## HEAT OF SUN IS SLOWLY LESSENING

With the Passing of Old "Sol's" Warmth Humanity Will Cease to Live

The sun is a mass of blazing heat gases 1,300,000 times larger than the earth. Its temperature varies between 8,000 and 12,000 degrees. However vast its heat may be, it can be no exception to the common law of matter. Every day it loses some of its heat and is gradually growing colder. A moment will come inevitably when its radiation will grow weaker, and after that will cease altogether. That will mean death for us in cold and darkness.

There is nothing surprising in this deduction. Millions of extinct sun which were once like our luminary are known to exist in the heavens. Every star is born and lives to die. The problem is to fix the date of its extinction.

In the opinion of many scientists the American astronomer who has threatened us with death in 5,000,000 years has added nothing new to this subject, which scientists have discussed with good arguments for some 50 years.

The first question we must ask is where did the sun obtain the heat with which it maintains our life? In a manner so constant? Without doubt we can observe in the sun certain variations of heat. Our winters and summers are not exactly alike, but these variations are comparatively small. They are subject to a periodic flux, which brings back nearly the same condition after a certain lapse of time. The climate of the earth has not changed within historic times. Before long we shall experience exceptionally severe winters and torrid summers. What colossal source of power keeps up the sun in this manner? With what mysterious substances is this enormous furnace fed?

The physicists, Mayer and Helmoltz, have given the best answers to this question. The sun was originally much larger than it is at present. In obedience to the laws of attraction, gaseous masses contract and become smaller. The laws of physics teach us that under these conditions a gas may recover the heat which radiation causes it to lose and which is distributed in surrounding space. Calculations show that a contraction of 25 inches a year in the diameter of the sun would cause its heat to remain constant for thousands of years. The sun has a diameter of 926,964 miles. Even supposing the diminution mentioned occurred, no instrument could reveal the change in its diameter in a period of ten centuries.

Thus, according to the mechanical theory of heat, astronomers who may live in the year 12000 of our era will be able to know what the sun's diameter has diminished about five miles since the beginning of telescopic observation.

In 7,000,000 years the sun will still radiate the same quantity of heat, but its disc will appear to man one-fourth of its present size. From that moment nothing will be able to check the loss of heat which it will undergo through radiation. The average temperature of the earth will show the effect. In our northern countries vegetation will lose a large part of its vitality. The crops will no longer ripen, and the people will press toward the equatorial region. A few million years after that all earthly life will become impossible. The sun will be covered with dark spots, which will gradually grow larger and larger.

### Sun Will Lose Light

In a few tens of millions of years after that the sun will have lost its place among the light-giving bodies of the heavens. It will become a black and invisible body, a dangerous derelict of the millions of stars moving through space, but it will still continue its course through space.

From these facts and arguments we may conclude that humanity will still exist for 10,000,000 years, or perhaps 15,000,000 at the utmost. We must, however, remember that accidents may occur to shorten this life. A healthy man may reasonably expect to live to 80, but an automobile may end his career in an hour or a day. So it is with our earth.

If he earth dies in the fullness of time it will die from cold in, say, 10,000,000 or 15,000,000 years from now, but there is a host of other dangers that menace humanity. In the ceaseless journey which the earth makes around the sun at the rate of 90 1-3 miles a second, may it not some day come into collision with the heart of a colossal comet? In such a case humanity may witness a frightful spectacle, a dreadful prelude to universal death. What astronomer can assure us that a collision will not occur within a few years? Barring such an accident, however, the end of the earth from cold must be regarded as fixed.

## CORONATION OF THE SHA OF PERSIA

Teheran, Persia, July 21—The coronation of Sultan Ahmed Mirza, Shah of Persia, for which event preparations have been going forward for several years, took place today with the accompaniment of all the solemnities which the custom of centuries has prescribed for the occasion. Ahmed Mirza, who is not yet seventeen years old, came to the throne four years ago, following the insurrection which caused his father to abdicate and flee the country.

Foreign nations were not invited to send special embassies to the coronation as is usually the custom. Two reasons existed for the omission of this feature of the coronation program. The first was the long and difficult journey which most of the foreign envoys would have been obliged to take in order to reach Teheran. The second, and principal, reason was that the Persian government did not care to incur the great expense for the entertainment of the foreign visitors, in view of the depleted condition of the national treasury.

The coronation was attended, however, by all of the leading men of the nation and by many of the Persian representatives abroad. Among those present were General Mahdi Khan, the Persian minister at Washington, and H. H. Topakyan, the consul general of Persia in New York.

Chances are she has corns that ache like fury. Buy her a bottle of Putnam's Corn Extractor. It acts painlessly, gives instant relief and cures every kind of corn. Insist on getting only Putnam's Extractor, 25c. a all dealers.

## ROBINSON CIRCUS PARADE A BIG ONE

(Montreal News.)

The good old circus with its gleam of its glitter and gold, has once more invaded the town, and promises to be the Mecca for all whose hearts are young during the joyous day, circus day.

First of all in this morning's arrival of the Robinson Famous Shows came the rumbling wagons bearing the commissary equipment—the gigantic ranges heated entirely by steam, the dining tents with their long tables and spotlessly white linen and everything necessary to furnish breakfast for the immense circus family of 300 people, who three times each day gather about the boards.

With breakfast over active preparations were begun for the parade. It left the show grounds shortly after 10 o'clock. It was a marvel of circus beauty. There was a long line of the fantastic finery, half a dozen bands, ponderous elephants, camels, those ships of the desert which go eight days without water and horses; well, a small boy said there must have been a million of them.

Following the parade, the show grounds appeared to be the objective point. Everything was in readiness to the big show were opened promptly at one o'clock. One hour was allotted to the spectators for viewing the wonderful Robinson collection of wild animals. Preceding the big show by thirty minutes a concert was given by Prof. Richard Master's royal military band.

Among the many exciting and novel acts are the Nine Nelson Family of Acrobats and Wire Artists. They range from little tots of three up to sixteen years of age, one of whom turns thirty backward flip-flops on an elevated pedestal. The tango horse, "King George," is a beauty as well as a wonderful performer. The three Laurette Sisters perform a startling and thrilling iron jaw aerial act. Steve Miaco's thirty funny clowns and many other acts of merit filled out a splendid program.

This show is coming to Fredericton on Friday, July 24.

## PERSISTENCY IN ADVERTISING

One stroke of a bell in a thick fog does not give a lasting impression of its location, but when followed by repeated strokes at regular strokes at regular intervals the densest fog, the darkest night can not long conceal its whereabouts. Likewise a single insertion of an advertisement---as compared with regular and systematic ADVERTISING---is in its effect not unlike a sound which, heard but faintly once is lost in space and soon forgot---Printing Art.
