SELECTIONS

THE SPOTS ON THE SUN.

They Point to the Inevitable Doom of the Whole World. The observatory on Mount Wilson, California, and the electric laboratory at the foot of the mountain in Pasadena, working together, have lately succeeded in throwing a very interesting light on the nature and meaning of sun spots.

We may as well make up our minds to reckon the sun spots in, on a very generous scale, when we cast up the chances of the future for our planet. Earthquakes and volcanic eruptions spasmodically devastate limited regions of the earth's surface, but the sun spots, with the exceeding slowness and inevitable sureness of the mills of the gods, bring onward the doom of the whole world.

This is apparent from the fact revealed by experiments with the electric furnace that the peculiarities of the light emitted by sun spots are explicable only by the lowered temperature of the spots and from the further fact that these same peculiarities exist in the light of certain stars, which for a variety of reasons are believed to be more advanced in age and cooler than our sun. The inference is unavoidable that sun spots must be considered as forerunners of the general loss of the sun's power of radiation. He is yet close to the noon point, probably a little past it, and henceforth, as his afternoon declines, sun spots will become more and more numerous and greater and greater in area, or else the cooling process now manifested by their presence will assume a more general form, affecting the whole of the solar disk. And as this progresses the vivifying heat will be withdrawn from the earth, with consequences which we can regard with acedemical equanimity only because, measured by the span of human life, they must be so remote.

A problem affecting the more immediate future is that of the manner in which a sun passes through the various stages of obscuration. It is disquieting to watch the behavior of some of the stars a little more advanced than the sun in age.

We should hope that the sun will never imitate, for instance, Betelgeuse, one of his older and larger brothers, for Betelgeuse undergoes several times in a century, changes of radiation which would quickly put the earth out of commission as a fighting planet if they occurred in the sun.—New York American.

THE ENGLISH CHANNEL TUNNEL.

To run a grave national risk for the sake of protecting some thousands of tourists from the very transient discomforts of seasickness would indeed be the climax of dementia. For through goods traffic the tunnel might be of advantage to the continental farmer and manufacturer. In view of the prohibitive foreign tariffs it would be of little use to British trade. We cannot abandon British insularity because some distinguished soldier has asserted that the channel tunnel could be easily defended against 200,000 by fifty. On military grounds a bridge across the channel would be preferable from every point of view to a tunnel under the water. No coup de main could secure a bridge against the action of the British navy. Modern engineering skill is certainly equal to the construction of such a bridge.—Ignotus in National Review.

THE GOLDEN RIDDLE.

M. Capel, an alchemist of Pomet, in France, who has long been trying to manufacture gold, met with an unfortunate accident just when he believed that he had solved the golden riddle. He called his wife and three children into his laboratory and showed them what appeared to be a nugget of gold. He was explaining to them the process he had used when he inadvertently pushed a basin containing some gunpowder too near a lamp. A terrific explosion followed, blowing up the entire laboratory and leaving it a heap of ruins. Neighbors recovered the shattered bodies of the alchemist, his wife and three children. The wife was able to speak, but died on her way to the hospital.

CARELESS ELEVATOR OPERATORS.

A reckless habit of many elevator operators is that of neglecting to use their control levers at the end of the runs, depending upon the automatics at top and bottom. The practice is a growing one and is fraught with danger, especially on the down runs and to plunger machines on the up runs. Operators have been observed frequently to start an express car down and then entirely let go of the control lever. The best automatic cutoff device is subject to possible disarrangement by the sliding of stops, jumping of rope or other slight mishap, and operators should be disciplined into the proper use of the control at both end landings.—R. P. Bolton in Engineering Magazine.

ALPINE TUNNELS.

More Swiss tunnels through the Alps are being projected. That of the Splügen, from Coire to Chiavenna, is now in a forward state. The estimates and plans are now in the hands of the members of the federal chambers. The extreme length of the proposed line is about fifty miles, while that of the tunnel itself is only about fifteen miles. The cost of construction would be about five millions. The time would be about eight years. Another project is that for a tunnel through Todi mountain in connection with the question of the Greina and the Leutisberg railway.

Shell Sounds. The peculiar murmuring sound, not unlike the ripple of the waves on a still evening, which we hear on placing a shell or other hollow object to the ear is due to the fact that the concave surface concentrates and multiplies all different sounds around us, so as to render them audible. The many sounds always present in the air are augmented by the resonant cavity of the shell.

The property on George street known as "The Rectory" includes dwelling and the fine grounds in connection. The property has a frontage on the street of 132 feet and extends back the same width 165 feet. HARRIS G. FENETY Sol. Christ Church Prop. Feb. 20—d3d3i.

CITATION TO HEIRS & PARTIES INTERESTED

Stamp of the value of fifty cents. Seal of the Court of first instance of the northern district of Lower California.

In the matter of the intestate of Thomas Lucy, deceased, under date of December nineteenth, one thousand nine hundred and four, the Hon. Robert Otanez, Judge of the Court of first instance of this district, duly made an order allowing the said estate to proceed to probate, and to cite all the heirs and persons interested in said estate, by notices to be published three times in the interval of ten days each, at the places designated by section 1746 of the Code of civil procedure, allowing the time of four months to those persons residing in foreign countries and thirty days to those residing in this country, to be counted from the last publication of said notice, to appear and prove their claims, and in pursuance to said order this notice is issued for publication. We attest A. K. RODRIGUEZ, G. Appel Ensenada, Lower California. September nineteenth, one thousand nine hundred and six. March 15—d3i.

LEGISLATIVE NOTICE.

Notice is hereby given that application will be made at the ensuing session of the Legislative Assembly of the Province of New Brunswick for an Act to incorporate a company for the purpose of building a railway from a point at or near Letang, in the Parish of St. George, in the County of Charlotte, to a point on the Saint Croix River in the County of York. St. George, N. B., February 12th, 1907. (Signed) J. SUTTON CLARK. Feb. 4—4w. March 12—d 1 mo.
