

HIS COMPASS FAILED.

Why Wellman Abandoned Expedition to Pote.

The America Remained in Air for Over Three Hours and Proved Her Power and Capability of Being Steered.

BERLIN, Sept. 17.—Walter Wellman, head of the Wellman-Chicago Record Herald polar expedition has sent the following cablegram to The Local Anzeiger from Tromsø:

"After the steamer Express cast off the cable the balloon America did excellently, but an increasing wind soon gave us a hard struggle and the storm drove us toward some high, jagged mountains near the coast, where the airship would have been destroyed if she struck. There then ensued a hard fight between the storm and the motor. The latter triumphed, and we slowly rounded the north end of Foul Island in the teeth of the wind. Our confidence in the America had so increased in the meanwhile that I gave the order to start for the north pole.

"The wind, however, increased to twelve miles an hour, and snow fell so thickly that we could not see a quarter of a mile. Just then the compass failed to act owing to defective construction. We were completely lost in a snow storm above the polar sea and threatened with destruction. After a brief deliberation we decided to try and get back to the express to rectify our compass and start again. It was impossible, however, to keep in one direction, and we were again carried into dangerous proximity to the mountains. Vaniman, the engineer, then made the motor run at top speed, and the America moved a second time against the wind, which probably was blowing fifteen miles an hour. She circled three times in the teeth of the wind. We saw the Express for a moment, but immediately lost her again. Under the circumstances the only thing possible was to try to land. With this idea we stopped the motor and let the America drift over the water.

"After tossing the glider we opened the valve and landed on the upper glacier, had a fire in the tent. The landing was effected successfully. The numerous delicate instruments were not injured. The America was in the air for three hours and fifteen minutes, and covered about fifteen miles with her own machinery. She made three loops against the wind, proving her power and capability of being steered. The ascent was successful in every respect. After this successful attempt we are all convinced the America in normal summer weather, can make her way to the pole."

Life's Pleasures Rest on Nourishing Blood.

IS YOUR'S RICH, OR WFAK?

If your color is poor, your blood is poor.

If you lack strength, can't get fat, can't do your work, it's because your blood is too thin to nourish the body.

Your condition is like an expiring fire. Fuel must be added or the fire goes out.

Nutrient, new buildings material must be instantly infused into the blood—the vital stream must be quickened and enriched. Do this and your health is assured.

Simply take Ferrozone.

Its marvellously stimulating influence upon the appetite upon the formation of rich, red blood makes available for building up of the system the very nutrient it requires.

The heart, strengthened by the increased nutrition Ferrozone supplies, is more regular in its action, and imparts an impetus to the circulation that ensures the proper discharge of all the functions of the body.

There very quickly sweeps through the whole body a stream of vitalized, strength-giving blood.

Quickly color is restored to the cheeks.

Elasticity, endurance and vigor come to the muscular system.

In brief, the old time strength and vigor are restored, and those inestimable charms that spring from good health, high spirits and endurance, are gained by even a short use of Ferrozone.

A true uplifting tonic, a medicine that goes to the root of things—one that makes the weak strong, makes the sick well—makes the despondent ones happy—that is Ferrozone. Truly a wonderful remedy, try it, 50c. per box at all druggists.

"I Believe It To Be The Most Effective Remedy For The Stomach And Nerves In The Market," is what Anne Patterson, of Sackville N. B., says of South American Nerve, for she says, "La Grippe" and the complications which followed it left her next to dead with indigestion, dyspepsia and General Nervous Shattering. It cured her." Sold at Central Pharmacy, A. J. Ryan.—100

FINE TRUCK WAGON.

McFarlane's Exhibit at Exhibition Attracting Much Attention.

Farmers and lumbermen visiting the exhibition are much interested in the exhibit of the McFarlane Wagon Works of Nashua, N.H., which occupies a space on the ground on the lower side of the main building. The McFarlane's are the leading manufacturers of heavy farm wagons in this province, and their work enjoys a deservedly high reputation. They have had many years' experience in the business and know exactly what is best adapted to the needs of the province.

The leader of their exhibit is the famous pivot axle wagon, specially adapted for portaging. It is strong and durable, made of the best material

and finished in a most workmanlike manner. It is easy running and can be used on a side hill without tipping.

The concern are also showing one of their half-low wagons, a new style of vehicle which is rapidly coming into favor with the farmers. It is very strongly built, and farmers who have used it declare that they would have no other.

Warden MacFarlane is in charge of the exhibit and will esteem it a pleasure to show and explain the strong points of his wagons to visitors.

EARNERS' INSTITUTE MEETINGS.

Farmers' Institute meetings will be held next week at the following places:

Monday evening, Sept. 23rd, at 8 o'clock, at Temperance Hall, Lower French Village, Agricultural Hall, Blissville.

Tuesday evening, Sept. 24th at 8 o'clock, in the Agricultural Hall, Lower Prince William; Agricultural Hall in Stanley; Victoria Hall in Wellsford.

Wednesday evening, Sept. 25th, at 8 o'clock, School House, Scotch Lake; Orange Hall, Williamsburg; Agricultural Hall, Westfield.

Practical speakers will be in attendance at each place, everybody involved.

SNAKE AS STOWAWAY.

How The London "Zoo" Secured A New Python.

Among the recent arrivals at the Zoological Gardens London was a Python which shipped itself on board the s.s. Hysan, of the Ocean Steamship Company, and was only discovered among the cargo of white logs when the vessel was being unloaded at the Albert Docks. The stowaway was promptly secured by means of a sack, which was thrown over it, and the authorities at the "Zoo" were communicated with.

When Mr. Tyrrell, who looks after the snakes at Regent's Park, arrived at the docks, he found that the reptile was a young reticulated python some three feet long, and although suffering from the effects of its captivity in the sack, it was otherwise uninjured.

PROVED AFTER FIFTY YEARS.

The test of time has proved that Putnam's Corn Extractor cures quicker, with less discomfort and acids, is purely vegetable and absolutely guaranteed. Insist on "Putnam's" only—it's the best.

Macaroni.

Macaroni is taken from a Greek derivation which means "the blessed dead," in allusion to the ancient custom of eating it at feasts for the dead.

Hot Water Bags.

When a hot water bag is emptied, there is always a little moisture left inside and one will notice that the inner sides cling together, which is not well for the bag. After emptying, blow hard into the bag, quickly scrub in the stopple and your bag, being slightly inflated, will dry quickly inside, and you will find that the rubber will last much longer.

Bee Hives.

It is calculated that Europe and America have between them about 8,000,000 hives of honeybees.

Britain.

Britain was known to the Phoenicians as Barut-Anac, or "the land of tin," as far back as the year 1037 B. C. Some 500 years afterward the island was alluded to by the Romans under the name of Britannia, which subsequently became shortened into Britain.

Fire Extinguishers.

The first successful fire extinguisher was invented and operated by one T. Phillips of London, in the year 1849. This apparatus, while a success at putting out fires, was commercially a failure.

Old Roman Women.

Among the Roman women at one period there was a morbid ambition to grow beards, and they used to shave their faces and smear them with unguents to produce these inappropriate appendages. Cicero tells us that at one time to such an extent did the mania for beards grow upon women that it was found desirable to pass a law against the "adornment."

London Theaters.

The oldest London theaters are Drury Lane theater, opened 1663; Sadler's Wells, started as an orchestral assembly room in 1683; Haymarket, 1720; Covent Garden, 1732, and Lyceum, 1795.

Peter's Pence.

Peter's pence was presented by Ina, King of the West Saxons, to the pope about 725, for the endowment of an English college in Rome. The fund took its name from the fact that it was agreed to be paid on Peter mass, Aug. 1. The tax was laid on all families possessed of 20 pence yearly rent in land, out of which they paid 1 penny.

The Cent.

It is an interesting fact that the cent was first proposed by Robert Morris and named by Thomas Jefferson.

Pillow Wrinkles.

Sleeping with the eyes buried in the pillow will bring wrinkles all around them and will produce that look of very old age that wrinkles bring into the face. Even a baby who sleeps with its face in the pillow will wake up with a thousand wrinkles.

All must respect those who respect themselves.—Bearsdenfield.

A SPY THAT FAILED.

The "Shipwrecked" Sailor That Haunts the Dreadnought.

The extraordinary interest and curiosity excited by Britain's biggest battleship will be well remembered. The secrecy observed by the admiralty and all concerned regarding the details of her construction and armament created a vast amount of speculation not only at home, but, on account of the strenuous competition and the jealousy existing between the rival powers, abroad also. It is safe to assume that great efforts have been made in certain quarters to obtain any information possible concerning the record battleship.

In view of this fact, a story just to hand from an unimpeachable source possesses a singular significance.

Some little while ago the Dreadnought started on her trial cruise. This of course brought foreign interest in the vessel to a climax. If the trials failed, then Britain's boast was an empty one, while, on the other hand, information regarding the behavior of the warship while under trial would be eagerly welcomed. The authorities naturally took every precaution against the leakage of information, and a picked crew of officers and men was put on board.

The Dreadnought started out from Gibraltar, her destination being Trinidad. She had, however, left the "rock" but a few hours' sail behind when an object was observed floating some distance ahead over the starboard bow. As the Dreadnought drew nearer it was seen by those on board to be an open boat. A man was standing up in her waving something over his head in order to attract attention.

The Dreadnought slowed down, a boat was lowered, and the man after some little time was taken on board the battleship.

He proved to be a foreigner, seemingly of Spanish origin. He was given food and drink, and when he was thus refreshed he said he was a sailor and that his vessel had been wrecked in a gale four days previously. He had escaped in an open boat, with only a small loaf and a jar of water. He was, he said, the sole survivor of the catastrophe.

Those in authority on board the Dreadnought after continuing to question him became suspicious. There had been no signs of a gale in that locality for some time. The man looked too well fed and hearty to have fasted for practically four days. There were also other contradictory points in his story. After a consultation it was eventually decided to confine the man in a safe place aboard with a view to testing his story at a later date.

In view of all the circumstances and especially the remarkable coincidence of this mysterious battleship on the first day of her trials, picking up a foreigner with a contradictory improbable story, the action of the commander seems amply justified. Assuming for a moment, as we may do, that the whole affair was a ruse on the part of a foreign spy, it was one of the cleverest ever devised.—Liverpool Post.

Electricity on Railroads.

It is not now believed that for some time to come electricity will be installed on steam railroads for long hauls. Judging from the very costly experiments of the New York Central and the Pennsylvania roads in New York city, a scientist says: "The introduction of electricity on steam railroads will be confined for the present at least to large city terminals, where by abolishing a large amount of the switching the daily capacity for trains will be greatly increased. It will also be applicable to those sections of the mountain divisions on which the heavy grades occur, provided always that either water power or cheap fuel is available. The electric locomotive because of its great tractive power is particularly suited to the handling of trains over heavy grades, and it will prove to be exceedingly valuable in increasing the weight of the ruling train loads over any given division."

A Curious Phenomenon of Ice.

It is reported in La Presse Medicale of Paris that M. Sacerdote has discovered that the center of a block of artificial ice is generally opaque, while the part first frozen, the outside, is generally clear. As the water freezes slowly, all the impurities are pushed away from the part first freezing. Whatever the character of the water which is frozen, that obtained by melting the outer clear parts is almost perfectly pure, while the central opaque parts contain the impurities. Bacteria do not escape this law, but will be found centrally congregated.

Economy in the use of machine oil and axle grease means prodigality in horseflesh.

The profit of a gold mine depends, not on the amount of rock crushed under the stamps but upon the amount of gold which can be extracted from the rock. In a similar way the value of food, which is eaten does not depend on the quality which is taken into the stomach but upon the amount of nourishment extracted from it by the organs of nutrition and digestion. When these organs are diseased they fail to extract the nourishment in sufficient quantities to supply the needs of the several organs of the body, and these organs cannot work without nourishment. The result is heart trouble, liver trouble, and many another ailment. Dr. Pierce's Golden Medical Discovery, acting on every organ of the digestive and nutritive system, restores it to health and vigor. It cures diseases remote from the stomach through the stomach in which they originated. "Golden Medical Discovery" contains neither alcohol nor narcotics.

SOME FASHIONABLE SLEEVES.

There is no more important factor in the make-up of a gown than the sleeve. If the arm covering is a bit smart and becoming, the whole waist is improved thereby. In remodelling waists, the sleeves should be made as nearly up to the fashion as possible and here are shown sleeves of good style and well suited to make-overs. The first two show graceful sleeve caps with shoulder strap and Mandarin sleeve band respectively. Both are in combination with a full short puff which may be made long to the wrist by means of a deep cuff, if desired. The last sleeve is finished with another style of Mandarin, the front and back views being given for here also. The sleeve bands may be of a trimming material or the same as the sleeve. For the medium size the first two styles require 2 1/2 yards of 27-inch material for each pair and the last yerd.

6936—sleeves, small, medium and large. The price of this pattern is 10c. The sleeves are suitable for ladies' and misses'.

To the Frederickton Herald:

Please send the above mentioned pattern, as per directions given below, to

Name.....

No.....

To.....

Measurement—Waist..... Bust.....

CAUTION.—Be careful to send size of pattern wanted. When the pattern is sent measure you need only mark 32, 34, or whatever it may be. When in waist measure, 22, 23, 24, or whatever it may be. If a skirt, give waist and length measure. When miss' or child's pattern write only the figure representing the age. It is not necessary to write "inches" or "years." Patterns cannot reach you in less than three or four days from the date of order. The price of each pattern is 10 cents in cash or postal order or stamps.

"See here," said the theatrical manager, "you must drop your overbearing behaviour towards the other members of the company."

"Indeed," replied the leading lady, haughtily. "I'm the star, am I not?"

"Well, yes, but just remember that you're not a fixed star."

TO LET:

Hotel property at west end at present occupied by Jos. Richards Esq., possession given May 1st, next.

FOR SALE:

Several farms as well as lots in the city or its vicinity, including 60 acre farm with good buildings, and within 4 miles of the City Hall, and cuts 20 tons of hay.

TO LOAN:

Money on mortgage at lowest rates Apply to
