N. B. FRUIT GROWERS HEAR FINE ADDRESSES

Mr. R. C. Treherne Warns New Brunswick Farmers Against the Deadly Brown Tail Moth---Instructive Talks on Orchard Culture by Prots. Macoun and Crow.

St. John, N. B., Nov. 3.—The New Brunswick Fruit Growers' Convention, which has been in session here since last Monday, and which is one of the most successful yet held, will be brought to a close this evening. There was a large attendance at the exhibition in St. Andrew's rink yesterday and many favorable comments were heard. Yesterday was an exceptionally busy day, an extraordinary amount of business being got through with. Instructive addresses were also given.

An interesting session was held yesterday morning in the Natural History Society rooms, at which officers for the ensuing year were elected as follows:

Honorary president, Hon. J. D. Hazen.

President, C. N. Vroom, Sr. Stephen.

Vice presidents, W. B. Gilman, Fredericton; S. L. Peters, Queens-town; Benjamin Charters, Chartersville, N. B.; O. W. Wetmore, Clifton.

Treasurer, Henry Wilmot, Oromocto.

Following this brief business session, interesting and profitable lectures were given by Prof. J. W. Crow and Prof. W. T. Macoun, the former taking as his subject Cropping Young Orchards, and the latter choosing for his theme Growing Nursery Stock in a Northern Climate. In dealing with his subject, Prof. Crow pointed out that the most desirable course to follow in the case of young orchards would be to cultivate early in the spring, about May say, and continue the cultivation until July, or perhaps longer, according to the climate. Then sow a cover crop, suitable to the soil. If nitrogen is not needed, rye has been found by experience to be a good cover crop. For general cropping the speaker suggested the use of potatoes, turnips or other roots. At the conclusion of this lecture, those present manifested their interest in the speaker's remarks by asking numerous questions, regarding climatic conditions, nature of soils, manner of fertilizing and cultivated proper growth and other similar questions, all of which were promptly and satisfactorily answered by the lecturer.

Prof. Macoun, in introducing his subject, suggested that it would be a source of extreme profit to provincial fruit growers if a prize were offered at each annual show—he understood the fair would take place annually—for the best nursery stock, to be judged by experts. This would arouse keen competition among the nursery stock growers and after the judging those interested in fruit stock would be able to acquire a good knowledge as to the best classes of nursery stock. In the course of his address, he pointed out that whether or not the stock would be climaticized in a certain place was not to be judged by a similarity to climatic conditions where the stock originated, but where it had stood or endured the climate for some time. If hardy varieties are obtained from the much warmer climates to the south of us, he said, they are equally as good as our home grown stock.

THE AFTERNOON'S PROCEEDINGS

A meeting took place in the board of trade rooms in the afternoon, at which G. H. Vroom presided.

R. W. Starr, veteran orchardist of Wolfville, N. S., addressed the association on the varieties of apples, plums and pears most suitable for New Brunswick. He gave a list of the apples that had been found most profitable in Nova Scotia, beginning with a few varieties most suitable for family use, which, he said, should be the first consideration in planting an orchard. He also spoke on the varieties which were most in demand on the British market. These latter were, he said the Ribston, Pippin, Blenheim, Kings, Baldwin, R. I. Greenings, Nonpareils and Golden Russets. Regarding pears and plums, he stated that the conditions for growing these were better in Nova Scotia than in New Brunswick, where the varieties must be tested by the fruit growers themselves.

Prof. J. W. Crow followed with an interesting address on the pollination of tree fruits. He showed from several tests which had been made that some varieties of apples were not self pollinizers. The Northern Spy, he said, was especially deficient in this regard. It followed that if such apples were planted in large blocks there would be practically no crops of fruit. This condition applied in some extent to nearly every variety of apples. It was therefore very desirable that varieties should be set in rows of not more than three of any variety to-

gether. The mixing of the varieties in this way would insure proper pollination and better crops of fruit.

ORCHARDS

Prof. Macoun spoke on the managing of bearing orchards. He discussed his subject under the four headings of cultivation, pruning, spraying and fertilizing. He advocated a clean cultivation of orchards in the early part of the season with the sowing of a cover crop in the latter part of June or in the first of July. Pruning, he said, should be as light as possible, simply cutting out the branches which cross one another in the centre of a tree, and all dead or diseased branches. Spraying must be thoroughly done, first at the time when the leaf buds are breaking; second, spraying within a week after the falling of the blossom, and these are better to be followed by two sprayings within a fortnight of each other. The fertilizing depended largely upon the condition of the soil. Proper food, however, must be given to fruit trees, as well as to any other growing crop. This could be done either by the application of barn-yard manure or commercial fertilizers.

The control of the Brown Tail Moth and Other Orchard Pests was the subject of a most interesting and instructive illustrated lecture given by R. C. Treherne in the Natural History Society rooms last evening, before the members of the Fruit Growers' Association and a large attendance of visitors. Mr. Treherne was introduced by Hon. Robert Maxwell, who presided at the meeting. By the aid of the canvas on which was reflected views of the different insects, he pointed out their distinguishing characteristics and told how means could be taken to bring about their destruction. Two types of insects were shown, the biting and the sucking insects. Of the latter class, the codling moth was mentioned as being the most serious pest found in this province, irrespective of the brown tail and other famous moths. At the stage immediately following the development of the egg of this moth, its caterpillar was to be found in the calyx. This caterpillar could be destroyed by the spraying of the calyx tube with arsenic lead. It was necessary, however, that this spraying be done before the fertilizing of the apple.

THE DEADLY BROWN-TAIL MOTH.

After showing the brown tail moth, pointing out the distinguishing characteristics by which it could be known, he then gave a brief history of this menacing pest. The moth had been imported into Massachusetts in 1897. Confirmed inquiry showed that species of it had been imported from European countries by the means of nursery stock. The unfortunate part was that it brought none of its natural enemies with it, thus giving it a free hand to multiply. The eggs appear first in a mass numbering about 200. After about three weeks the eggs develop into a caterpillar a quarter of an inch long. Although the caterpillars start in feeding upon the leaves immediately their destructive work is not noticed. In the winter time the caterpillars gather together and form a silken thread. In the summer time they come out of the thread and the real work of destruction commences.

Hon. D. V. Landry, commissioner of agriculture, said that he had visited the fair and was not only pleased but surprised at the excellency of the exhibit there. The old government five or six years ago, had started an experimental orchard farm and the work commenced by them has since been carried on by the present administration. He congratulated the fruit growing association for work which they have done and urged all those interested in fruit growing to become members of the association.

WILL HAND OVER COMMAND TO HIS SUCCESSOR

San Salvador, Nov. 2.—It is reported here that General Jose Vallaradarez ex-governor of Amalapa, Honduras, who was deposed from office by president Davila and recalled to Tegucigalpa has returned to Amalapa in order to hand over his command to his successor, and has openly declared himself against the government. It is also rumored that he attacked the American consular agency and has committed other excesses.

Had a Distressing, Tickling Sensation in The Throat COULD NOT SLEEP AT NIGHT

Dr. Wood's Norway Pine Syrup is rich in the lung-healing virtues of the Norway pine tree. It is a pleasant, safe and effectual medicine that may be confidentially relied upon as a specific for Coughs, Colds, Bronchitis, Hoarseness, Sore Throat, Quinsy, and all Throat and Lung Troubles.

It will stop that tickling in the throat which causes the dry cough that keeps you awake at night.

Mrs. J. A. Smith, Marshville, Ont., writes:—"I had a very bad cough and that distressing tickling sensation in my throat. It was so bad I could not sleep at night and my lungs were so sore I had to give up work."

"Our doctor gave me medicine but it did me no good, so I got a bottle of Dr. Wood's Pine Syrup, and by the time I had used two bottles I was entirely cured. I am always recommending it to my friends."

Do not be humbugged into buying the so-called Norway Pine Syrups but be sure and insist on "Dr. Wood's." It is put up in a yellow wrapper; three pine trees the trade mark; the price 25c.

Manufactured only by The T. Milburn Co., Toronto, Ont.

BRIDAL COUPLE

TIRED OF LIFE

New York, Nov. 1.—A suicide pact entered into by a despondent young couple on the upper west side of the city, and carried into at least partially successful execution was revealed this afternoon when a relative of Mr. and Mrs. Torrea broke into their rooms. Torrea was found dead in bed and his young wife, partially overcome by gas, and a wound in the left wrist, calmly waiting for her life to end.

When Mrs. Torrea was revived in the hospital to which she was taken a prisoner, she said that the knife wound had been inflicted by her husband in the carrying out of the suicide agreement which they made this morning. She told the police that her husband had first cut a deep incision in her left arm and then slashed his own right arm. He then turned on the gas and they lay down to die.

The Torreas were married only on Oct. 17 last. The smell of escaping gas from the room led to the discovery of the dead man and his wounded wife.

REVOLUTION RUMORS

WITHOUT FOUNDATION

Madrid, Nov. 2.—The rumors of revolutionary outbreaks in Spain, particularly in Barcelona, are without foundation. Calm is reported throughout the country. The above despatch received from Madrid of the rumors given currency last night of a revolutionary outbreak in Spain. A despatch from Paris to the London Daily Telegraph stated that a rebellion had begun in Madrid.

Paris, Nov. 2.—Last night's rumor of a revolution in Spain, and of which there was no subsequent confirmation, reached the Gauls but was not published. According to the report an outbreak had occurred at Barcelona, resulting in several persons being killed or injured. Nothing whatever in support of the rumor developed.
