HAS EXTRA PAIR OF RIBS TO DISPOSE OF

Los Angeles, Cal., March 16.—Thornton Green, an elevator operator, 21 years old, has been suffering for years from a constant fever and his physician has just discovered the cause—two extra and unnecessary ribs. According to members of the Los Angeles Medical Association, Green's case is something new in medical annals and it is asserted that the young man will have to undergo an operation for the removal of the ribs if he wants to avoid sweating to death.

The extra ribs begin at the cervical vertebrae and curve downward, crossing the natural ribs down to the fourth. He suffers constant pain and his lack of shoulder development, the doctor asserts, is due to the presence of the extra ribs.

TEDDY WILL CALL ON VICTOR EMMANUEL

Rome, March 16.—King Emmanuel will give a dinner in honor of former President Roosevelt upon the occasion of the latter's visit to this city.

Every once in a while a Somerville woman moves all her furniture around and rehanges all the pictures on the wall, and then she says she feels as if she had moved into a new flat—Somerville Journal.

Visitor—In case of fire, how do I get out of this hotel?

Boy—Jump out of the window and turn to the left!

"Jabez is gettin' used to public speakin' ain't he?"

"Oh, yes, I remember her when you could not get him to stand up and now you can hardly get him to sit down."

IMPROVE ORCHARDS AND AID EXHIBITIONS

These Are the Suggestions
Made by the Agricultural
Committee—Interesting
Discussion.

Fredericton, March 16.

Fruit growing in New Brunswick was discussed by the agricultural committee yesterday. A number of resolutions were adopted, one recommending to the department the advisability of taking over the supervision of a number of old orchards and demonstrating what can be done with them when managed according to modern methods; another recommendation was that permanent displays of fruit, grains and vegetables be placed on exhibition in prominent centres; another recommendation was that a large provincial show be held next November at St. John.

Mr. Tuftney, the provincial horticulturist, was introduced by the chairman and delivered an address. He said that in the development of fruit growing in New Brunswick there were several things he regarded as essential at the outset. First, each farmer should be impressed with the idea that he should raise all the apples, and other fruit required for home use. There was no good reason for any farmer in this province having to buy apples for his home use. Every farmer can raise all he requires, and this was one of the things he proposed giving particular attention to. The second was the demonstration of the commercial possibilities of orchard-ising in New Brunswick. This could best be accomplished through the New Brunswick Fruit Growers' Association. In the past considerable of value had been done by this Association in a small way but it was now proposed to reach out for larger things. It is suggested that a large and representative fruit show be held at St. John next fall, before the close of navigation, so that all parts of the province can be represented and at that show to give a practical demonstration of what the province is capable along the line of apple growing. In connection with the fruit show it is proposed to hold a three days' convention of fruit growers. A third requisite which appealed strongly to him was the renovation of the old orchards. Nothing was more discouraging to the young farmer who was thinking of going into fruit culture than to see some of the old and run down orchards of his neighbors. He felt that the early efforts of the department should be given to instructing the owners how to bring these unprofitable orchards up to the state of commercial productiveness. In this connection he suggested that the department be authorized to take over the management for a few years of some of the old orchards for experimental purposes.

The planting of new orchards was the fourth essential of successful fruit growing. He felt that the department would not be justified in encouraging the setting out of new orchards until the commercial possibilities of those now growing have been demonstrated. His work in Ontario last year was wholly in the older orchards and in assisting the farmer to bring their fruits up to a state of productiveness. Mr. Tuftney gave statistics showing what had been done in one Ontario county alone in the past few years by co-operative effort and through the instrumentality of the Fruit Growers' Association. A few years ago 3,000 barrels of fruit suitable for export, was the record for the county. Last year 19,000 barrels of apples were exported from these same orchards, showing what can be done by intelligent and co-operative effort. There are very large areas in New Brunswick, particularly the St. John Valley, splendidly adapted to apple growing. Another thing which Mr. Tuftney thought demanded attention was the kind of nursery stock which is being sold to the farmers of New Brunswick. On account of the small and haphazard way in which the farmers of this province are buying their young trees they are getting only the scrub stock in most cases. He thought the department might well turn its attention to this matter and get the nursery stock in large quantities and of the very best varieties for their conditions.

Mr. LaBillois, ex-commissioner for agriculture, said he had been very favorably impressed with what Mr. Tuftney said, and he felt that every member of the committee would agree that he was a man who knew his business. He felt that the department of agriculture would have the unanimous support of the legislature in adopting any practical methods to improve the old orchards of the province and also to provide the fruit grower with a better nursery stock.

Appreciative remarks were made by Mr. Woods, Mr. Hartt and Mr. Pinder, each emphasizing the importance of demonstrating to the world and to our own people the great possibilities that await the successful fruit grower in the province.

The following resolution, moved by Mr. Woods, seconded by Mr. Hartt,

was unanimously adopted: That in the opinion of this committee the department of agriculture would be justified in taking over, by lease or otherwise, a number of the older orchards in various parts of the province, and demonstrating what can be done in making a commercial success of fruit growing.

Mr. Dickson brought up a matter, and made a suggestion that met with the unanimous support of the committee, and that was the importance of having a representative display of fruit and grains and such vegetables as are practicable placed in the departmental buildings at Fredericton for the inspection of visitors, and, if found feasible by the agricultural department, to also have a similar display at the immigration rooms in St. John, and the agent general's office in London.

Mr. Dickson said that every visitor to the province, if he can be induced to come to Fredericton, is taken to the departmental buildings, and is there given, as he supposes, a comprehensive idea of the resources of the province. He is shown specimens of the minerals of the province; he has pointed out the variety and beauty of the birds and wild fowl; and he is impressed with the size and fierceness of the bears, the majestic beauty of the "monarchs of the forest," and looks with curiosity and interest upon the beavers and snakes, the foxes and deer, the trout and salmon.

He suggested that a display of apples and other fruit raised in the province be prepared by the provincial horticulturalist and placed on permanent exhibition in the departmental buildings. He believed that the horticulturalist was at the present time preparing an exhibit of fruit for a national exhibition to be held in Berlin, and he thought it would be a good idea for a duplicate of that display to be arranged for home consumption. In this connection, Mr. Dickson thought a similar display ought to be on exhibition at the rooms of the superintendent of immigration at St. John.

The suggestion of the chairman of the committee was favorably spoken to by several, and the following resolution was moved by Mr. LaBillois seconded by Mr. Allain, and unanimously adopted: That the horticultural department be recommended to prepare a comprehensive display of fruit, grains and vegetables of the province, and have such displays placed on permanent exhibition at the departmental building at Fredericton, also at St. John, and at the agent general's offices in London, and other places thought to be of advantage to the province.

Deputy Commissioner Hubbard said that he felt strongly the possibilities of apple growing in New Brunswick. The west has made a great success of fruit growing, yet we in this province can grow apples of superior flavor and more desirable. The Nova Scotia orchards netted their owners the sum of one million dollars last year, but in New Brunswick we have ten times the area particularly adapted to fruit growing than there is in Nova Scotia. He believed it would be well for the fruit growers of this province to varieties best adapted to our conditions. The Montreal district had specialized on the Fameuse and this apple is selling in London at about ten cents each, and the farmers of the Montreal district are receiving a rich reward. The Fameuse and the Macintosh Red, another favored variety in the London market, can be grown more successfully in New Brunswick than even in the Montreal district. The Macintosh Red sold in New York last fall at \$10.00 a barrel, and today apples from the west are selling on the Boston market at \$5.00 a box of less than one hundred apples. He thought the proposed Fruit Show at St. John would do much to stimulate apple culture as a commercial enterprise.

Moved by Mr. Hartt, seconded by Mr. Leger of Westmorland, Resolved, that in the opinion of this committee arrangements should be made to hold a special Fruit Exhibition in the city of St. John in the month of November next, to demonstrate what can be done in the production of fruit in this province upon a commercial

SPRING OPENING DISPLAY

Wednesday, March 16 and Following Days

When we will make an attractive display of the very latest in
Ladies Cloth Suits, Skirts, Coats, Whitewear, Silk Under Skirts, Waists, Wash Suits, Princess Dresses, etc.

A special exhibit of New Dress Goods, Silks, Wash Goods of all descriptions.

Having recently remodelled and refurnished our second floor, we now have double our former space and greatly increased facilities for handling our rapidly growing trade.

scale. This resolution passed unanimously.

The committee also further discussed the question of commercial fertilizer and adjourned to Friday morning next.

TRANSPARENT OVERDRESS FOR WINTER SEASON

It is a rare fashion or a very poor one that does not try itself out upon two weights of material. Most of our styles reach through a summer and a winter season, and the double garment is no exception. It is to extend over into the warmer months.

We have had it act at its best in all of the diaphanous fabrics hung over more colorful, heavier or figured surfaces that form the foundation part of the dinner or evening gown.

We love the double garment in the blouse form for its adaptability for various tailor-made. Its outer chiffon covering has matched a mauve broadcloth, while the golden-browns and yellows of its Persian lining have rendered it wearable with the brown diagonal.

Even the cloak for evening wear has been veiled with chiffon, and now the first note of Parisian spring has been sounded in the colored chiffon tunic which she asks her belles and beauties to wear.

These coatlike garments are of plain material over figured Swiss, and while the reason for their existence is mainly that their belts may give a Russian outline to the most severe among medieval gowns, they succeed in retaining the fashion for two materials.

Colored linings are returning for use with the sheerest of Swiss fabrics; beautiful organdie is heralded, and batistes are flowered and barred.

When the ornate fabric appears as either garment or tunic, the lining is plain material; but if a sheer plain fabric be chosen for the dress or for drapery, flowered organdie is the perfect lining suggested by French models to take American women by storm.

Ravishing combinations are suggested. We hear of a cherry-eyed coat worn over white; and "coat" here does not imply warmth, but merely evanescent coloring.

Blacks in marquisette and chiffon are hung over colors more vivid than those worn without softening draperies, and chiffon in white is used under net to produce a shimmer.

The fashion is too beautiful to be lost to sight, and that creator who

JOHN SWAN, PIONEER, DEAD

Harvey Station, March 11.—John Swan, the oldest resident of this parish, died at his home at Tweedside yesterday morning after a short illness. He did not seem to have any particular disease, but was overcome by the weakness of old age and passed away very peacefully in full assurance of the life beyond. He was in his 88th year. He was a native of Tweedside, Northumberland, England, and came here about sixty years ago, accompanied by his parents, two brothers and four sisters. He went into the unbroken forest on the western side of the Big Oromocto Lake and there made for himself a farm and comfortable house. He was a man of more than ordinary intelligence, and took a leading part in religious matters, doing much by word and example to advance the moral welfare of the community. The deceased was an elder in the Presbyterian church for nearly half a century, and conducted the Sunday school at Tweedside for many years in a very efficient manner. At times he conducted church services in the absence of the pastor. He was a regular attendant at church until a few weeks ago, when he was prevented by weakness. He retained his mental faculties in a remarkable manner and only a few months ago at an induction of elders, gave an address with much ability and clearness of thought.

He had a wide circle of friends and was held in very high esteem by all classes.

The wife of the deceased, who was a sister of the late Mrs. Peter Wood, died last summer. He is survived by two sons and one daughter, Mrs. Janet Larner, who resided with him. His sons follow the engineering profession. One of them resides in British Columbia and the other in Lewiston, Maine. His oldest son, John M., was killed in his saw mill at Tweedside some years ago. George R. and Harry T. Swan of Tweedside, are grandsons of deceased, and Councillor Thompson, is a nephew.

"It was a fine wedding."
"Were you struck with the bride?"
"No; with an old shoe."

predicted several thicknesses—films if you will—of materials for the coming spring and summer knew his fashions as he knew his public.

Given a perfect note in costuming, woman is in no hurry to abandon it; and when she has been shown a perfection of color and fabric such as the recent combinations, it is almost sure to live.
