La Sauvagesse de Lorette!

Near the Lorette Falls, and within a few miles of quebec, stands a little Indian village, where a few led men rear their families in a civilized manner; quads of boys, with bows and arrows, quickly surbund any carriage, and offer to show their skill by shooting at pieces of money, which they coax the visitors to place in sticks and ram into the earth. An Indian squaw is a study. Seated on a pile of sones by the highway and near the church, surrounded by heaps of baskets and ornaments of beads, which she offers for sale, mumbling meanwhile between her toothless gums an old clay pipe, her stiffing hair capped by a well battered tall hat, discarded by some white man, she puffs away the smoke, and watches with her dark sharp eyes for customers. She wraps her ornamented petticoat and blanket about her body and shoulders, and displays her moccasins upon her feet. She looks a model of patience. Then there is the Indian Church, and a little way off the noted falls of Lorette, rattling down the locks, by the foot of the mouldering slippery steps, which the traveler is lucky to reach in safety. But the Indians are passing away. "Lo" will soon live only in history. Just thus do diseases disappear before Dr. Herrick's Sugar Coated Pills. They cannot soexist.

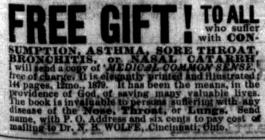

There is no pain, no matter how severe nor what because, that cannot be partly or wholly relieved y Johnson's Anodyne Liniment, used internally and sternally. It is the most powerful remedy known of medical men.

There is nothing so essential to health and happy less as pure rich blood. It prevents exhausted vitally, premature decline, nervous and physical debilitiesides untold other miseries. Parson's Purgative ills purify and enrich the blood, and will change he blood in the entire system in three months.

'Pulmonary Consumption arises from a decline or defiency of vitality in the natural bioplasm or germinal matter, and this deficiency manifests itself not only in a general wasting or atrophy of the whole body, but also in a peculiar degradation, chiefly in the lungs and lymphatic system, of portions of this bioplasm into a sluggish, low-lived, yet paoliferating matter, which instead of maintaining the nutrition and integrity of the tissues (which is the natural office of bioplasm) clogs them, and irritates them with a substance which is more or less prone to decay, and eventually involves them also in its own disintegration and destruction."
