Some Interesting Information for Busy Housewives.

FRENCH METHODS.

The modern method of preserving is just being generally adapted from the French. The amounts used at one time are small, so as not to crush the fruit. The sugar is boiled to the soft boil degree, and the fruit added, the dish covered and set away. The time varies according to the kind of fruit used. For instance, raspberries are much tenderer than cherries and would take less time to become permeated with the syrup. After some time the fruit is brought to the boil again; this is repeated more than once, covering and setting the fruit away for an hour. When the fruit is allowed to boil up it does not mean to come to a boil only, but to boil up once to the top of the preserving pan, as if it were to boil over, and it must not be stirred. Of course sugar boiled to the soft boil degree makes a very heavy syrup—very heavy with sweetness, not corn starch, like some of our tinned preserves advertised to be in heavy syrup, at least before pure food laws were in vogue.

Salt and lemon juice will remove iron rust, ink and mildew from white goods.

A library of books may be saved from moulding by sprinkling a few drops of oil of lavender about it.

The odor of perspiration can be prevented with a few drops of ammonia in the bathing water.

A very good substitute for cream in coffee is the yolk of an egg well beaten. One egg will season three cups.

Plaster casts and ornaments can be cleansed by covering with cold starch and brushing the powder off when dry.

To take out iodine stains dip the articles in milk and rub the spots with starch as with soap, rinse in clear water.

Wash ironware outside as well as inside in hot soapy water, then rinse in clear hot water and wipe dry with a crash towel.

If silk is washed in warm soda containing at least a spoonful of ammonia the polish can be preserved for a long time.

CAN SEE INTO THE EYE.

French Optician Uses Light From Mercury Vapor Lamp.

Paris, Aug. 1.—A new contrivance likely to be of great service to eye diagnosis is reported by the Academy of Science. Dr. Fortin has discovered that light from a mercury vapor

lamp, passing through two sheets of blue glass and reflected into the eye by a large lens, reveals the internal condition infinitely better than ordinary white light, by placing a screen with a pinhole between the light and the eye a magnified image of vessels at the back of the retina, which have been hitherto almost invisible, has been obtained. Capillary

veins, the diameter of which is only two-thousandths of a millimeter, are seen to distend with each heart beat, and it is even possible to count the blood globules.

TAKE THE POSTMASTER'S WORD FOR IT.

Mr. F. M. Hamilton, postmaster at Cherryvale, Ind., keeps also a stock of general merchandise and patent medicines. He says: "Chamberlain's Colic, Cholera and Diarrhoea Remedy is standard here in its line. It never fails to give satisfaction, and we could hardly afford to be without it." For sale by all dealers.

SHOCKING CRUELTY.

Drunken Carter Stabs His Horse With Pitchfork.

MONTREAL, July 30.—A case of shocking cruelty was brought before the Arraignment Court today. A drunken carter drove his cart into a ditch, and then abused his horse frightfully. In his efforts to get out of the ditch he made use of a four-pronged fork, and tortured the animal. In the first place he struck the horse several blows on the ribs with the flat of the pitchfork, but as this failed to have the necessary effect, he turned his attention to the head of the animal and dealt it a number of stunning blows. The horse made desperate efforts to get the cart on the main road, but as it jammed hard against the bank, it had no possible chance. Heedless of the fact, the drunken driver continued to

beat the animal, and eventually he commenced to pound it with the prongs of the pitchfork. He used all his strength and drove the steel prongs a couple of inches into the body of the poor horse. When he had finished there were no fewer than thirty wounds on the right flank of the animal and twenty on the left. Blood was streaming from the wounds, and it spouted out and covered the body of the man who was causing the injuries. The suffering animal, in its agony, shrieked with pain, but the enraged man, who was killing it by his fiendish cruelty, paid no heed. Doubtless he would have done it to death had a man not appeared on the scene and wrested the pitchfork from his grasp. The carter was sentenced to 15 days in jail.

LET THE STOMACH ALONE.

You can't cure catarrh by dosing the stomach. The disease is in the throat, nose and bronchial tubes. Inhale Catarrhzone to the spot where the disease really is,—it clears away foul secretions, stops discharges at once, purifies and heals the passages, literally annihilates every trace of catarrh. Nothing else is so direct and certain as "Catarrhzone." Results guaranteed. Two sizes, 15c. and \$1.00 at all dealers.

"George, the cook has gone." "Let her go. I never liked her." "But she took all my current jelly and both my best tablecloths." "O, let her go." "And she carried off the recipe for waffles you like so well." "What's that! Which way did she go? Why did you not call the police?"

First Allotment of 50,000 Shares at Fifteen Cents per Share

15c

Our option on this small block of Underwriters' Stock expires August 6, 1907. Subscriptions post-marked at later date will be returned.

Do you realize that investments of a hundred or a thousand will grow rapidly into hundreds and thousands and millions of dollars? The over-conservative and skeptical wildsmile—they will laugh at these predictions, some will even consider this a joke—but remember COBALT, if you please, two or three years ago? Then it was a "vision," it was a "dream," "a flash in the pan," "a bubble," somebody was "crazy," but now it is different. Those crazy men are now classed among the smartest and keenest business men of the day. The actual value of a few mines are worth at the present date more than one hundred millions of dollars. These are facts.

In presenting this investment for subscription we appeal to the good judgment of sensible persons as to its merit.

It embodies, we believe, a correct method for developing and establishing successful and paying mining enterprises.

We desire first of all, to conduct a successful mine development. We intend this to be done in a way that will be absolutely fair and honest, and bring the largest profit possible to those who co-operate with us.

We therefore desire this proposition to be well understood by investors. We wish it to be known just how we propose to develop, establish and operate dividend paying mining companies by and through this investment.

THE PLAN—The plan involved in this proposition is that of uniting or consolidating the investments of a limited number of persons into one sum, and under one management, to be used in acquiring and developing mining properties in this wonderful region.

THE PRINCIPLE involved in this investment, we believe, is one of absolute fairness to all interested. The "promotion interest," common to all mining companies, and to investors who put their money into stocks of these companies and whose money develops and makes the mine, if a mine is developed—does not exist in this proposition. There is no "promotion interest" There is no "promotion interest" bought and paid for by the investors.

In this proposition the investors and all the investors become promoters. They take the "promotion interest" and all the interest. They own the whole enterprise. No matter how large or small the investment—all stand on an equal basis. Our field of operation is probably one of the richest mineralized regions in the world.

For its basis, upon which we will establish and build up several great producing, paying mining companies, we will exploit and develop in a mining like and careful manner extensive

mining properties now known to us, and other properties which we may acquire for the mutual benefit of all investors in the company.

SUBSIDIARY COMPANIES.—The Larder Lake Exploration and Development Company will incorporate a series, not to exceed five, of subsidiary mining companies upon only the real proven properties acquired.

In each and every subsidiary company incorporated, whether mining, milling, smelting, water power or electric light, the Exploration Company will take over 90 per cent. of the capital stock of each company, and will put 10 per cent. of the capital stock of each company in its treasury. It will probably never become necessary to sell any of this treasury stock.

Out of the total capital stock of each subsidiary company, the Exploration Company will retain 50 per cent. as its "Holding Stock." It will always control the company. It will take and hold 40 per cent. for the mutual benefit of all stockholders in the Exploration Company. This 40 per cent. will be known as the "Selling Stock," and as a market is created, it will be sold, and the proceeds received will be distributed pro rata to the stockholders in the Exploration Company, as their interests may appear.

The stock of the subsidiary companies will be listed on the New York Curb and Mining Exchanges of the country and started at 50 cents a share, where it can be bought and sold according to the daily market quotations. This will afford a channel by which stockholders can sell the 40 per cent. "Selling Stock" from time to time, if they wish.

PROPERTIES.—Many different mining properties will be acquired and developed as stock in the Exploration Company is subscribed for. All properties will be described, and reports submitted regarding same, as soon and as often as they can be examined by the engineers.

The mining properties which will be acquired for this proposition will be

located in the gold and silver belt, extending from the Montreal River through Northern Ontario, eastward into Quebec, and will include properties in the Lady Evelyn District, the new Montreal River Silver District, Cobalt District, and the gold districts around Round Lake, Larder Lake, Lake Abitibi, and in the great undeveloped mineralized section of Quebec lying just east of Larder Lake and extending northward to Lake Abitibi.

We shall try and make every dollar count, and make as few mistakes as possible. We hope to create such an interest in this enterprise with investors that will result in extensive and widespread co-operation.

Under this plan no one can truthfully say that it is not a great mining investment. We want every investor to feel a personal interest in this mine development. The investors in this company will own this enterprise, and we want them to co-operate with us and our associates to make it a great success.

We are now organizing THE LARDER LAKE EXPLORATION AND DEVELOPMENT COMPANY, with what we consider sufficient capital (\$500,000). We now have options on and propose to acquire five distinct and separate properties which will be incorporated at \$100,000 each (100,000 shares—par value \$1.00). The Exploration Company will at all times hold a controlling interest in each of these companies, so that sixty per cent. of the dividends earned and declared will be paid into the treasury of the parent company, and the other forty per cent. distributed among the stockholders on record. This, in our opinion, will enable us to pay dividends and large ones in the very near future.

The board of directors in The Larder Lake Exploration and Development Company will be composed only of engineers of national repute, setting a precedent in this line—Mr. Robert Morton will be president, which fact in itself guarantees conservative and able management.

Investors have been pouring their

money into over-capitalized mining companies, they have been plunging about wildly in the hope of some day "striking it rich," never stopping to think for an instant that the greater part of their money never reaches the ground, as a rule, seventy-five per cent. of the money invested in stock schemes goes into the broker's hands. He pays his salesmen 20 to 50 per cent. on every dollar turned in, he must get his own commission, and engineers must be paid.

We never have had associated with us a stock salesman, we require no commission, and our engineers will be our directors, so that every dollar invested with us on this proposition will be honestly used in the purchasing and development of the different properties.

We are now offering for subscription the first allotment of stock in The Larder Lake Exploration and Development Company—every one hundred shares entitles the holder to forty shares of stock in each of the subsidiary companies to be incorporated, making in all 200 shares of stock in five different companies, which, as soon as development work is started and dividends announced, will make the stock of the Larder Lake Exploration and Development Company almost invaluable. This first allotment of only 50,000 shares (\$1.00 par value) will probably be largely over-subscribed in a few days.

The next allotment will be put out September 25th, 1907, at 75 cents per share or higher.

This price (15c) will positively be withdrawn August 6, 1907. If this allotment is over-subscribed remittances will be promptly returned. Checks, drafts and money orders must accompany all applications and be made payable to the financial agents.

Interim certificates will be promptly returned to subscribers. The stock certificates of the company representing the shares purchased will be issued and delivered as soon as allotment can be made, after the 6th of August, to all subscribers who purchase at the first underwriting price prior to that date.

Are you going to get in now, in time, at Larder Lake; you can now get in at the ground floor prices on inside properties, making big profits and lots of money; or will you wait three or four months or a year, and then fall all over yourself in an irresistible desire to get in anywhere or at any price?
