

Finished Floors Made to Walk On

The Sherwin-Williams Modern Method Floor Finishes are made first of all to walk on—to stand hard foot wear and look well for the longest time. They are made for finishing any floor, old or new—in any style desired. You can select any one of them and by following our instructions obtain the best looking and best wearing finish it's possible to get.

Painted and varnished floors are rapidly taking the place of dusty, germ collecting carpets. They look better, are easier to keep clean, are more healthful and more economical. For these reasons finished floors are in general use in all classes of homes.

The Sherwin-Williams Modern Method Floor Finishes include:

- For Painted Finish—Inside Floors—The S-W. INSIDE FLOOR PAINT.
- Porch Floors—The S-W. PORCH FLOOR PAINT.
- For Varnished Finish—Natural—MAR-NOT, a durable floor varnish.
- Stained—FLOOR-LAC, stain and varnish combined.
- For Waxed Finish—The S-W. FLOOR WAX.
- For Unsightly Cracks in Old Floors—The S-W. CRACK AND SEAM FILLER.

Let us tell you more about them.

Dated this 27th day of April, A. D., 1907.

L. W. JOHNSTON,

Principal Assessor.

April 27th, dtf.

MEN AND WOMEN.

The Big 4 for venereal diseases. Guaranteed to cure in 48 hours. No pain, no odor, no discharge. No return. No cure, no money. Guaranteed. U.S.A.

She—And is my Percy quite happy? He—Certainly, pet. I wouldn't dare to be anything else.—Sketch.

A Definition.
Jimmy—What does "unseemly levity" mean?
Tommy—That's when somebody's laughin' at you.—New York Press.

Old Orchards.
It is an exceptional case when an old orchard should be filled with young trees. Generally the soil is exhausted by the former growth. The better plan is to set in a new location.

The Parrot Tongue.
A little girl had been in the habit for a long time of saying a prayer every morning in which were the two lines: All through the day, I humbly pray, Be thou my guard and guide.

One day when she had finished she electrified her aunt by saying: "Aunt Emma, that is the most foolish prayer I ever heard. What do I want with a garden guide?"

Estelle's Astronomy.
Our little Estelle was perplexed when she found that this wonderful world that we live on is round.

How 'tis held in its place, In its orbit so true, Was a puzzle to her. With no answer in view.

"It must be," said Estelle, "Like a ball in the air That is hung by a string, But the string isn't there!" —Chicago News.

BANK OF NOVA SCOTIA

(INCORPORATED 1832.)

CAPITAL, - - \$3,000,000

RESERVE FUND, \$5,250,000

Unexcelled facilities for the transaction of all kinds of Banking Business.

Special attention given to the Savings Department and interest credited quarterly on Savings Accounts.

This is the only bank having its head office in Canada that submits its books and statements to independent audit.

ANNOUNCEMENT

NEWSOME & GILBERT, LIMITED

Manufacturing Stationers

TORONTO & WINNIPEG

WILL H. NEWSOME, LIMITED

L. C. SMITH & BROS. TYPEWRITERS

TORONTO HALIFAX MONTREAL

Amalgamated January 1, 1907.

We beg to announce that we have this day amalgamated with Newsome & Gilbert, Limited, and will in future carry on the business as Newsome & Gilbert, Limited, with Head Office, Toronto, and Branches at Winnipeg, Montreal and Halifax.

Owing to the wonderful growth of our business, the Amalgamation enables us to look after the wants of our many customers, both in Typewriter and Stationery lines, and we respectfully solicit a continuance of your valued trade.

The maritime end of the business will continue under the management of Mr. P. O. Soules, who is a director in the New Company and he will look as faithfully after the requirements of our Eastern Customers as in the past.

WILL H. NEWSOME, Limited

P. O. Soules

Vice-Pres. & East. Mgr.

A "VICTORY" SHIELD FOR EVERY SCHOOL IN CANADA.

Lord Strathcona's Gift to the British and Foreign Sailors' Society.

To the Editor of the Herald.

Sir,—Having recently passed through your vast Dominion from Victoria on the Pacific to Quebec on the Atlantic, holding meetings in some of your chief cities and schools en route, it gives me the greatest pleasure to announce through your widely read paper a patriotic offer to every school in Canada.

Lord Strathcona and Mount Royal is not only known as the High Commissioner in London, but as the grand old man of Canada—not old as to mental alertness and manifold activities for his beloved country, for during the historic gathering of the premiers in London no man was more in evidence from early morn till late at night.

Notable to attend the 89th annual meeting of the British and Foreign Sailors' Society, of which Admiral H. R. H., the Prince of Wales is Patron, held through the kindness of the Lord Mayor of London, at the Mansion House, Lord Strathcona sent me this cheering letter:

"Dear Mr. Matthews,—I am exceedingly sorry that my official duties make it impossible for me to be present at the anniversary meeting of your society this afternoon. You know I am entirely in sympathy with the work of your society, and it will afford me much pleasure to contribute £1,000 for the purpose of providing a 'Victory' Shield to the schools throughout the Dominion, to be distributed as you suggest.—Believe me to be, dear Mr. Matthews, yours sincerely, Strathcona."

The Society has taken a big thing for a big country. But I feel confident that as heretofore, the government will admit the Shield and Souvenir duty free, and that of the Ministers of Education and various Educational Authorities and teachers will co-operate with us to ensure the successful carrying out of this project. The Society has already spent several thousand pounds in its educational, patriotic, and philanthropic work in connection with its Nelson Centenary and Anniversary Celebrations.

In addition to the copper given to the Society by the Lords of the Admiralty, taken from Admiral Nelson's other historic flag, ship "Victory," all the copper left from Nelson's other historic flag-

ship, "Foudroyant," was secured, to be used for the above purposes.

The sacred promise made to the Admiralty when the material was given was, that any financial outcome should go for the benefit of seamen. In carrying out, therefore, by the kind assistance of Lord Strathcona, this great project in Canada, we are anxious that every school, however small in numbers, however far from the frontier, should have its "Victory" Shield. But at the same time we would like to receive even from the smallest school not less than one dollar for the Society's work among seamen. And every boy or girl giving or collecting only 25 cents will receive a "Victory" Charm made from the same copper.

WE WILL HELP SAILORS' WORK IN CANADIAN PORTS.

The Society, in addition to caring for seamen in many ports of the world, when away from their own countries (as Canadian seamen for instance), will also co-operate with friends in Canadian ports, east and west, by suitable Institutes, Bethels, Rests, of an interdenominational character. Canada in supplying the British Isles and British Colonies and other portions of the world, to say nothing of its being the "All-Red Route" to New Zealand, Australia, etc., must have increased shipping and sailors.

The Shield will link the historic past with the prophetic future. As Empire Day comes round, or annual examinations, the Shield will be awarded to the successful competitor on a Maritime or Empire subject. Lord Strathcona's name will go to every school to remind the rich in the days to come of what the country owes to its schools, and Nelson's ship will ever point to "duty" and what the nation, and specially the Colonies beyond the seas, owe to ships and sailors. Schools can communicate with the Ministers of Education, or with me at the Passmore Edwards Sailors' Palace, Limehouse, London, England.

Faithfully yours,
EDWARD W. MATTHEWS, Secretary.

Passmore Edwards Sailors' Palace, Lon., Eng., Empire Day, May 24/07.

ROTHESAY SCHOOL CLOSING.

The closing of Rothsay College for Boys will take place Tuesday, June 11, one day earlier than the date stated in the cards of invitation and program of events. The events mentioned for Tuesday will take place on Monday.

The complete program of the closing is as follows:

Sunday, June 9th.
11 a. m.—Confirmation service.
3.15 p. m.—College Sunday service preacher, the Right Reverend J. A. Richardson, D. D. coadjutor bishop.

Servants in St. Paul's church, Roth say: Rev. A. W. Daniel, rector; Rev. H. R. Trunpourt, M. A., B. D., assistant minister.

Offering devoted to the fund for education of children of the clergy.

Monday, June 10.
2.30 p. m.—Preliminary athletics. Tuesday, June 11.
2 p. m.—Final athletics.
4 p. m.—Inspection of cadet corps by Lt. Col. G. Rolt White, D. O. C.

Presentation of prizes.

There will be the usual one fare excursion rate from St. John and a city band will be in attendance in the afternoon, Tuesday.

WHEN ILLNESS COMES.

Have you near at hand a remedy that will alleviate pain and help till the doctor comes? A wise thing is to have right in your home a bottle of "Nerviline" which gives instant relief, and prevents disease from spreading. Nothing known for the stomach and bowels that compares with Nerviline. For cramps, indigestion, heartburn and headache, it's indispensable. For fifty years Polson's Nerviline in 25c. bottles has been a family stand-by. Get it today.

Herschel's Memory.

Until he had become a very old man Sir John Herschel retained the strength of intellect and freshness of memory which enabled him to accomplish his great scientific work. Sir Henry E. Roscoe in his autobiography records an instance when Herschel was seventy-four years old.

One evening in 1833 I happened to meet him. He mentioned as an interesting piece of news that a star recently discovered had suddenly burst out into first or second magnitude.

"Do you know," said Herschel, "that when I was at the Cape I observed a precisely similar phenomenon?"

He considered a moment and added, "Yes, it was in the year 1835." Again he paused but a moment and concluded, "On August the 16th at 1 o'clock in the morning."

STOP LIMPING, CURE THE CORN

Quickly done by Putnam's Painless Corn Extractor. Acts in one day, causes no pain, removes every trace of soreness. Fifty years of success proves Putnam's is the best. Refuse substitutes.

WHY THE WIND BLOWS

A Study of the Circulation of the World's Atmosphere.

FORCES THAT MOVE THE AIR.

Contrasts in Temperature, High and Low Pressure and a Law of Nature Called the Deflecting Force of the Earth's Rotation.

It is a matter of common observation that when the window of a warm room is opened on a still winter night the cold air from without rushes into the room. Nearer the ceiling the warmer air is forced out of the window, thus completing a general atmospheric circulation on a miniature scale. These currents of air, which might properly be called wind, would not occur if the air within doors was not warmer and consequently lighter than the air without.

The range in temperature between the equator and the north pole amounts in winter to considerably more than 100 degrees F., and in summer the contrast is also great. Moreover, in summer the continents are warmer than the oceans, but in winter the reverse is true. Three examples will serve to illustrate how such contrasts affect the winds of the world.

At the equator the temperature averages about 80 degrees throughout the year. Consequently the lower air flows in from regions of high pressure on each side, forming what are known as the trades. These winds cover nearly one-half of the earth's surface and blow with much steadiness the year round.

The monsoons, or "seasonal winds," of India and the Indian ocean are the most interesting of their class. In summer the cooler ocean air pushes in toward the land, while the warmer air over the continents rises to a considerable height and then flows out to sea, forming a systematic circulation between ocean and continent. In winter the ocean is warmer than the continent, and the winds reverse their direction.

The "land and sea breezes" occur with much regularity near large bodies of water in some parts of the world. The ocean is cooler than the land during the day and warmer at night, causing on a small scale a daily interchange of air similar to that caused by the monsoons.

A clear knowledge of the term "air pressure" is very helpful in studying the causes of wind. Air, like a stone, presses against the ground—in other words, it has weight, amounting to no less than 2,117 pounds upon every square foot of the earth's surface at sea level—but, unlike a stone, the atmosphere is elastic to a high degree and also presses in all other directions.

On account of this elasticity of the air, certain forces which arise from differences in temperature and the earth's rotation cause it to become dense or heavy in some regions and rare or light in other regions. It is the effort of the atmosphere to overcome these pressure differences and resume a state of equal density, that causes the winds to blow.

The column of mercury in a barometer tube is always just balancing a column of air of the same diameter, reaching from the barometer to the top of the atmosphere. If the air is dense the mercury will of course stand high in the tube, and to express this condition we use the term "high pressure," but if the air is rare the mercury will stand low in the tube, and we then use the term "low pressure."

Over the United States, Canada and other parts of the world the pressure is ascertained each day at numerous stations. The barometer readings, expressed in inches of mercury, are telegraphed to a central point and there charted on a map. The exact regions where the pressure is high or low may then be seen at a glance. It has been learned from such observations that these areas are constantly moving eastward at an average rate of about 600 miles per day.

Technically the low pressure areas are called "cyclones" and the high pressure areas "anticyclones." They are frequently 1,000 or more miles in diameter. The little storms of great destructive force so often called cyclones are really tornadoes.

The higher the pressure in any particular region relative to some other region the greater will be the velocity of the wind. The winds blow much faster in winter than in summer, because the greater contrasts of temperature cause more decided differences in pressure.

Observations demonstrate, however, that the wind never blows in straight lines, because all bodies of air when in motion are acted upon by a law of nature called the "deflecting force of the earth's rotation." This force turns all wind to the right of its course in the northern hemisphere and to the left in the southern.

Thus if a wind in our hemisphere starts north it is soon turned slowly toward the northeast, or if it starts west it will soon turn toward the northwest. When it is remembered that at the equator the earth is rotating at the enormous velocity of 1,035 miles an hour, one will not wonder that such a deflecting force could exist. All areas of high and low pressure, from whatever cause, therefore become whirling masses of air, and a little thought will show that they must turn in opposite directions. In the northern hemisphere the low areas, or "lows," as they are designated on the weather map, always rotate in a direction contrary to that of the hands of a watch.

At this season of the year the first unnatural looseness of a child's bowels should have immediate attention. The best thing that can be given is Chamberlain's Colic, Cholera and Diarrhoea Remedy followed by castor oil as directed with each bottle of the remedy. For sale by all Dealers.
