

Carriages and Express Wagons

Our own make and from the factory that has supplied us ever since we have been in business. Our purpose is to sell only good, reliable work and we can refer to hundreds of satisfied customers.

The following is from a letter just lately received:
"St. John, N. B., May 9, 1910.
Messrs. J. Clark & Son, Fredericton, N. B.:
Gentlemen:—

The carriage arrived at our home on Saturday afternoon and each of the members of my family were delighted with it, and personally, I agree with their views.
It affords me much pleasure to hand you a check for the amount due."
We have a large stock to select from.

THE STANDARD OF CANADA

Features of The Monitor Generator—Cleanliness, Safety, Economy, Odorless, Easy to Charge, Perfectly Automatic. All day service. Guaranteed to give Perfect Satisfaction.

The Monitor Manufacturing Co. Ltd.

FREDERICTON, N. B. 222 WESTMORLAND STREET

Give your servants **GOLD DUST** to clean with, treat them rightly and you will have few occasions to insert a "help wanted" ad

They say a good workman is known by his tools. You cannot expect your maid to keep everything ship-shape unless you give her every modern help. To keep house without **GOLD DUST** is to do work by hard, old-fashioned methods. For cleaning everything and anything about the house—from cellar to attic—**GOLD DUST** is worth its weight in gold. It cuts grease and dirt like magic, does away with scouring and scrubbing, and saves time and tempers.

Your servant can do more and better work and keep sweet with the aid of **GOLD DUST** in all household cleaning.

Made by **THE N. K. FAIRBANK COMPANY**
Makers of FAIRY SOAP, the oval cake.

THE MINERAL WEALTH OF THE DOMINION

Canada Has the Greatest Wealth of Undeveloped Minerals of Any Country in the World—The Opening Up of the Railways Has Been the Main Factor in its Discovery.

That the value of the mineral output of Canada in 1909 was \$30,000,000, an increase of 50 per cent. over that of five years ago, was one of the impressive facts given by Prof. W. G. Miller, Provincial Geologist, in a recent address before the Empire Club at Toronto. Yet great as the development of the mineral industry of the country has been, he showed that there was large room for expansion. The mineral production per capita of the United States mines is \$25, while that of Canada is only about \$12.50. Of the freight carried by American railways, 65 per cent. is minerals or mineral products, and an even greater proportion might be carried by Canadian roads if the possible developments were realized. There was no doubt, said Prof. Miller, that in a few years Canada would be one of the greatest mineral countries in the world.

The present output of the mines of Ontario is worth about \$40,000,000 at the works or mines. The net value of the output is about \$33,000,000 or one-third that of the whole Dominion, although this Province has no coal as Nova Scotia and British Columbia have. In 1899 the output was valued at \$8,000,000, so that there has been a four-fold increase in ten years.

The railway development of Canada will, Prof. Miller expects, bring more mineral discoveries, just as the Canadian Pacific discovered the Sudbury camp, and the Temiskaming and Northern Ontario discovered Cobalt. Sudbury, he said, has more mineral in sight than any other camp on the continent or in the world, and will last for many generations, and the Ontario Government's road, projected to develop the agricultural regions of the north, in discovering Cobalt, made known for the first time the existence of precious metals east of the Rockies. From that camp there had been a production of \$25,000,000 worth to date, and nearly \$20,000,000 distributed in dividends, though the area is only about four or five square miles. The National Transcontinental, which has easily doubled the accessible area in Canada, with the Canadian Northern, and the line from Edmonton to Fort McMurray, and the line to which the Dominion Government seems committed, to run to Hudson's Bay, would make accessible large areas of land rich in minerals, for the rocks there were of the same formation as those in Michigan and Minnesota, which made those States world-famous for their iron ore and copper. Prof. Miller was confident that the line to Hudson's Bay would pay, because of the minerals and fisheries, even though not a car-load of grain were shipped over it.

With regard to the possibilities of mineral development in the Rocky Mountains, the speaker mentioned that Mexico, having 1,750 miles of the same range, had had a production of \$5,500,000,000 worth of precious metals, or about \$3,000,000 per mile in length; and the United States had about the same relative production; while Canada has 1,600 miles of the same range, and only the fringe of it has been developed.

"At present," said Prof. Miller, "we have the greatest undeveloped mineral territory in the world, offering the greatest opportunity to capitalists and prospectors." He said that as Canada has the most ancient rocks of the continent and of the world it is not surprising to find its minerals unique, just as the fauna of Australia, representing a past age, are unique, with marsupials like the kangaroo, and creatures that are a cross between birds and mammals. In like manner, Canada's minerals are in many respects unique. She produces in a small area in Quebec, 80 per cent. of the world's consumption of asbestos used for drop-curtains, firemen's clothing, etc. In Ontario and Quebec is found practically all the world uses of amber-colored mica, or isinglass, the best for electrical purposes. About 65 per cent. of the nickel is produced in Ontario, the only competitor being New Caledonia, a penal colony in the Southern Pacific, which is not able to keep up with Canada. There is also cobalt in greater abundance than in New Caledonia, the Dominion's only rival, which has had to close its mines, and the price has been brought down from \$2.50 a pound to 75 cents. The cobalt is used to give a silvery tinge to the nickel. The Sudbury mines contain nickel and copper, and it has been found possible to get rid of the slag by a process that leaves the two metals together, making a fine alloy called monal metal, 68 per cent. nickel and 32 per cent. copper. The speaker showed samples of nickel coinage, which he hoped the Government would introduce to replace the five-cent pieces, as it was much superior to the American nickel, which wears greasy.

A pretty garnish for a boiled fowl is made by boiling either carrot or beetroot, and cutting it into fancy shapes with a vegetable cutter.

HOW TO LIVE ON A DOLLAR A WEEK

(Montreal Star.)

In these days when the cost of living weighs on no class more heavily than on the sturdy and ambitious young men who are "pulling themselves through college" by dint of devoting all their spare time and some that should not be spared to earning their expenses, there is more than a casual interest in the announcement which has just been made in Boston of what a Harvard student has managed to do. The story is told by E. E. M. Long, a senior in the university who has shown that it is possible to be a star student and a star football player at the same time, and still keep one's expenditure for food down to one dollar a week. In case there should be any doubt as to Long's physique, stamina, and endurance, it may be added that the records of the university gymnasium show him to be the third strongest man attending the institution.

All through his college course, Long has lived on a dollar a week—the first year because he had to do it or give up his college course, and the other three because he had found that the regimen was not only sufficient but health-giving. In explaining how he did it, the other day, he said:

"It is easy enough to live on fourteen or fifteen cents a day when you have worked it out to two things—system and habit. First a man has got to find out the greatest amount of nourishment that a given allowance of money will buy, and so arrange his diet that it will best fit his individual needs. That's system. Second, he has got to get used to eating those things right along and forget the saw that variety is the spice of life, and that's habit."

All the system in the world added to the best habits that ever came out of a Sunday School, however, would not have made it possible for a healthy college student to live and play football on a fifteen-cents-a-day diet unless there were peculiar facilities at the institution he attended.

SMALLPOX HOLDS UP STEERAGE PASSENGERS

New York, N. Y., May 23—Discovery of a case of smallpox on the steamer Birma, resulted in the detention of the vessel today on her arrival from Libau and Copenhagen. The patient is a child who travelled in the steerage with more than 800 passengers. A number of these will be held for observation on Hoffman Island. The little patient was also taken and the steamer will be disinfecting.

ELECTRIC LIGHT ASSOCIATION MEETING

St. Louis, Mo., May 23—Two thousand members to the National Electric Light Association Convention which will open tomorrow, have arrived in the city today and by tomorrow it is expected that nearly the entire membership of five thousand will be here.

St. Louis, Mo., May 23—Frank W. Frueauff of Denver and New York will deliver his presidential address tomorrow morning. An electrical show at which the latest electrical inventions will be exhibited will follow the convention.

"It is good of you to spare a little time for the flowers!" Did your wife ever say that to you? She will if you give her a little lift now and then out in the yard.

for carrying out his plan of living. For instance, Long explains that at one of the Commons, it was possible to get bread and a cereal for three cents and that this made a good breakfast. For lunch, cream toast or some vegetables could be obtained for as much more. This left nine cents for a good heavy dinner. Long's own deduction, after nearly four years of this kind of a diet, is that ninety-nine people out of a hundred eat too much for their own good, which entitles him to rank as a philosopher as well as a student and an athlete.

MAYOR'S SALARY 50 CTS. ALDERMEN'S 25 CTS. AND NO CHANGE FOR GRAFT

Chicago, May 24—The people of Hoopston, Ill., have re-elected Mayor C. H. Finley. He has also been presented with a check for his annual salary, 50 cents. The eight aldermen receive 25 cents a year salary.

"The City Attorney and the City Clerk are allowed to serve more than one-two year term," said City Clerk Decker. "The City Treasurer is forbidden to serve more than one term, and as to the Mayor's—well, they won't, if they can help it. We've had Mayors here in business who have given more time to the city's work than they've given to their own, and at 50 cents a year there's no money in it—and certainly no graft."

The town has a population of 6,000 and many industries. Prior to the panic of 1898 the Mayor received \$1 a year and Aldermen 50 cents. Owing to hard times they agreed to cut their salaries in half and they have not been restored to the old figures.

CANADA'S RELATION TO THE EMPIRE

"Daughter am I in my mother's house, but mistress in my own."—Kipling.

Canada contains one-third of the area of the British Empire of 2,744,695 square miles. Canada is as large as thirty British Isles, twice the size of British India, and one-third larger than Australia.

More than one-half of the white population of the Empire's Dominions and colonies, is in Canada.

Canada was the first colony of the empire to scatter provinces into a Dominion, in 1867, an example since followed in part by Australia, and by South Africa.

Canada was the first colony of the Empire to have a penny post. Canada made possible the all-British Pacific cable by contributing 5-17th of its cost.

Canada is agitating for the All-Red steamship and railway route around the world via the Empire.

Canada was the first of the colonies to establish Government wireless telegraph stations.

Canada is already helping to feed the Motherland with her surplus products and is destined to become "the granary of the Empire."

Canada is working out problems in legislation and government, the results of which will benefit the rest of the Empire, as their experiments will be value to Canada.

A STIMULUS TO ALL THAT IS BEST.

"To continue our relations with the British Empire is to preserve the continuity of our institutions, our models in statesmanship and in government is to preserve all that has entered our thoughts and lives of the achievements of her statesmen, her soldiers and sailors, her leaders in religious thought, her great scholars and thinkers, her enterprise her courage and her confidence in her own right arm in days of trial and amid the storm of dissolving nations, as when Pitt said of her at the close of the war with Napoleon, 'she saved herself by her exertions and could be trusted to save Europe by her example.' To continue our relations with an empire so renowned is a stimulus to all that is best in human nature which we cannot afford to forego."—Hon. G. W. Ross.

LAKEVILLE CORNER.

May 21.—The weather for the past week has been delightful, of which the farmers have taken advantage. In fact some are about through planting.

Quite a few residents of this place burned the "midnight oil," awaiting the coming of the comet, but, as yet, their expectation has not been realized.

Our teacher, Miss Edith Holden, has gone to spend a few days with her mother at Oromocto.

Mrs. Frederick Briggs, of French Lake, is the guest of Mrs. Lorenzo Briggs.

The stork recently visited the home of Mr. and Mrs. Walter Hargrove, and presented them with a young son.

Miss Viola London has returned home from Newcastle, Queens County, where she has been visiting relatives.

Mr. Wesley Upton has returned to St. John after spending a few days with his family.

The Misses Edna and Georgia Briggs are suffering from an attack of la grippe.

The fishing industry is in advance of preceding years, as some shad have already been netted.

When having hair treated avoid rich foods, late hours. Take brisk walks daily, or twice a day if inclined to weakness that prevents much walking at a time. Do not exercise to the point of fatigue. Rest when you feel tired, but if possible take your daily rests on a porch, or, better yet, on a sunny roof.

Seed Time is Here

We carry a large stock of W. ATLEE BURPEE & CO'S CELEBRATED SEEDS, for which we are the sole agents. They are acknowledged to be the Best Seeds that grow. Send in your orders. We are agents for Kanteek Rubber Co's Goods, which we sell with a Two year guarantee.

George Y. Dibblee Druggist and Seedsman.

Why Have an Overheated Kitchen in Summer?

When the sultry days come and the coal range makes the kitchen almost unbearable and cooking a dreaded task, put out the range fire and try the newest method of cooking in hot weather—use a

New Perfection

WICK BLUE FLAME

Oil Cook-stove

What a contrast! The kitchen no longer is stifling hot, the work is now done with comfort, and the housewife is not worn out with the heat.

She saves her strength, keeps her health and is better able to enjoy the summer.

The New Perfection does everything that any other stove can do—all the family cooking, baking, washing and ironing. No smoke, no dust, no odor. Heat is applied directly and not wasted. A turn, and the flame is out.

The New Perfection stove has a Cabinet Top with shelf for keeping plates and food hot, drop shelves for the coffee pot or saucepans, and nickle towel racks.

It has long turquoise-blue enamel chimneys. The nickel finish, with the bright blue of the chimneys, makes the stove very attractive and invites cleanliness. Made with 1, 2 and 3 burners; the 2 and 3-burner stoves can be had with or without Cabinet.

Every dealer everywhere; if not at yours, write for Descriptive Circular to the nearest agency of the
