen-ray method used by Dr. J. Thompson Stevens of New York City, who advocates free clinics.

"Radiology won't prevent the occurrences of common colds and neither will anything else," Dr. Stevens told Beach, "but it is a preventive. Many colds result from nose, throat and sinus conditions. When those areas have been normalized with X-rays, susceptibility to infection is lessened."

"In the treatment of focal infections of the throat and sinuses, radiology is not only safe and permanent in effect, but also, it removes the infection more thoroughly and completely than any other method yet devised. It gets a better and more permanent result and gets it without risk, without fatalities, without loss of the patient's time, and at no expense for hospitalization. It involves neither pain nor inconvenience; it can be used where patients are too ill from other causes, to stand an operation."

Diseased tonsils and adenoids yield to X-ray treatment, Beach explains, because the diseased tissue is more easily destroyed by the rays

### A Rich Man's Creed

"I believe that the day will come when tolerance will be substituted for bitterness in ordering the affairs of this world. I believe in the creative power of human intelligence. I believe that ideals of justice and right are bound to win in the long run against injustice and might. I believe that we can yet make this world a worthy and beautiful home to live in instead of a place to fight and starve in. This is my creed."

Millions from the greatest modern champion of human justice, President Roosevelt, to the lowliest sufferer from human greed and injustice tramping the streets in near despair could subscribe to that creed written by John D. Rockefeller, Jr.

Justice is potential Lord of injustice just as life is Lord of death else both had been extinguished and forgotten long ere this triumphant hour.

The sorry part of it is that just as a scientist here and there has laid down on the altar of germ and radium experimentation in order that life might continue to dominate the scene in and through others, so many laborers and a few leaders here and there among idealistically inclined employers have made great sacrifices that justice might persist.

Today the fighting is not so hopelessly fierce since many of the mighty are helping the weak. Time was when man tried to justify injustice. Today there are thousands of leaders who for the most part merely disagree as to the best method of safely abolishing instances of injustice. Salary bonuses that run into the millions while there are millions with the fear of starvation in their bones breed intolerance and bitterness. The latter will disappear like tracks on water or smoke on air when the former have ceased to be.

## CAFE SLEEPERS NEW DEPARTMENT ON C.N. RAILWAYS

(Special to The Daily Mail) MONTREAL, Que., Feb. 9.—Orders for six new dining cars and ten cafe sleepers have been placed with the Canadian Car and Foundry Co. Ltd., by the Canadian National Railways, according to announcement made by the railway today. All will be air-conditioned. They will be delivered in June, in time for summer schedules.

Designed by Canadian National engineers and architects, the cafe sleeper is a departure from the usual type of equipment. It will consist of eight sections, a double bedroom, smoking room and ladies dressing room, and, at one end, a cafe with accommodation for sixteen guests. The kitchen and pantry will be a little smaller than that of the regulation diner.

The new diners will have accommodation for forty persons, an increase of four over equipment now in use. In construction they will be 20,000 pounds lighter than the older type. "While gaining the advantage of lighter weight they will lose nothing in strength," John Roberts, chief of motive power and car equipment said. "They will be constructed of alloyed steel." All the cars will be equipped with thermo sashes and will be air-conditioned.

MONTCTON Feb. 9.—Work is in progress in the railway shops here in connection with conversion of four standard sleeping cars into buffet sleepers, according to W. E. Barnes,

than other living tissue, and the amount of irradiation needed to cause absorption is in no wise dangerous to the healthy structures. Actually the shrinking of the tonsils and the lymphatic structures of the wall and the throat by this process produced drainage and thereby removes deformities throughout the entire mucous membrane.

"We also obtain wonderful results in chronic sinusitis," Dr. Thompson told Beach, "and catarrh, where other methods of treatment have accomplished nothing. Deafness, particularly when caused by catarrh, has been helped. Many sufferers from rheumatism, arthritis and neuritis caused by focal infections of the throat have been relieved."

Radiation is also used by Dr. Stevens in the treatment of goitre, particularly of the toxic type where surgery is so dangerous and in certain tubercular conditions, as well as for chronic laryngitis and streptococcus infections, hay fever and colds.

## SALE OF BIBLES BANNED BY QUEBEC CITY POLICE

Prohibition is General Practice, Says Acting Chief After Complaints Made by A Mission

QUEBEC CITY, Feb. 10.—It is the "general practice" of the Police Department to withhold permission to distribute the Bible in Quebec City, Superintendent H. R. Gagnon of the Royal Canadian Mounted Police and acting director of the local Police Department, declared tonight when questioned regarding a complaint from a mission group that Testament selling had been barred.

The comment came following the complaint from officers of the Feller Institute Division of the Grande Ligne Mission, which is operated by a group of French-speaking Baptists at Grande Ligne, Quebec, about 35 miles south of Montreal. The school has been in existence more than 100 years and its directors were informed a few weeks ago that a "missionary" in this city had been refused permission to distribute copies of the

Testament, as is done in other parts of the Province.

Superintendent Gagnon, on leave from the Federal force, was not chief of the local department when the alleged refusal was given.

"However, while I cannot say what happened in this particular case, the general practice is to withhold permission, as in the majority of cases the distribution of the Bible is used as a blind to cover up the spreading of some other kind of propaganda."

"While some people might appreciate the opportunity of purchasing a Bible, others might be annoyed."

The refusal was believed based in a civic by-law making the obtaining of permission to distribute literature mandatory. The Quebec "Padlock Act" only bans distribution of Communist propaganda, and a Quebec Act giving the power of refusal to distribute literature to all police chiefs has been repealed.

## CALIFORNIA HAS COUNTERPART TO ROMEO AND JULIET TRAGEDY

DINUBA, Calif., Feb. 12.—The remorse of Romeo was Sam Jurihara's today. His beloved was dead of poison, and he was recovering from a shot-gun wound in the abdomen which caused her to think he was dead, and to destroy herself in grief.

She was an American girl and he was a young Japanese farmer. Their love was more futile than that of which Shakespeare wrote. Caste, family objections and California law all defeated them. No Caucasian may marry an Oriental in this state.

They were secret lovers, but Jessie Jean Salsan's father had known about it for some time and had objected strenuously. It was he, A. C. Salsan, who lay in wait for Sam Jurihara yesterday and shot him when he came to call on Jessie Jean. The girl was 19, the young man 24. They had been in love for a year.

Forbidden to see the girl, Sam Jur-

ihara came by stealth. He parked his automobile a safe distance from the house and walked toward the Salsan home.

It was early in the morning when his face appeared at the window of the girl's room. Salsan fired his shot-gun twice. Both charges of buckshot missed him and Sam Jurihara ran into an orange grove. Salsan went outside to look for him. He could not find the young man but he found his parked automobile and he hid in it.

Sam Jurihara went back to his car, and from close range he was shot in the left arm, side and abdomen.

All this time the terrified girl remained in the house. She wept for joy when her lover escaped the first shots, but when she heard the next one, and saw her father coming home with his smoking gun, she was certain that it was the end of her love.

She went to a medicine cabinet and swallowed poison. The lovers were taken to the same hospital to adjacent rooms. The girl died there with her stepmother beside her, and Sam Jurihara passed the crisis of his wound not knowing what she had done. He was told later. His doctors said he will live.

## Be Extra Careful about STUBBORN COLDS

Relieve Their Misery this PROVED Way

TOO often, the cold that "hangs on" is a result of neglect... and neglect is always risky. Be extra careful of a stubborn cold, of course. But the safest course is to be careful of all colds. Don't experiment. Relieve their misery this doubly proved way.

Here's What To Do: It's best to stay in bed and get lots of rest. Eat lightly, drink plenty of water, and keep elimination regular. And use Vicks VapoRub without delay.

VapoRub has been proved by everyday use in more homes than any other medication of its kind—further proved by the largest clinical tests ever made on colds. (Full details in every VapoRub package.) Only Vicks give you proof like this.

No Long Waiting for Relief to Begin...

VapoRub is direct external treatment. No "dosing"—no stomach upsets. Just massage it on throat, chest, and back. Then—to make its long-continued double

action last even longer—spread a thick layer on the chest and cover with a warm cloth.

Relief starts almost at once. You begin to feel warm and comfortable as VapoRub goes to work direct through the skin like a poultice. At the same time its medicated vapors, released by body warmth, are carried direct to the irritated air-passages with every breath.

This double action loosens phlegm, eases irritation and coughing, helps break local congestion. And long after restful sleep comes, VapoRub keeps right on working.

NOTE: If there is much irritation and coughing, or the air-passages feel clogged with heavy mucus or phlegm, even stronger vapor action is helpful. Pour boiling water in a bowl, melt a teaspoonful of VapoRub in it, and inhale the steaming vapors for several minutes.

**VICKS VAPORUB**

Now WHITE—STAINLESS

## HERE COMES PACKARD FOR 1938

-the only cars that can make you all these promises!

MIRACULOUS RIDE—The new Packard Six and new Packard Eight (formerly called Packard 120) bring you the gentlest ride ever offered to motorists—a ride that literally re-makes roads!

UNEQUALLED SAFETY—These new Packards are outstanding in safety. Side-sway is eliminated and the danger of skidding is tremendously reduced.

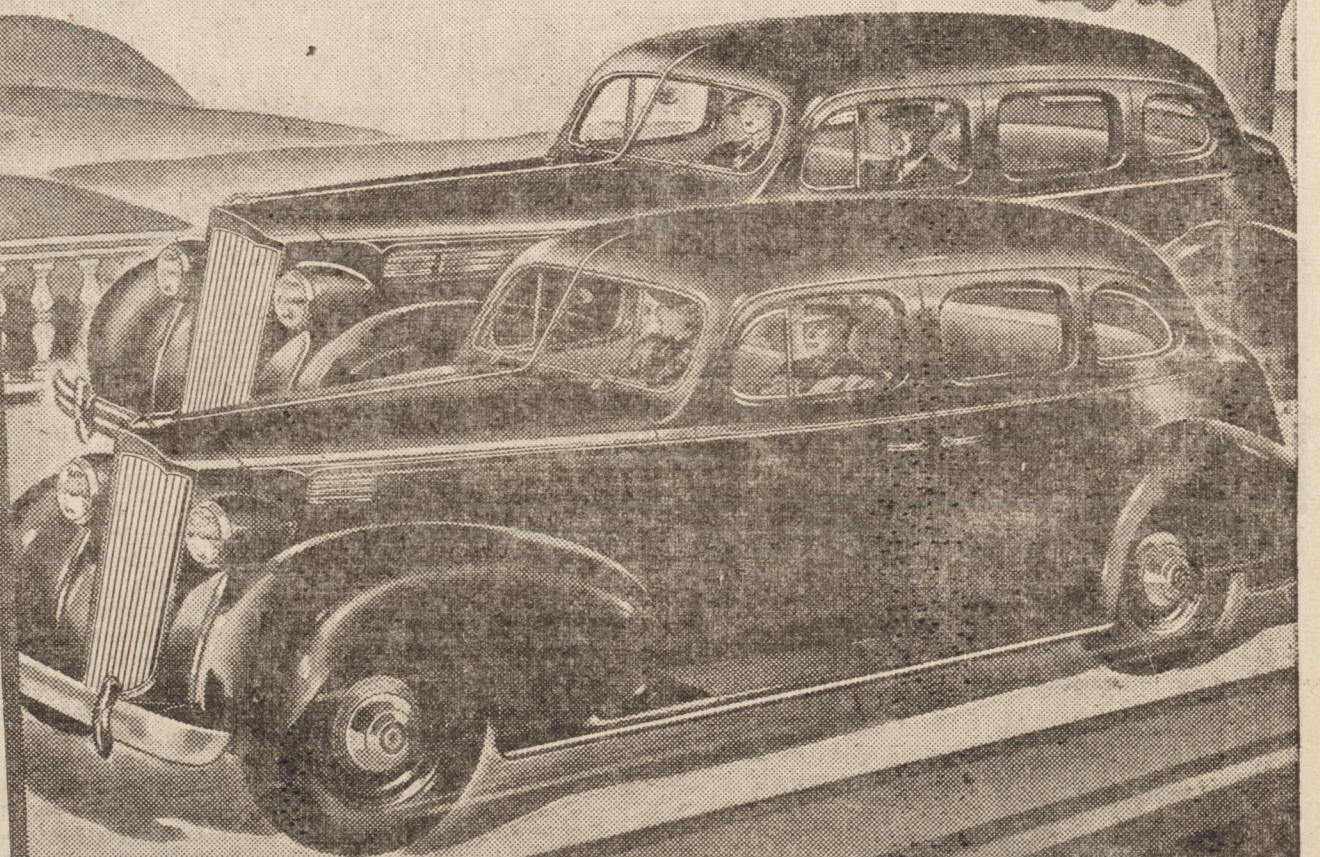

REVOLUTIONARY REAR END—The foregoing things have been accomplished by a trio of epochal improvements which now bring the effect of independent wheel suspension to the rear end.

NEW QUIET BODY—As a result of years of research in cooperation with a great University, Packard brings you a really quiet all-steel body with an all-steel top. MORE LUXURIOUS SIZE—Both the Packard Eight and Packard Six are seven full inches longer in wheelbase than last year. Bodies are far wider. Trunks challenge those of any cars for roominess.

SERVICE NEEDS CUT—The need for service is still further reduced. Example: Chassis lubrication is now needed only twice a year!

ENDURING BEAUTY—The famous Packard lines are now more beautifully streamlined than ever. But they still proclaim your car a Packard, still guard it from early style obsolescence. Only Packard gives you both long mechanical life and long style life!

EASY AVAILABILITY—YOU can afford one! See your Packard dealer. He will give you proof that, if you can afford to buy and operate any new car, you can afford to buy and operate a Packard!

YOU HAVE A DATE TUESDAY EVENINGS

Each Tuesday evening, at 9:30 P. M. over the N. B. C. Red Network, Packard brings you one of the most entertaining full-hour shows on the air! Larry Ross, Charles Butterworth, and Florence George head a brilliant cast that entertains each week one of the topmost stars of radio, stage or screen!

NEW 1938 PACKARD SIX & EIGHT

{ FORMERLY CALLED THE PACKARD 120 }
