

ALMOST A DISTURBANCE

The tall individual with the frayed newspaper in his hand approached the pudgy little man in the wilted collar. "My friend, you look intelligent. Tell me which is correct—see city?" The little man mopped off the perspiration and glared pitifully. "I saw go on! What do you think I know about fleas and flies? Go to some natural history museum, learn."

"Pardon me, you do not understand I said flea or fly."

"I know what you said. Do you think I am an insect factory?"

"No, no, my friend! I—"

"Then what do you want to ask me about fleas and flies for?"

"I only thought that you could enlighten me. You have an intelligent face and—"

"An intelligent face? And that's the reason I look like a study bug, eh? On your way before I bat you on the back."

And then the pudgy little man mopped his collar and wondered whether the tall chap was a lunatic.

DEATHLY GRAMPS

STOMACH WAS BLOATED

A Bad Case That Proves Cramps and Stomach Disorders are Cured Fast by Nerviline.

"The distress I suffered from cramps last summer was so severe I thought it meant death," writes P. H. Emerson, of Guys Hill P. O. "I was doubled up with pain and in such bad shape I couldn't walk a hundred feet. I remembered having Nerviline on hand and took half a glassful in sweetened water. In five minutes I was well and my stomach derangements disappeared entirely."

For cramps, flatulence, diarrhoea and disorders of the stomach and bowels, Nerviline knows no equal—some million bottles used every year—fifty years on the market, that's proof enough of its merit. Large 25c bottles, five for \$1.00. All dealers or the Catarthozone Company, Kingston, Ont.

An old plasterer is called upon to give evidence for the plaintiff. Counsel for the defendant tries to bully him.

It's fortunate for the average man that he doesn't know half the things that he would like to know.

SHOOTING WHALES.

Modern Whalers Use a Cannon and an Explosive Harpoon.

Whaling with modern methods in Alaskan waters is an exciting game, especially for those who are new to the business. The modern whaling steamer is a little vessel almost round on the bottom, which enables it to be turned and managed with the greatest ease. Mounted at the bow is a small cannon that shoots a harpoon weighing more than 100 pounds and having an explosive head, called the bomb.

If the shot is good and the harpoon is planted squarely behind the fin, the bomb crashes into the lungs, killing instantly; if not, the struggle may last for several hours.

After a whale has been killed the carcass is brought alongside the boat and inflated so that it will float. A long coil of rubber hose, one end of which is attached to a pump and the other to a hollow spear pointed tube of steel, with perforations along its entire length, is used for this purpose. The spear is thrust well down into the whale's side, the air pump started and the body slowly filled with air. When inflated enough to keep it afloat the tube is withdrawn, the incision plugged with oakum and the carcass cast off. A buoy with a flag is attached to the body, and it is then set adrift to be picked up at the end of the day's hunting.

The whaling station is a group of buildings situated in a bay or cove near enough to the feeding grounds to allow the steamer to come in each night with the day's catch. The whales are anchored at a buoy in front of a long, inclined platform, upon which they are drawn, tail first, by means of a steam winch.

The saying that every part of the pig but the squeal is now of market value is also a fact with the whale. Not a particle of the animal is wasted. After the skeleton is stripped of flesh it is disarticulated and the bones chopped in pieces.

The blubber is tried out for oil, and the meat and bones are boiled for the same purpose. Later the flesh is artificially dried and sifted, making a fine guano, and the bones are ground up for fertilizer. Even the blood is boiled and dried with the flesh, and the water in which the blubber has been tried out makes excellent glue. The fins and tail, after being sliced into thin strips, are salted and barreled and shipped to Japan as an article of food.

—World's Work.

That Boy.

The boy who rates arithmetic—Most any boy's a sample—Is likely not to like the man You point as his example.

A New City a Thousand Years Old.

Budapest, whose front is circled with lights like a crown, whose hills rise dark and feathery above the river, whose parliament buildings run along the bank and are second to none but Westminster—Budapest, bright, flashing, gay, beautiful, modern and rich, ardent and executive, close built and amalgamative, blender of peoples—is the product of only a few decades, and yet at its last exposition it celebrated its thousandth birthday. Pest, to the right of the river—for the cities are twin and divided by the Danube—Pest dates back to 1200, and Buda was the Ofen of the Romans. Buda climbs up the opposite hill, today magnificently new, but soon round with green crumbling walls that mark the passing of the original founders whose painted galleys came up the Danube from the Black sea. The twentieth century civilization, sharply new and powerful, must for a moment be brushed aside and the Buda of mediæval times put in its stead.—Marie Van Vorst in Harper's Magazine.

Gathering Cloves.

Cloves are now cultivated in many of the tropical regions of the earth. A clove tree, begins to bear at the age of ten years and continues until it reaches the age of seventy-five years. There are two crops a year, one in June and one in December. The tree is an evergreen and grows from forty to fifty feet high, with large oblong leaves and crimson flowers at the end of small branches in clusters of from ten to twenty. The tree belongs to the same botanical order as the guava. The cloves, which are the undeveloped buds, are at first white, then light green and at the time of gathering bright red. Pieces of white cloth are spread under the trees at harvesting time, and the branches are beaten gently with bamboo sticks until the cloves drop. They are dried in the sun, being tossed about daily until they attain the rich dark color which proclaims them ready for shipment.

Almost Asphyxiated.

St. Catharines, July 28.—Mrs. Smith, an old lady, residing on Geneva street had a narrow escape from death by asphyxiation and was only saved by the timely action of Dr. Jory and Jessop. The old lady had not been seen since Sunday and when a couple of men received no reply to their knock, a window was broken in and Mrs. Smith was found lying apparently dead.

Coroner Jory was notified and found she had been overcome by gas fumes from a gas stove she had lighted on Saturday, but found there was still a spark of life. With the assistance of Dr. Jessop she was brought to, but is still partially paralyzed and in a precarious condition.

EIGHTEEN INCH HATS.

New Foreign Creation Will Succeed the Peach Basket.

New York, July 29.—A consignment of 200 of the monumental hats for women which it is predicted will displace the wide-spreading peach baskets got here Tuesday from Paris on the steamship Kronprinz Wilhelm. The hats are made of fur and suggest the bearskins of the Old Guard. They are called Russian toques.

The toque does away with rats and the spreading coiffure that makes a lady's head a good enough umbrella in a rainstorm. On the other hand, it is a skyscraper. The loftiest may be slightly over a foot and a half—more than three times the height of a man's silk hat—from the foundation at the forehead to the apex, which is crowned with an aigrette. The lady who wears the hat must comb her hair upward and secure it in a ball—a high ball—on the very top of her head. Little ladies may wear the very tallest hats, but tall ones can soften the grenadier effect by wearing one foot high creations and reducing the spray of feathers. Viewed from a rear elevation, the toque fits the head snugly. When the lady takes it off, as she is expected to do at the theatre, she will reveal a bunch of hair tightly coiled that will not be wide enough to obstruct the view of the stage of any two-eyed man.

You can pick your fur and pay \$1,000 for a hat, but it is not doubted that girls with on thousand dollar bills to spare will be towering over their sweethearts in that looklike fur that will have cost not more than \$3.98.

Will Not Go Through.

Montreal, July 29.—It is learned that a New York syndicate has offered par for a controlling interest in the International Coal & Coke Co., whose property is at Coleman, Alberta, and although large holders are favorable to the deal, enough of the stockholders cannot be induced to part with their stock at that price and the probability is that the sale will not be accomplished.

Drowned at Brockville.

Brockville, July 29.—Walter Conlon, an employee of the steamer Island Belle, was drowned at the C.P.R. wharf here yesterday morning. The boat left here with a full complement of passengers, and as Conlon was in the act of handling a stern line he fell overboard, and in view of a hundred or more people was drowned, but a few feet from the wharf.

Stolen Jewelry Returned.

Ottawa, July 28.—Some time ago John Williamson of Woodroffs had some jewelry, valued at \$80, and \$80 in money, stolen from his car. The reported thief has returned the jewelry, placing it in a shed at the rear of the house, but the money is still missing.

STOMACH LIVER LUNGS

Each of the chief organs of the body is a link in the Chain of Life. A chain is no stronger than its weakest link, the body no stronger than its weakest organ. If there is weakness of stomach, liver or lungs, there is a weak link in the chain of life which may snap at any time. Often this so-called "weakness" is caused by lack of nutrition, the result of weakness or disease of the stomach and other organs of digestion and nutrition. Diseases and weaknesses of the stomach and its allied organs are cured by the use of Dr. Pierce's Golden Medical Discovery. When the weak or diseased stomach is cured, diseases of other organs which seem remote from the stomach but which have their origin in a diseased condition of the stomach and other organs of digestion and nutrition, are cured also.

The strong man has a strong stomach. Take the above recommended "Discovery" and you may have a strong stomach and a strong body.

GIVEN AWAY.—Dr. Pierce's Common Sense Medical Adviser, new revised Edition, is sent free on receipt of stamps to pay expense of mailing only. Send 31 one-cent stamps for the book in paper covers, or 50 stamps for the cloth-bound volume. Address Dr. R. V. Pierce, Buffalo, N. Y.

IMPERIAL HALL
