Class \$300.00, 2.30 class \$300.00. See programmes,
Prize-list and other printed matter for particulars.
Geo. E. Fisher, Secretary, Hon. L. J. Tweedie,
President.

ATTENDANCE A RECORD ONE

The British Medical Association Meeting is Over—Questions of Interest.

Toronto Globe.—The Congress of the British Medical Association closed Friday afternoon and the members and visitors are either pleasure-seeking or on their way home. Nearly 2,200 medical men and women were present, a remarkable attendance considering the distance which many of them had to travel. Between sixty and seventy meetings were held. The next meeting will be held in Exeter, England.

Several important statements developed at the closing meetings of the sections. Dr. P. H. Bryce, from his experience as an inspector of immigrants entering Canada, asked that the parochial authorities in Britain guard against assisting men of the "no-good" or unemployable class. A remarkable advance in surgery was shown by Dr. Carroll of Chicago, in the physiology section, who exhibited cats and dogs in which the kidneys of other animals were transplanted.

A BIG STEP IN SURGERY.

Two dogs and two cats, holding in their bodies transplanted kidneys, formerly belonging to other cats and dogs, now unhappily sacrificed in the interests of science, stood before the section on physiology yesterday morning as marvels in surgical accomplishment. All were in fine health and showed the natural desires of their kind, the cats to spit and the dogs to growl. The surgeon who was responsible for this great step in science was Dr. Alexis Carrell of the University of Chicago. Dr. Carrell, who is a comparatively young man, explained his experiments to the physiologists present. One of the dogs present had the transplanted kidney in his neck, and they seemed to be performing their functions successfully. Dr. Carrell said he had already succeeded in having dogs live seventeen days after the operation. One of the cats exhibited had possessed its new set of kidneys for two months.

The limbs of rats and guinea pigs have also been cut off and put on again, the animals doing well after wards. Dr. Carrell was modest as to what he hoped to accomplish on the human being, but other physiologists present were very hopeful though the problem was, they admitted, to get any person to consent to such an operation.

SAY ALCOHOL IS USEFUL.

Another side of the alcohol question was presented in the therapeutics section, where the value of that drug in medicine—surgery was under discussion. Dr. A. B. Blackader of Montreal, said the value of alcohol as a stimulant had been overestimated, but under certain conditions it was useful and had a food value.

Dr. S. J. McEwen of New York said the facts known today were favorable to the judicious use of alcohol in disease. There were reliable experiments on record showing that it developed an immunity in experimental infections, and that it was capable of moderately stimulating the heart and of increasing the blood pressure. Dr. W. E. Dixon of Cambridge, England, gave results of recent experiments which were on the whole favorable to the use of alcohol as a solid, provided they have no seeds or other small substances likely to be orable to the view that alcohol has a distinct action which may be utilized in the treatment of disease.

Professor G. Sims Woodhead, also of Cambridge, urged the other view presented by himself at Wednesday's temperance luncheon, that alcohol was of little value in medicine and should be used with great care.

Some comfort for typhoid patients was supplied by Dr. F. J. Smith of London, Eng., in the medicine section, who condemned the routine cause trouble. He also favored giving a patient food when he wanted it and not when he did not want it. He said he had had good results from this method.

Sir Thomas Barlow, president of the section, was inclined to support Dr. Smith's contentions, but said care should be taken not to give typhoid patients too much food when he became ravenous.

The sleeping sickness prevalent in some parts of Africa, was discussed by Dr. F. W. Mott of London, England, in the section of pathology. He said it was spreading along the lines of commercial communication in Africa and had also reached China. It affected white people as well as natives. It had its seat in the brain and was due to germs, which a fly carried from an infected person by biting both. No cure has as yet been found for it.

INSPECTION OF IMMIGRANTS.

Dr. P. H. Bryce, chief medical officer of the department of the interior commenced the proceedings in the state medicine department by an able paper on the need for international co-operation in the inspection of immigrants and immigrants.

At its last two meetings the surgical section had an attendance of 5,000 which constitutes a record for the association. Before closing yesterday a vote of thanks was passed to Sir Hector Cameron, Glasgow, president of the section, on motion of Sir Wm. Hingston of Montreal, and Dr. Murphy of Chicago.

A valuable paper on the present status of military arrangements in Canada was read in the medicine section by Dr. J. T. Fotheringham. The doctor said that, though Canada was peacefully developing resources, she yet had a media, equipment for her military forces which was creditable for her size.

G. P. R. WILL CARRY WAR TO HILL'S TERRITORY

New York, Aug. 27.—The Herald says: Representatives of the two great railway systems of the Northwest that are at daggers' points about invasions of each other's territories arrived in this city Thursday. They were James J. Hill president of the Great Northern Railway, and Sir William C. Van Horne, chairman of the board of directors of

the Canadian Pacific Railway. Sir William promptly threw down the gauntlet to Mr. Hill, when asked for his opinion of the latter's plan to build a Canadian line from the Pacific Ocean to Winnipeg, in retaliation for the Canadian Pacific's encroachment on the Great Northern's preserves.

"I don't know what Mr. Hill's plans are," said Sir William. "I know that he is a very able man, and when he talks about doing what is clearly a foolish thing, it is safe to assume that it is a cover to something which is not foolish."

Mr. Hill may be seriously planning the building of some line into Canadian Pacific territory, and while I am little more than an individual director in that company now, I do not hesitate to say that two miles of line in the interest of the Canadian Pacific will be built in his territory to every mile he builds in that of the Canadian Pacific."

Sir William expressed a belief that the real motive for Mr. Hill's project to build a Canadian line was the active competition of the Canadian Pacific through business from Chicago to Spokane, Wash.

"Mr. Hill," he said, "is foolish to attribute his attitude to any other motive. In carrying through business from Chicago to Spokane his company adds to its through rates the local rate from Spokane to the coast and back."

"Mr. Hill has built a few spurs northward into Canada, but I don't see how he can make profitable a through line from Vancouver across the mountains to Winnipeg along the route he talks about. From the Fraser River Valley to the plains he would have a heavy grade system, and he would have to parallel a branch line of the Canadian Pacific."

"If he has discovered easy passes through the mountains, he has accomplished something that our engineers have gone over nearly every square foot of the territory, proceeding along the crests of the mountain ranges and making note of every available depression."

Mr. Hill, when informed of Sir William's observations, intimated that the Canadian Pacific's interests evidently did not have a clear realization of the situation.

"That talk about the rates to Spokane is nonsense," he said, "but I'm not going to talk back."

As the Herald said recently, the Canadian line is going to be built, not by Mr. Hill and his friends, but by Mr. Hill and his friends, I am not building any railroads as an individual. It is a Great Northern enterprise."

Further than this the president of the Great Northern would not enter into the controversy. Mr. Hill was enthusiastic over the crop prospects and said the Great Northern had just made a further reduction in grain rates of 10 per cent. The system last year reduced grain rates from 8 to 20 per cent.

Mr. Hill said he was not ready to make any statement regarding an ore deal, and he added that he had not a dollar's interest in the Walsh roads or the Chicago Terminal Transfer Company.

HOW IT SPREADS.

The first package of Dr. Leonard's Hem-Roid (the infallible Pile cure), that was put out to a small town in Nebraska.

It cured a case of Piles that was considered hopeless. The news spread, and although this was only two years ago, the demand prompted Dr. J. S. Leonard of Lincoln, Neb., the discoverer, to prepare it for general use. Now it is being sent to all parts of the world.

It will cure any case of Piles. There is a month's treatment in each box. Sold for \$1.00, with absolute guarantee.

It is for sale by druggists, or by The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

KIDNAPPING PLOT FOR CINEMATOGRAPIH.

Policeman Thought It Was the Real Thing and Arrested the Abductor

Rome, Aug. 27.—A most fantastic scene took place here in the Via Sistina. A wedding procession passed by, the bride and bridegroom walking arm-in-arm, and followed by a large crowd of friends—men in tall hats and ladies in white and wearing rich jewels.

Suddenly a young man rode up to the bride on a bicycle, and rode off with her towards the Piazza di Spagna.

The bridegroom and the witnesses of the incident screamed for assistance, and guards and soldiers who were passing rushed after the fugitives. While the cyclist was pedalling as fast as possible opposite the Spanish Embassy, a policeman on duty succeeded in catching him by the collar.

An enormous crowd assembled, but then the unforeseen happened. The bride and bridegroom and their friends all turned upon the policeman, declaring that he had no right to interfere. The policeman, however, insisted upon taking the cyclist to the nearest police station.

Here it was finally explained that the procession and the abduction were acted for a cinematograph and the only party who did not belong to the company of actors was the policeman.

THE ORIGIN OF GALL STONES.

They are simply dried bile, made up of crystalline constituents of that fluid. Very common is this disease among merchants, clerical men, shop girls and those of sedentary habits. Prevention consists in maintaining correct action of the liver and bowels. That is best accomplished by Dr. Hamilton's Pills. No person using this medicine need fear gall stones, nor will they ever be bilious. Sound digestion, a good appetite, a clear color will evidence the health giving properties of Dr. Hamilton's Pills, which are the best and safest for general family use. Insist on having only Dr. Hamilton's Pills of Mandrake and Butternut, 25c. per box at all dealers.
