NIAGARA FALLS.

Is Lord Kelvin's Prediction Near Through Man's Use of the Water?

Above the roar of Niagara Falls some people think they can hear the great cataract's knell being rung by science. Lord Kelvin's prediction that the falls in the course of time will disappear is, they apprehend, near fulfillment. Man has already begun to turn to account some of the tremendous energies of that leap of waters. Immense power works are in operation on the New York bank of the Niagara, and three companies are preparing for the development of electricity on a prodigious scale on the Ontario side. Is this conversion of hydraulic into electrical power likely to continue until the water shall be wholly diverted from its course over the falls into penstocks carrying it into power-houses at the foot of the bluff? Some alarm on this point has recently been expressed in New York State by persons who think that the great scenic features of nature should be conserved, even though demands of science and industry have to be denied. The protests that have been made against the mechanizing of the falls are the subject of a special news article and an editorial in The New York Tribune of Sunday. Artists, photographers, lovers of natural scenery, power interests, and persons concerned in the tourist traffic were interviewed, and a considerable volume of opinion was found inclined to the view that the upper waters will in a comparatively short time be conducted to the lower level through power canals and tunnels. By several practical men, however, the opinion was expressed that the falls would remain, notwithstanding any drain kept up on power account. It is pointed out that the river is higher above the falls than at them, and that consequently the tapping of the stream at points slightly above the brink of the cataract will only accelerate the movement of the stream. That acceleration is not likely to be brought at such a rate as to cause any contraction of the great storage basin, Lake Erie. Until that mill pond declines, markedly from its present volume there is little danger of power development greatly checking the impetuosity of the falls. Lake Erie is a shallow reservoir. Its bottom is not far below the level of its outlet, so that the upper Niagara is reasonably certain of continuing to flow as strongly as ever, even though half a dozen power vents are opened for it at the falls. It is complained that the developments on the Canadian side are marrying the

scenery, because the buildings are unsightly. That complaint is unfounded. The fact that all the contracts for power development have been made with the Queen Victoria Park Commissioners is in itself a guarantee that the natural grandeur and beauty of the spot will be protected. Aesthetic considerations have been taken into account in all the agreements. Unsightly buildings are not likely to be seen on our side if the commissioners continue the present policy of fostering the natural scenery.

After crosses and losses men grow humbler and wiser.—Franklin.

Heart Palpitated.

FAINT AND DIZZY SPELLS.

FELT WEAK AND NERVOUS.

COULD SCARCELY EAT.

TWO BOXES OF MILBURN'S HEART and NERVE PILLS

Cured Mrs. Edmond Brown, Inwood, Ont., when she had almost given up hope of ever getting well again.

She writes: "I was so run down that I was not able to do my work, was short of breath, had a sour stomach every night and could scarcely eat. My heart palpitated, I had faint and dizzy spells and felt weak and nervous all the time. My husband got me a box of Milburn's Heart and Nerve Pills but I told him it was no use, that I had given up hope of ever being cured. He however persuaded me to take them and before I had used half the box I began to feel better. Two boxes made a new woman of me and I have been well and have been able to do my work ever since."

Milburn's Heart and Nerve Pills are 50 cts. box, or 3 for \$1.25, all dealers or
