APPLIED IN 5 SECONDS
Notwithstanding the war and the unsettled business conditions, the New Brunswick Telephone Company has enjoyed a fairly prosperous year. Thanks to this company the telephone service in this province has reached a very high state of efficiency.

Lord Kitchener has issued a call for three hundred thousand more men for active service. The call will be certain to meet with an enthusiastic response.

VICTORIA A HEALTHY CITY

Pure Milk Helps to Keep Infant Death Rate Low

Fortunate indeed is the city with such a record of good health as that of Victoria, B.C., as is shown by the report of Mr. G. A. P. Hall in the medical officer's report.

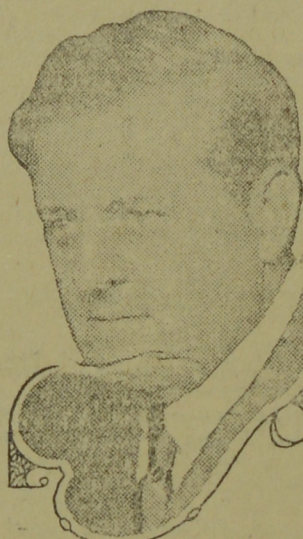

The mortality rate for the year is only 7.23 per thousand, while the infant mortality rate reached the almost incredible figure of 6 per thousand. Of 13 cases of typhoid, only five were local, the remainder coming from legging cramps.

One of the reasons for this situation is undoubtedly the care taken to ensure a pure milk supply. The examinations taken during the year show that the butter fat percentage to average 2.9 per cent, the water supply is also above reproach.

The population of Victoria is 35,000, and of the 337 deaths recorded last year 80 were over 70 years of age.

Victoria, B.C., is evidently a place where there is some competition for the position of "eldest inhabitant."

Tests Mentality of Criminals

DR. W. J. HICKSON
Dr. W. J. Hickson is Chicago's "mental examiner of delinquents." It is his duty to test the mental ability of wrongdoers. When he finds that the evil-doer has but a child's brain in a grown-up body the "criminal" is given a suspended sentence or sent to a reform school.

Water or Humus
A farmer noticed that on land which had been continually cropped for several years under water loadings there is a noticeable falling-off in the yield.

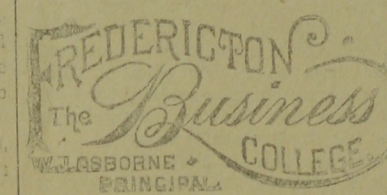

Now it has been proved that land rich in plant food will stand a drought better than land which receives a heavy rainfall and has been leached. The farmer, therefore, who builds up the plant food is building against drought. On this point Professor King on "Soil Management" writes: "Where large yields are expected it is very important to understand that less water is required for a crop, in proportion to the yield, when the soil is abundantly rich. We found that when in rich soils corn, oats and potatoes used an average of 355 pounds of water for each pound of dry product; on the same soils when they had become impoverished by repeated cropping without fertilization, the same crops used an average of 625 pounds of water for each pound of dry product."

Testing Vitality of Seeds

A simple test of the vitality of any farm or garden seeds can be made as follows: Place 100 seeds, taken at random from a sample, on a dish of sand, cover lightly with sand, moisten and keep in a warm place, as behind a kitchen stove, until the sprouts appear. The number of sprouts which appear will give an idea of the percentage which may be expected to grow. It is advisable to make more than one test and be guided by the average results. A test of this kind is considered more trustworthy than

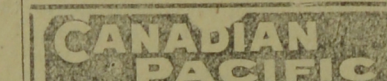

OBSERVE THE LAW.
Under the provisions of an act passed by the dominion parliament, all butter exposed for sale in bricks must be covered with a printed wrapper. Bring your butter paper to The Mail Office and have it neatly printed. Or if you prefer, we will supply the paper. One thousand wrappers, neatly printed, will cost you \$3.00, or for \$1.75 we will print five hundred. Send in your order and save a fine.
