Poetry.

Watch, Mother. The following, entitled "Watch, Mother," is one of those little gems which touch the heart :

MOTHER! watch the little feet Climbing o'er the garden will,
Bounding through the busy atreet,
Ranging cellar, shed and hall,
Never count the moments lost,
Never mind the time it costs; Little feet will go astray; Guide them, mother, while you may.

Mother! watch the little hand
Picking berries by the way,
Making houses in the sand,
Tossing up the fragrant hay.
Never dare the question ask,
"Why to me this weary task?"
These same little hands may prove
Measengers of light and love.

Mother! watch the little tongue
Prattling, eloquent and wild,
What is said and what is sung
By the happy, joyous child.
Catch the word while yet unspoken,
Stop the vew before 'tis broken;
This same tongue may yet proclaim
Blessings in a Savior's name.

Mother! watch the little heart
Beating soft and warm for you;
Wholesome lessons now impart;
Keep, O keep that young heart true, Extracting every weed, Sowing good and precious seed; Harvest rich you then may see, Ripening for eternity.

Miscellaneous.

THE LATEST WONDER. (From the Montreal Gazette.)

The Enniskillan Oil Wells of Upper Canada are the latest wonder; and a wonder moreover to be regarded with interest by the Province.

Mr. T. Sterry Hunt, Chemist and Mineralogist to the Geological Society, is now engaged in an exploration of the Oil region on behalf of the survey. He has found a state of things more wonderful than he or others had imagined; and if a good market can be found for the oil, there is in that locality greater natural wealth than can well be calculated. We have been favored, for publication, with an extract from a private letter of Mr. Hunt, which we are sure the readers of the Montreal Gazette will peruse with interest. Dating Sarnia, C. W., July 31st, Mr. Hunt says:—

"The late discoveries in the oil region in Black Creek, in Enniskillen, are very remark-able. Besides a great number of surface wells, i. e., wells dug from 40 to 60 feet through the drift to the rock of the country, and yielding, many of them, large quantities of oil, there are now numbers of wells bored in this rock to depths varying from 40 to 200 feet. In sinking thus through the soft limestones and marls of the Hamilton group, irregular fissures affording oil are met with at varying and uncertain depths, but yielding petroleum in quantities hitherto unexampled on the conti-nent. The most remarkable of these rock wells have been opened within these last ten days, and furnish oil with considerable quantities of gas, but without any water. Some which have been opened a week (July 30) have afforded from 200 to 400 barrels of pure oil, and after extracting this amount the well has filled up again in a few hours to the surface, and in two is now flowing over into the adjacent creek. It is impossible to say what amount of oil these wells would furnish if wrought continuously, but the supply seems to be enormeous. Meanwhile there is no market for the oil, and many thousands of barrels are stowed up in tanks and pits awaiting purchasers. A plank road is about being made to Wyoming Station on the Great Western Railway, 13 miles distant. It is hoped from recent information from England that a good market for the oil will be opened there. The results of the last ten days in this region have surpassed the dreams of the most sanguine as to the supply of oil, and judging from present appearance the wells of Ennis-killen will rival those of Burmah and Persia, which have for centuries supplied the East

"It is worthy of remark that the oil wells of Canada are in a much lower geological formation than those of Ohio and Pennsylvannia. These rise for the most part from the Upper Devonian sandstones, while the wells sunk in Enniskillen are in the Hamilton shales, and even seem to have reached the underlying Devonian limestones, with which perhaps the addition of the Silurian limestones, we con-ceive to be the source of the petroleum both in Canada and the adjacent States. It is evidently connected with the undulations subordinate to the great anticlinal axis which we have traced through Western Canada, and which permit the accumulation of the oil else-where diffused through the rocky strata."

Beverages for Warm Weather.

Cool, healthy drinks, not intoxicating, but refreshing and exhilarating, are very desirable during such weather as we have sive beverages, while others live out of a supply within the soil of complex orgatown, and are consequently unable to pro-cure them. To all such we would recommend the use of the following wholesome

ding a small piece of lemonpeel, and nough of the essence of spruce to give it oottles. Molasses or common brown sugar can be used if necessary instead of loaf, and the lemonpeel left out. Sometimes, when unable to obtain the essence of spruce, we have boiled down the twigs. will be found a delightful home

HARVEST DRINK.—Mingle together five ses, ore quart of vinegar, and two ounces powdered ginger. This drink is very rigorating, and is the same thing as Western cider," the recipe of which has en selling for a high price through the

SAM Sona.—To one gallon of water, we pounds of loaf sugar, one ounce one ounce cream of tartar, tartaric acid. Boil the ming off the refuse accumulating upon the surface.

ling, set it away in bottles in a

a. When desiring soda drinks,
or three table-spoonfuls of this be equal to that from

strain off the liquor, and add to it common the laws are such that one may sue his molasses in the proportion of one quart to neighbors for not "thistling" their land in three gallons of the beer. If it is too the proper season, or he may employ others thick, dilute it with water. A half pound | to do so at their expense. Such regulaof browned bread, added to the liquor, tions are urgently demanded in this counwill increase its richness.

COMMON SMALL-BEER .- Add to a pailful of water a handful of hops, a pint of bran, one half pint of molasses, a cup of yeast, and one large spoonful of sugar.

GINGER-BEER .- To a pail half-filled with boiling water add one pint of molasses and two spoonfuls of ginger; when well stirred, fill the pail with cold water, leaving room for one pint of yeast, which must not be put in until the preparation becomes lukewarm. Place it on a warm hearth for the night, and bottle in the morning.

Molasses Beer .- To six quarts of water add two quarts of molasses, half a pint of yeast, two spoonsful of cream of tartar. Having stirred thoroughly, add the grated peel of a lemon, Bottle after standing for twelve hours.

Agricultural.

On the Growth of Red Clover. (From the Canadian Agriculturist.)

Clover, with timothy, will, in all probability, continue to constitute in Canada, the principal material for soiling cattle or for the making of hay. These two grasses therefore are of the greatest importance in our system of agriculture, and whatever throws light on their improved culture must be regarded with special interest by our farmers generally In the older countries of Europe it is a common complaint that clover is deteriorating both as to quantity and quality; and such soils are said to be clover sick. The only effectual remedy is to extend the rotation of cropping, or to bring clover round less frequently, say at intervals of five or six years, instead of three or four, and to apply artificial manares specially suited to the wants of the plant. In this country we do not hear much complaint of this nature, still in some places of the older settled districts, the clover crop appears of late years to have been under former averages; and some change of culture is evidently required. In most cases deeper ploughing, with longer intervals between the occurrence of the same crop would unquestionably be found of great benefit. A deeper tilth would have the advantage of fixing the plant more firmly in the soil, consequently making it less liable to be thrown out by spring frosts,—the greatest injury, perhaps, to which the clover plant s subjected in this climate.

Dr. Voelcker, chemist to the Royal Agricultural Society of England, made a few years since a number of very accurate and original experiments on the growth of red | tion, which is of an agreeable flavor, will clover; and from the details of the re- not stop till they have thoroughly rooted ation of our readers.

"We are far from asserting" (remarks the Professor) "that there is evidence enough to show that the failure of clover, when grown too frequent on the same land, is altogether due to the want of a sufficient supply of certain organic compounds in the soil." At the same time, we think that the facts of agricultural and horticultural practice, as well as the evidence of direct experiment, must lead to the conclusion that the view that the organic compounds of the soil are only valuable to plants as a source of carbonic acid requires modification. It is indeed probable that some plants derive

a considerable amount of their substance from carbon compounds other than carbonic acid, and that others depend for their carbon mainly, if not exclusively, upon carbonic acid. "Such crops as, in the course of culti-

vation, are subjected to pretty natural conditions of growth, and which accumulate the greater portion of their substance during the period at which the sun's rays are known to be most powerful in influencing the decomposition of carbonic acid by plants, appear to depend chiefly on that source for their carbon. Those, on the other hand, which are grown under somewhat abnormal conditions, and which store up a large amount of succulent products been having for the past few days, with of a comparatively low degree of elaborathe thermometer ranging between eighty and ninety degrees. The soda founts and small-beer establishments of the city have tion, are probably partly dependent on the carbon compounds yielded by the soil.—

The leguminous crops, again, though combeen constantly patronized by the thirsty multitude. But a large majority of people the latter category, still seem to be depencannot afford to expend money in expendent for luxuriant growth more or less upon

"It would appear, however, that whatever may be the precise result to which investigation may lead, in regard to the WHITE SPRUCE BEER, TO MAKE .- Mix questions here involved, it may, at any ogether three pounds of loaf sugar, five rate, be pretty safely affirmed that we shall ons of water, a cup of good yeast, ad- not arrive at the true explanation of the phenomena, upon which depend some of the most striking advantages of a rotation When fermented, preserve in close of crops, until we are better able than at present to define the relations of the different crops to the different sources of carbon

nitrogen. The practical conclusions from this interesting enquiry may be very briefly stat-

When land is not what is called "clover sick;" the crop of clover may frequently be increased by top-dressings of manure containing potash and superphosphate of lime; but the high price of potash, and the uncertainty of the action of manures upon the crop, render the application of artificial manures for clover a practice of

When the land is what is called "clover sick," none of the artificial manures, whether artificial or natural, can be relied upon

to secure a crop. So far as our present knowledge goes, the only means of insuring a good crop of red clover is to allow some years to elapse before repeating the crop upon the same

Subjugate the Thistles.

The thrifty farmer will ever guard with ealous eye against the encroachments of the thistle tribe. Of all the noxious weeds which infest his soil, they are the most

try. There being none, the farmers should labor in concert for their eradication. As to the time for treating them there is some difference of opinion. The following rustic doggerel of the English farmers contains the facts of the matter in a nut-shell:

"If thistles be cut in April. They appear in a little while; If in May, They peep out the next day; If cut in June, They reappear very soon; If in July, They'll hardly die; But if out in August, Die they must!

The present month then should witness a general war of subjugation and extermination against these intruders. The annual and biennial species, among which are the musk, milk, welted or curled, slender-flowered, bull, marsh, and cotton thistle, may be "killed out" by frequently mowing them close to the surface, and rolling. They will thereby be prevented from running to seed and disseminating themselves. The perennials, of which the common sow and common field or Canada thistles are species, are the most troublesome. It is commonly recommended to cut them while in bloom an inch or two above the ground, in order that the hollow stalk may be filled with water at the first If we were certain of the rain comrain. ing with crops, corn and potatoes, for instance. Their rhizoma or subterranean stems are very tenacious of life, and lie below the usual depth of furrows, thereby rendering deep ploughing necessary. When they are confined to local spots, and just beginning to spread upon the soil, they can be cut down with the hand to advantage, but there should be no delay. Mr. D. T. Moore, in detailing his experience on this point says:-

"We are satisfied that if every Canada thistle is chopped down as soon as it makes its appearance above ground, it will soon perish; but if allowed to grow several inches in height before being cut down, the leaves will accumulate sufficient air nourishment in the roots to enable them to send out a new stock of shoots, and thus the evil continues and increases.

Common salt added to the stump after cutting off the top will hasten their death. A new plan is now pursued with success, which consists in turning a drove of hogs into the field infested by them. Having salted the tops of the thistles, the swine will soon discover them, and once having obtained a taste of the under-ground por-

Educational.

HIGH SCHOOL, SAINT JOHN, N. B.

W. HARTT, A. M., Principal and Proprietor. HIS Seminary consists of separate Male and Female Departments, under the special management and instruction of the Principal and several efficient Teachers.

The Female Department is intended to be a first class Boarding School for young Ladies, in which all the solid and Ornamental Branches of a finished Female Education will be thoroughly taught. The School is located in the most healthly and cligible part of the City, convenient to the Railway, Post Office, &c., but enjoying the quiet of a Country Village.

The Course of Instruction in both Departments

is similar, and embraces all the Branches usually taught in the best Seminaries. The Academical Year consists of Four Terms of eleven weeks each. The Summer Term of 186I will commence July 22nd. The Fall do., October 7.

TERMS: PREPARATORY CLASS-The Elementary English Latin, Greek, or French Commenced, ... \$8 "
SENIOR, or COLLEGIATE CLASS—Advanced Latin,

styles, the usual extra charges. FUEL, each Fall aud Winter, term,......50 cents. Board—exclusive of Washing, Bedding, Fuet and Lights—for young Ladies only, \$110 per an-

num.

It will be the aim of the Principal and Teachers to secure thoroughness in every department, and to spare no pains to promote the comfort, and the moral and intellectual improvement of the Young Ladies who may be entrusted to their care as Boarders, N. B.—Tuition Fees and Board, payable quan

terly, in advance. St. John, July 9th, 1861. HORTON ACADEMY.

C. SPURDEN. UNION HOTEL.

Between Charlotte & Syddey Sts., South side.

THE Proprietor of this Establishment thankful for favors received during the period he occupied the New Brunswick Hoperson the and better accommodation for the public has erected a large substantial building in Union street, capable of accommodating from seventy to eighty boarders. The house is well ventilated, the sleeping rooms are large, and every flat is well supplied with water, and also lighted with gas. The proprietor is determined to leave no means untried to merit the patronage of the community. Travellers arriving late at night will find the house always oven and ready to receive them; while the conveniences and moderate charges will render it emphatically the home of the stranger. The tables of this house will be supplied with the best the market affords, and the proprietor is determined to adhere strictly to the Total Abstinence principle.

Two large Stables have been erected on the premises, capable of accommodating from sixty to seventy horses. Good hostlers always in attendance. Between Charlotte & Syddey Sts., South side.

Medical.

Ayer's Sarsaparilla, FOR PURIFYING THE BLOOD,
And for the speedy cure of the subjoined varieties

of disease: SCROPULA AND SCROPULOUS AFFECTIONS, SUCH AS Tumors, Ulcers, Sores, Eruptions, Pimples, Pustules, Blotches, Botls, Blains, and all

OAKLAND, Ind., 6th June, 1850.

J. C. AYER & Co. Gents: I feel it my duty to acknowledge what your Sarsaparilla has done for me.
Having inherited a Screfulous infection, I have suffered from it in various ways for years. Sometimes it burst out in Uleers on my hands and arms; sometimes it turned inward and distressed me at the times it turned inward and distressed me at the stomach. Two years ago it broke out on my head and covered my scalp and ears with one sore, which was painful and loathsome beyond description. I tried many medicines and several physicians, but without much relief from anything. In fact the disorder grew worse. At length I was rejoiced to read in the Gospel Messenger that you had prepared an alterative (Sarsaparilla), for I knew from your reputation that anything you made must be good. I sent to Cincinnati and got it, and used it till it cured me. I took it, as you advise, in small doses of a teaspoonful over a month, and used almost three bottles. New and healthy skin soon began to form under the scab, which after a while fell off. My skin is now clear, and I know by my feelings that the disease is gone from my system. You can that the disease is gone from my system. You can well believe that I feel what I am saying when I tell

well believe that I feel what I am saying when I tell you that I hold you to be one of the apostles of the age, and remain ever gratefully, Yours, ALFRED B. TALLEY. St. Anthony's Fire, Rose or Erysipelas, Tetter, and Salt Rheum, Scald Head, Ring-corm, Sore Eyes, Dropsy.

Dr. Robert M. Preble writes from Salem, N. Y.,
12th Sept., 1859, that he has cured an inveterate

case of Dropsy, which threatened to terminate latally, by the persevering use of our Sarsaparilla, and also a dangerous attack of Malignant Erysipelas by large doses of the same; says he cures the common Eruptions by it constantly.

Bronchitis, Goitre, or Swelled Neck.

Zebulon Sloan, of Prospect, Texas, writes
"Three bottles of your Sarsaparilla cured me from Goitre, a bideous swelling on the neck which I had case of Dropsy, which threatened to terminate fatal-

Goitre-a hideous swelling on the neck, which I had

Goitre—a hideous swelling on the neck, which I had suffered from over two years."

Leucorrhea or Whites, Ovarian Tumor, Uterine Ulceration, Female Diseases.

Dr. J. B. S. Channing, of New York City, writes "I most cheerfully comply with the request of your agent in saying I have found your Sarsaparilla a most excellent alterative in the numerous complaints for which we employ such a remedy, but especially in Female Diseases of the Scrofulous diathesis. I have cured many inveterate cases of Leuthesis. I have cured many inveterate cases of Leucorrhea by it, and some where the complaint was caused by ulceration of the uterus. The ulceration

itself was soon cured. Nothing within my know-ledge equals it for these female derangements."

Edward S. Marrow, of Newbury, Ala., writes: Edward S. Marrow, of Newbury, Ala., writes:
"A dangerous ovarian tumor on one of the females in my family, which had defied all the remedies we could employ, has at length been completely cured by your extract of Sarsaparilla. Our physician thought nothing but extirpation could afford relief, but he advised the trial of your Sarsaparilla as the last resort before cutting, and it proved effectual. After taking your remedy eight weeks no symptom of the disease remains." of the disease remains."

Syphilis and Mercurial Disease.

NEW ORLEANS, 25th Aug., 1859.
Dr. J. C. AYER. Sir: I cheerfully comply with the request of your agent, and report to you some of the effects I have realized with your Sarsaparilla. I have cured with it, in my practice, most of the complaints for which it is recommended, and have found its effects truly wonderful in the cure of Venereal and Mercurial Disease. One of my patients had Syphilitic ulcers in his throat, which were con-suming his palate and the top of his mouth. Your Sarsaparilla, steadily taken, cured him in five weeks.
Another was attacked by secondary symptoms in his nose, and the ulceration had eaten away a considerable part of it, so that I believe the disorder would soon reach his brain and kill him. But it yielded to my administration of your Sarsaparilla; the ulcers healed, and he is well again, not of course without some disfiguration of the face. A woman who had been treated for the same disorder by mer cury was suffering from this poison in her bones. They had become so sensitive to the weather that on a damp day she suffered excruciating pain in her joints and bones. She, too, was cured entirely by formula, which your agent gave me, that this pre-paration from your laboratory must be a great re-

medy; consequently, these truly remarkable results with it have not surprised me.

Fraternally yours, G. V. LARIMER, M.D. Rheumatism, Gout, Liver Complaint.

INDEPENDENCE, Preston Co, Va., 6th July, 1859.
DR. J. C. AYER. Sir: I have been afflicted with a painful chemic Phoenetics. DR. J. C. AYER. Sir: I have been afflicted with a painful chronic Rheumatism for a long time, which baffled the skill of physicians, and stuck to me in spite of all the remedies I could find, until I tried your Sarsaparilla. One bottle cured me ir two weeks, and restored my general health so much that I am far better than before I was attacked I think it a wonderful medicine. J. FREAM.

Jules Y. Getchell, of St. Louis, writes: "I have been afflicted for years with an Affection of the Liver, which destroyed my health. I tried everything and everything failed to relieve me; and I have been a broken-down man for some years from no other. and everything failed to relieve me; and I have been a broken-down man for some years from no other cause than derangement of the Liver. My beloved pastor, the Rev. Mr. Espy, advised me to try your Sarsaparilla, because he said he knew you, and any thing you made was worth trying. By the blessing of God it has cured me, and has so purified my blood as to make a new man of me. I feel young again. The best that can be said of you is not half good enough."

good enough. good enough."

Shingus, Cancer Tumors, Enlargement, Ulceration.

Caries, and Exfoliation of the Bones.

A great variety of cases have been reported to us where cures of these formidable complaints have resulted from the use of this remedy, but our space here will not admit them. Some of them may be a supplying the complaints of the complaints have resulted from the use of this remedy, but our space here will not admit them. Some of them may be a supplying the complaints of the complaints. found in our American Almanac, which the Agents pelow named are pleased to furnish gratis to all

who call for them.

Dyspepsia, Heart Disease, Fits, Epilepsy, Melan choly, Neuralgia.

Many remarkable cures of these affections have been made by the alterative powers of this medicine. It stimulates the vital functions into vigous action, and thus overcomes disorders which would be supposed beyond its reach. Such a reme dy has long been required by the necessities of the people, and we are confident that this will do for hem all that medicine can do nem all that medicine can do.

Ayer's Cherry Pectoral.

Ayer's Cherry Pectoral.

FOR THE RAPID CURE OF

Coughs, Colds, Influenza, Hoarseness, Croup, Bron
chits, Incipient Consumption, and for the Relief of Consumptive Patients in advanced stages of the Disease.

This is a remedy so universally known to surpass
any other for the cure of throat and lung complaints, that it is useless here to publish the evidence
of its virtues. Its unrivalled excellence for coughs
and colds, and its truly wonderful cures of pulmionary disease, have made it known throughout the
civilized nations of the earth. Few are the communities, or even femilies, among them who have
not some personal experience of its effects—some
living trophy in their midst of its victory over the
subtle and dangerous disorders of the throat and
lungs. As we know the dreadful fatality of these
disorders, and as they know, too, the effects of the

lungs. As we know the dreadful fatality of these disorders, and as they know, too, the effects of the remedy, we need not do more than to assure them that it has now all the virtues that it did have when making the cures which have won so strongly upon the confidence of mankind.
