A WAIF'S FORTUNES

(Continued.)

"Oh, thank you, Mr. Santry."

"What have you been doing to your hair, Rosalie?"

"Miss Pennington likes it like this."

"Did she. The women will never forgive you for your face. I wonder she did not want you to cut off your curls instead of trying to hide them."

He was pulling off her gloves as he spoke, and he uttered an exclamation of dismay.

"They have been letting you spoil your hands, as if such hands are not rare enough already, and beauty is not to be revered!"

"Are they spoiled?" she asked, anxiously. "I was hoping I might earn some money as a model. I know it's difficult to get good hands and feet. I used to hear Gerome and his friends talking, you see. When he first knew me my hands were rough and red, but they grew white and pretty afterwards."

"They are not so beautiful as they ought to have been," said Santry, looking down on them, "but they would set any artist raving all the same. How could you be!"

"I'm tired and hungry," Rosalie confessed. "But it is so comfortable here and so nice to have someone kind to me again!"

"You poor little soul! You shan't be unhappy any longer."

She gave him a trustful April smile, feeling comfort in the clasp of the soft, warm hands on hers, and in the kindly tones and looks of her lover's old friend.

They lunched in the studio, and Rosalie felt like one who has been exiled from her native land and returns to find a welcome there.

This painter's studio was not like the spacious room devoted to the sculptor's works, but the atmosphere of art was there and the beauty of form and color that she loved.

Santry was a delightful companion, and it was delicious to be petted again. When the servant had left them, he sat down beside her on a sofa near the fire, and she told him of her life at Miss Pennington's.

Outside the sleet was falling, and the wind was icy cold. The streets of the great city were grey and muddy under skies of grey. But here was warmth and shelter and sympathy.

"You were right to come to me, Rosalie," said Santry, and as he spoke he put his arm round her, drawing her close to his side.

The girl yielded contentedly. Since she had left Mrs. Annesley she had known no caress. Even when Santry bent down and kissed her she accepted the kiss as an evidence of fatherly kindness.

"You must let me take care of you now dear," he said.

"Shall I be able to earn money as a model, and will you help me?" she asked.

"I shall not let you sit to anyone else," he said, laughing softly. "You are going to be my little girl, you know."

Rosalie's heart began to beat fast with a vague, undefined feeling of alarm.

"I may sit to you?" she said, trying to move away.

"No. And you shall have all you

HINTS FOR THE LADIES

White furniture may be cleaned by dissolving baking soda in warm water and applying the solution to the furniture and drying with a dry cloth afterward. Fingermarks and dirt are easily removed in this simple way.

Wash tan shoes with soap and water and dry them before applying tan shoe dressing, for in this way many stains are removed instead of being covered. Washing tan shoes with warm, sweet milk now and then will prevent them from turning so dark. The same directions for cleaning tan shoes may be applied to tan leather suitcases.

More room may be made in a closet for such things as shirtwaists and children's washdresses by following this plan. Place small screweyes on opposite walls, near the ceiling. To one screweye fasten a stout cord; on the cord place several curtain rings then pass the cord through the other screweye, making at the end a loop to be slipped over a hook within easy reach. When the shirtwaists or little dresses are to be put away, first pass a safety-pin through the neckband of the garment; next take the loop of the cord so as to lower the cord above you until you can reach a curtain ring and slip the safety-pin into the hole of the ring; finally, replace the loop on the hook, and the clean garment will be suspended in the unused space at the top of the closet until needed.

Put left-over berries in a glass jar and then set the jar away in the refrigerator, as the fruit will keep in better condition than if left in an open dish. Screw the cover on, to make the jar air-tight.

To heat water without a fire fasten a strong hook over the kitchen table and from it suspend a good-sized tin bucket with a closely-fitting lid. Fill the bucket with cold water and underneath it, on the table, place a lighted lamp leaving a space of a couple of inches or more between the top of the lamp chimney and the bottom of the bucket. This idea is, of course, suggested for those who have no gas stoves and wish to heat water to wash the dishes after a cold supper. If the lamp is lighted under the bucket of water when the family sits down for supper the water will probably be warm enough by the time the meal is over.

Strings for vines to climb on if attached to nails three or four inches long that are pushed into the ground, will remain in place, as the head of the nail prevents the string from slipping off.

A hat-tree for a summer cottage may be made of a young sapling. The white birch is very pretty used in this way. Select a small tree, about six or seven feet high, having a number of branches at regular intervals. Trim off these branches to a convenient length for hanging hats and coats, bore slanting holes in the butt ends, and put three short leas into these holes to make the tree stand alone, using the cut-off branches for legs.

THE ENORMOUS MINERAL WEALTH OF THE DOMINION

Some Possibilities Along the Line of the Grand Trunk Pacific--Minerals of all Descriptions are to be Found in Plenty in That District.

An account of the mineral wealth of the last wilderness in the 'Last West' now being opened the construction of the Grand Trunk Pacific, west from Edmonton to Prince Rupert, reveals what has been discovered since the pathfinders penetrated these wilds, only five short years ago.

Going west from Edmonton along the new line from Edmonton the first coals are found in the Pembina, Brazeau and Big Horn fields. Here bituminous coal of a high grade has been found, and boring shows that some of the seams are thick. Several large properties are to be developed. The Kananaskis Coal Company, the German Development Company, and the Canadian Northern Railway Co.—a line that will also strike for the Yellowhead—have all done prospecting work hereabouts, and conditions are good for the working of the seams.

After these fields, the next valuable seams are in the Yellowhead Pass and adjacent ground. Here bituminous coals of thirty and forty feet in thickness are found, and owing to the mountainous country they pitch considerably. The Grand Trunk Pacific and the O'Brien interests of Cobalt fame are getting busy in this district, in addition to several other concerns. This vicinity is a repetition of the Crow's Nest Pass.

Along the Fraser river and its tributary rivers some high grade coals are in evidence, especially on the Bear river, where seams of good showing have been located. On the Telkwa river the Klutnat Development Syndicate, the Transcontinental Exploration

Syndicate, and the Cassiar Coal Company have coal properties. The Telkwa coal is an anthracite quality, five to six feet thick, and lies in fairly undisturbed ground. In this region coal outcrops at Driftwood Creek, Moricetown, on the Zymoet or Copper river, on Goldstream river, and along several other creeks and rivers. Placer gold mining is active over the most of this country, quartz mining receiving little attention so far. The Guggenheim Exploration Company have properties in the Cariboo: At Hazelton a good galena vein has been struck. Past the Hazelton district many discoveries of ore and placer gold have been made in the Skeena country: Gypsum deposits are also located. Iron, zinc, platinum (with placer old and silver), and some building-stone are found in this region. To the north, oil is struck. In the Prince Rupert country a group of Canadian and American capitalists control an area of about 5,000 acres that contains gold, silver, lead and copper. Important camps are expected here soon.

The formation of the whole of this rough country is very complicated, and no attempt is made here to go into geological history. Comparatively little has been done in geological and topographic work. The real of the coalfields remains to be determined.

The numerous eruptions have an important influence on the coals, and account for the quick variation from lignites to anthracite. In all probability much faulting and contortion have taken place.

WHAT TO DO IN A THUNDERSTORM

Lightning, owing to its extreme subtlety and tremendous force, is regarded by the majority of people with distinct respect, if not absolute awe. The flash strikes terror into the hearts of people of highly strung and nervous temperament, and often in their rush for safety they act in the very way to court disaster. What should one do in a thunder-storm? On this point Mr. Killingworth Hedges, M. Inst. C. E., the well-known authority, and author of Modern Lightning-Conductors, offers some very pertinent hints in the new edition of his standard work. Sheltering under trees should be avoided, as well as standing in the vicinity of spreading branches; nor should one stand on the lee-side of a haystack or a building, as the rain dripping from the top thereof may easily lead the flash in the direction of one's person, converting one into a human lightning-conductor. Telegraph-posts should be given a wide berth, and the telephone should not be used during a storm. Lightning-conductors, rain-water pipes and such like should be avoided. If one is walking over open country and becoming saturated with the rain, the best safeguard is to crawl under a low copse or hedge. Should such be unavailable, as on a plain or moor, the safest procedure is to lie flat down. To hold up an umbrella as shelter against the rain is to seek disaster. Similarly, should one be cycling when overtaken, one should dismount and leave the cycle

on the ground. It is not that the cycle attracts the lightning, as is generally supposed, but a flash throws out innumerable branch discharges. If one's clothes are dry one may receive no further injury than a smart shock, but if the garments are sodden with rain facility may easily result. The safest place is within the house. True, the building may be struck, but the chances are very remote. If such should result, it is invariably the chimney-stack which is selected by the flash in its passages to earth, and consequently one should stand well clear of the fireplace, which invariably will be blown into the room. Hot-water and other pipes should likewise be avoided. The windows should be shut, for glass is an excellent insulator, and will not attract lightning, as is popularly believed. One should not sit in a conservatory or green-house, for the trailing wires and general metallic-work may be highly charged with electricity resulting from a flash; and one should not shelter in a farm building where animals are collected. Lightning is most erratic in its selection of convenient channels for its passage to the ground; but if the foregoing hints are borne in mind a person caught in a storm is less likely to be a victim to its caprices.—Chamber's Journal.

Ready—"Me good fellow," said the English tourist, "kin you direct me drink?" "Well," replied the thirsty to a place where one may get a good native, "I kin direct yer better to a place where two kin git a good drink

2591.

GIRLS' JUMPER DRESS. Paris Pattern No. 2591

All Seams Allowed.

Closing at the back and having the plaited skirt joined to the waist under the belt, this little frock is simple in construction and becoming when worn. The material used in its development is navy blue serge, with trimming bands and belt of blue and black striped taffeta silk; three small buttons ornamenting the front trimming band. The wide tuck over the shoulders gives a broad-shouldered appearance, which is very becoming. The guimpe, which is made with long or three-quarter length sleeves, is of silk or lawn, according to taste, the collar and cuffs being trimmed with insertions of lace. The pattern is in 5 sizes—6 to 14 years. For a girl of 10 years the dress requires 4½ yards of material 27 inches wide, 3¼ yards 36 inches wide, or 3 yards 42 inches wide; 3½ yards of taffeta, the guimpe needs 3 yards 18 inches wide, or 1¼ yards 36 inches wide; 2¼ yards of insertion.

Price of pattern, 10 cents.

TWINS INTRODUCED

Pittsburg, July 26—Amos and Cyrus Lape, born together in Black Lick Indiana County, thirty-nine years ago, are acquainted for the first time. On account of the mother's death, the twins were separated at birth to live with different families, and never knew each other. The reunion, which is now being celebrated, was brought about by accident. A stranger met Amos at work in Export, and exclaimed, "Hello, Cy; what are you doing here in Export?" Amos demurred. "But I am not Cy. I am Amos Lape. I have heard I had a twin brother named Cyrus, but never saw him. Do you know him?"

"Well, rather, said the stranger. He's a neighbor of mine at Dunbar, Fayette County. I'll lead you to him" and he did.

Soap-making is declared by the British Consul to be the most important industry in Jerusalem, and next to it comes the manufacture of so-called religious articles.

Even the girl who prides herself on her self-possession gives it up when the right man asks for it.
