The Wood Medicine Co. formerly Windsor, Toronto, Ont.

The Hillsboro Gypsum Mills The Finest in the World

Albert County Has an Industry Employing Three Hundred Men With an Annual Pay Roll of \$150,000--Reciprocity Defeat Injured Extension of a Great District Industrial Concern

(Correspondence Moncton Transcript)

Hillsboro, N. B., April 16—Will Canadian Gypsum be placed on the United States free list? Will the duty on it even be materially reduced? Or will Uncle Sam continue his prohibitory tariff?

There are live questions in Hillsboro and Albert County generally, at the present time, because here are located the new Plaster Mills, probably the finest in the world, of the Albert Manufacturing Co., which employ in their mills and quarries over three hundred men, and whose annual pay-roll is about \$150,000.

The writer visited the mills and quarries of the Company recently, and his chat with their General Manager, Hon. C. J. Osman, gave him much valuable information with respect to the gypsum industry, which is still New Brunswick's greatest mining proposition, despite the recognized success of the coal fields of Queens and Sunbury Counties, the Bathurst iron mines, our oil and gas industry and the splendid prospects of the oil shales of the province.

Gypsum is regarded by the government of New Brunswick as a mineral and subject to royalty. No fixed royalty per ton has ever been demanded, but leases have to be taken out, at an annual rental per square mile, so that all the company's holdings here, which are freehold, have to pay toll in this way. The presence of gypsum does not indicate the presence of any other mineral, but, sometimes, the presence of salt, and, as a rule, is found resting upon beds of carbonate of lime, or ordinary limestone.

The Albert Manufacturing Company export from the quarries each year from 50,000 to 60,000 tons, all shipped to the United States, and, before the imposition of the duty on gypsum under the McKinley Tariff of 30 cents per ton, they shipped as much as 103,000 tons per year, varying from that maximum quantity to a lesser quantity of from 70,000 to 85,000 tons per year. In addition to this quantity, they manufacture from 20,000 to 25,000 tons a year, making a total output of about 150,000 barrels of 300 lbs. each, most of which is sold in Canada and passes over the Salisbury & Harvey Railway and the Intercolonial, the company having only a limited business of from 10,000 to 15,000 barrels per year of manufactured plaster sold at points in the United States. In all probability, the export business is manufactured plaster will increase largely if the proposed reductions in the Wilson Tariff are put in force. The output can be increased indefinitely, consistent with labor conditions, as they have large reserve gypsum on their properties.

The process of manufacturing gypsum and converting it into the article of merchandise which is known as "Plaster of Paris" is simple, and consists first of all, of crushing, so that a coarse product is produced; then a further crushing process, which reduces the crushed plaster to finer material, and then fine grinding, in which process all sorts of mills are used, this company using Sturtevant Vertical Emery Mills, of which they have six now running in their mill, with a total grinding capacity of upwards of 1,000 barrels per day, of the standard grades of plaster, which can be increased materially in the manufacture of coarser or lower grades. They manufacture a variety of grades of plaster, ordinary Calcined Plaster, branded "F." which is used for wall and ceiling plastering; "F.F." which is used for fine casting and "Dental" used entirely by dentists, and for the very finest casting work; also "Hard Wall" Plaster, which is used on walls and ceilings for general plastering purposes as a substitute for Lime Mortar, and is being adopted by most city architects, as well as being much used in rural districts, there being a very considerable saving in the time occupied in finishing up the interiors of buildings, as Hard Wall Plaster dries very rapidly, and it is estimated that any sort of building can be occupied about six weeks earlier if plastered with Hard Wall Plaster than if ordinary Lime Mortar is used.

Crude gypsum, when shipped from here as quarried, is manufactured under the same process at United States Mills as the company's process here, and used for the same purposes, except the lower grades of gypsum, which are largely used for the manufacture of Land Plaster and in the use of fertilizers as a dryer. Large quantities are also used in finely crushed form by manufacturers of Portland Cement, there being a limit as to the quantity permitted to be introduced in the manufacture of cement, the maximum quantity allowed being about 3 per cent. By the use of gypsum the set of Port-

land cement can be absolutely gauged so that it is easy for the manufacturers of cement to produce either a quick-setting or a slow-setting product in their mills.

The markets of the Albert Manufacturing Company extend throughout Canada. Business in the Maritime Provinces is not very large, but is increasing rapidly, the first large market being Quebec, and then every city on the various lines of railroad extending right through to Pacific Coast. There are many deposits of gypsum between New Brunswick and Nova Scotia and the west, but very few that compare in quality with the Hillsboro gypsum, so that although they cannot compete in prices on account of the high freight, the excellence of the company's manufactures enables them at this time to sell throughout Canada. As already stated, the United States offers a large market which would be more available if duties were reduced. At the present time, the western market of the United States is supplied largely from Western mills, and the Eastern market almost entirely from crude gypsum obtained from the quarries of New Brunswick and Nova Scotia, including Cape Breton. In addition to these markets, the company make limited sales in Australia and New Zealand, and South Africa.

Gypsum has many peculiar properties. It is the most greedy mineral absorbent known to science, and when used as a top-dressing upon the land, has the power to absorb moisture from the atmosphere and hold it until yielded to the plant with which it comes in contact; also the power of absorbing ammonia from the ground and atmosphere (which, as a plant food, is of great value) and delivering it also to the plant when placed in contact with it. It is quite possible that other important uses may be found for it; in fact, in certain districts where lumber is expensive and scarce, it can be toughened by the introduction of certain ingredients so that a very satisfactory lumber can be made of it, which can be planed and sawn and used as boards or scantling, and even hardened so as to make good, permanent and well-wearing floors, and, with the disappearance of the forest, there is no doubt but that it will, sooner or later, be adopted largely as a substitute for lumber. While it, alone, is not suitable for exterior work (gypsum being soluble when exposed to moisture), the shells of buildings could be constructed almost entirely of gypsum, and then, if covered with wire, so as to hold cement grout, or concrete, they could be plastered on the outside with this material, and made very lasting and entirely weather-proof.

This company owns most of the deposit in Hillsboro. In Albert County there are other deposits—one operated by the J. B. King Company of New York, this company owning a deposit immediately alongside of the King property, which is situated in Demoselle Creek. Gypsum has been quarried at Hopewell Hill and there are other deposits farther down the Bay Shore, in Albert County, but not at this present time, operated. This company also owns a property in Westmorland County, at Cape Maringouin, which yields a low grade of gypsum, which will be developed very considerably if the duty on gypsum is reduced, or removed, in the United States. Gypsum occurs at several other points in New Brunswick. There is a well-known deposit at Petiteodiac and explorations are now being made in Sussex, with a view to developing the deposits there. Large quantities of gypsum can be found along the St. Martins and Upham Railway, near St. Martins. There is also a deposit of a very inferior grade of gypsum on the Tobique River, at Plaster Rock. This is red in color and suitable only for manufacturing land plaster.

AFTER GRIPPE OR PNEUMONIA

the enfeebled system readily accepts any disease—Nature's resistant force is depleted and **Scott's Emulsion** is needed. Its highly concentrated nourishment is immediately distributed to every organ.

With **Scott's Emulsion** nature repairs waste, constructs healthy tissue and active, life-sustaining blood.

Nothing equals **Scott's Emulsion** in convalescence.

Scott & Bowne, Toronto, Ontario 12-82

sum can be found along the St. Martins and Upham Railway, near St. Martins. There is also a deposit of a very inferior grade of gypsum on the Tobique River, at Plaster Rock. This is red in color and suitable only for manufacturing land plaster.

Deposits of gypsum exist pretty generally throughout Nova Scotia, the largest now being operated in the vicinity of Windsor, Plants County, also near Amherst, where a large quarry is at this time in operation, also at Infield, on the line of the Intercolonial Railway near Halifax, and at Pugwash, at Truro, and between Truro and the Straits of Canso at many points along the line of the railroad as well as away from it, and through the Island of Cape Breton, where there are several quarries now being operated, this Company being interested in the large gypsum deposit on the Island of Cape Breton.

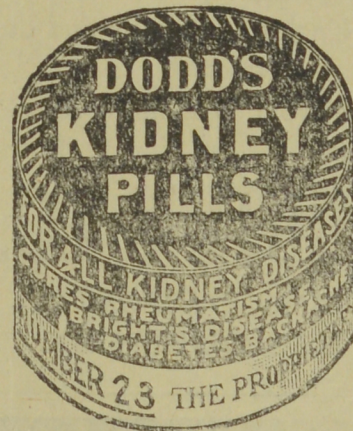

As already stated the total payroll for this Company will amount to about \$150,000 per year, most of this is spent in Albert County. Unfortunately, the gypsum business yields a very small profit, manufactured plaster of standard grade being sold for about \$1.00 per bbl. of 300 lbs., in carefully prepared, coopered and papered barrels, which represent about one-third of the selling price; and the crude gypsum being sold at from 75 cents per ton to 2240 lbs. to \$1.50 per ton, with a higher price for the very finest grade of gypsum, which is really alabaster, being pure white.

Shipments to the United States are almost entirely by water, consisting as they do, principally of crude gypsum, although owing to the scarcity of small coasting vessels, the company's business with Boston is done by rail at the present time.

The company are looking for relief and better prices with confidence, as a result of the change in duties, proposed by the present President of the United States. They considered it a serious blow to their business when the proposed trade agreement with the United States, known as "Reciprocity," was defeated.

Owing to the very small margin of profit resulting from the manufacture of Plaster of Paris, the directors of the Albert Manufacturing Company were quite reluctant to rebuild, and only finally decided to do so in consideration of the fact that the busi-

(Continued on page two.)

MAKES HAIR GROW

All drug stores sell SALVIA, and it is guaranteed to grow hair or money back.

The time to take care of your hair is when you have hair to take care of.

If your hair is getting thin, gradually falling out, it cannot be long before the spot appears.

The greatest remedy to stop the hair from falling is SALVIA, the Great American Hair Grower, first discovered in England. SALVIA furnishes nourishment to the hair roots and acts so quickly that people are amazed.

And remember, it destroys the Dandruff germ, the little pest that saps the life that should go to the hair from the roots.

SALVIA is sold by first-class druggists under a positive guarantee to cure Dandruff, stop falling hair and itching scalp in ten days, or money back. A large bottle costs 50c. The word "SALVIA" on every bottle. Sold at Ryan's Drug Store.

THIS DATE IN HISTORY

APRIL 21

1760—Corner stone laid for the Germantown, Pa., Academy, the oldest public school in America.

1816—Louis T. Wigfall, U.S. senator from Texas at the beginning of the civil war, born. Died in Galveston, Feb. 18, 1874.

1819—Oliver Evans, who made the first application in America of steam power for propelling land carriages, died in New York. Born in Delaware in 1755.

1827—Branch of the Society of Friends known as the Hicksites founded.

1836—Texans under Gen. Houston defeated the Mexicans at Santa Anna at battle of San Jacinto.

1887—Henry Detwiler who was the first physician in America to practice homeopathy, died in Eason, Pa. Born in Switzerland, Dec. 18, 1795.

1900—Attempt to blow up the gates of the Welland Canal.

1912—Memorial services for the Titanic dead were held in many churches throughout the British Empire and the United States.
