

THE SCARLET PIMPERNEL

BY BARONESS ORCZY.

(Continued.)

How that stupid, dull Englishman ever came to be admitted within the intellectual circle which revolved round "the cleverest woman in Europe," as her friends unanimously called her, no one ventured to guess—golden eyes said to open every door, asserted the more malignantly inclined.

Enough, she married him, and the "cleverest woman in Europe" had linked her fate to that "demoniac" Blakeney, and not even her most intimate friends could assign to this strange step any other motive than that of supreme eccentricity. Those friends who knew, laughed to scorn the idea that Marguerite St. Just had married a fool for the sake of the worldly advantages with which he might endow her. They knew, as a matter of fact, that Marguerite St. Just cared nothing about money, and still less about a title; moreover, there were at least half a dozen other men in the cosmopolitan world equally well-born, if not so wealthy as Blakeney, who would have been only too happy to give Marguerite St. Just any position she might choose to covet.

As for Sir Percy himself, he was universally voted to be totally unqualified for the onerous post he had taken upon himself. His chief qualifications for it seemed to consist in his blind adoration for her, his great wealth, and the high favor in which he stood at the English court; but London society thought that, taking into consideration his own intellectual limitations, it would have been wiser on his part, had he bestowed those worldly advantages upon a less brilliant and witty wife.

Although lately he had been so prominent a figure in fashionable English society, he had spent most of his early life abroad. His father, the late Sir Algernon Blakeney, had had the terrible misfortune of seeing an idolized young wife become hopelessly insane after two years of happy married life. Percy had just been born when the late Lady Blakeney fell a prey to the terrible malady which in those days was looked upon as hopelessly incurable and nothing short of a curse of God upon the entire family. Sir Algernon took his afflicted young wife abroad, and there, presumably Percy was educated, and grew up between an imbecile mother and a distracted father, until he attained his majority. The death of his parents following close upon one another left him a free man, and as Sir Algernon had led a fairly simple and retired life, the large Blakeney fortune had increased tenfold.

Sir Percy Blakeney had travelled a great deal abroad, before he brought home his beautiful, young, French wife. The fashionable circles of the time were ready to receive them both with open arms. Sir Percy was rich, his wife was accomplished, the Prince of Wales took a very great liking to them both. Within six months they were the acknowledged leaders of fashion and of style. Sir Percy's coats were the talk of the town, his initiatives were quoted, his foolish laugh copied by the gilded youth at Almack's or the Mall. Everyone knew that he was hopelessly stupid, but then that was scarcely to be wondered at, see-

ing that all the Blakeneyes, for generations, had been notoriously dull, and that his mother had died an imbecile.

Thus society accepted him, petted him, made much of him, since his horses were the finest in the country, his fetes and wines the most sought after. As for his marriage with "the cleverest woman in Europe," well, he inevitable came with sure and rapid footsteps. No one pitied him, since his fate was of his own making. There were plenty of young ladies in England, of high birth and good looks, who would have been quite willing to help him to spend the Blakeney fortune, whilst smiling indulgently at his inanities and his good-natured foolishness. Moreover, Sir Percy got no pity, because he seemed to require none—he seemed very proud of his clever wife, and to care little that she took no pains to disguise that good-natured contempt which she evidently felt for him, and that she even amused herself by sharpening her ready wit at his expense.

But then Blakeney was really too stupid to notice the ridicule with which his clever wife covered him, and if his matrimonial relations with the fascinating Parisienne had not turned out all that his hopes and his dog-like devotion to her had pictured, society could never do more than vaguely guess at it.

In his beautiful house at Richmond he played second fiddle to his clever wife with imperturbable bonhomie; he lavished jewels and luxuries of all kinds upon her, which she took with inimitable grace, dispensing the hospitality of his superb mansion with the same graciousness with which she had welcomed the intellectual coteries of Paris.

Physically, Sir Percy Blakeney was undeniably handsome—always excepting the lazy, bored look which was habitual to him. He was always irreproachably dressed, and wore the exaggerated "Incorrigible" fashions, which had just crept across from Paris to England, with the correct, cool taste innate in the English gentleman. On this special afternoon in September, in spite of the long journey by coach, in spite of rain and mud, his coat set irreproachably across his fine shoulders, his hands looked almost impossibly white, as they emerged through billowy folds of finest Modigliani lace; the extravagantly short-waisted satin coat, wide-lapelled waistcoat, and tight-fitting striped breeches, set off his massive figure to perfection, and in repose one might have admired so fine a specimen of English manhood, until the foppish ways, the affected movements, the perpetual inane laugh, brought one's admiration of Sir Percy Blakeney to an abrupt close.

He had lolled into the old-fashioned inn parlor, shaking the wet off his fine coat, and putting up a gold-rimmed eyeglass to his lazy blue eyes, he surveyed the company, upon whom an embarrassed silence had suddenly fallen.

"How do, Tony? How do, Froufroues?"

he said, recognizing the two young men and shaking them by the hand. "Zounds, my dear fellow," he added, smothering a slight yawn, "did you ever see such a beastly day? Demmed climate this."

With a quaint little laugh, half of embarrassment and half of sarcasm, Marguerite had turned towards her husband, and was surveying him from head to foot, with an amused little twinkle in her merry blue eyes.

"Lal," said Sir Percy, after a moment or two of silence, as no one offered any comment, "how sheepish you all look. . . . What's up?"

"Oh, nothing, Sir Percy," replied Marguerite, with a certain amount of gaiety, which, however, sounded somewhat forced, "nothing to disturb your equanimity—only an insult to your wife."

The laugh which accompanied this remark was evidently intended to reassure Sir Percy as to the gravity of the incident. It apparently succeeded in that, for, echoing the laugh, he rejoined placidly:

"Ja, m'dear! you don't say so. Begad! who was the bold man who dared to tackle you—eh?"

Lord Tony tried to interpose, but had no time to do so, for the young Vicomte had already quickly stepped forward.

"Monsieur," he said, prefixing his little speech with an elaborate bow, and speaking in broken English, "my mother, the Comtesse de Tournay de Basserville, has offended Madame, who, I see, is your wife. I cannot ask you pardon for my mother; what she does is right in my eyes. But I am ready to offer you the usual reparation between men of honor."

The young man drew up his slim stature to its full height and looked very enthusiastic, very proud, and very hot as he gazed at six foot odd of gorgeousness, as represented by Sir Percy Blakeney, Bart.

"Lal, Sir Andrew," said Marguerite, with one of her merry infectious laughs, "look on that pretty picture—the English turkey and the French bantam."

The simile was quite perfect, and the English turkey looked down with complete bewilderment upon the dainty little French bantam, which hovered quite threateningly around him.

"Lal sir," said Sir Percy at last, putting up his eye-glass and surveying the young Englishman with undisturbed wonderment, "where, in the cuckoo's name, did you learn to speak English?"

"Monsieur!" protested the Vicomte, somewhat abashed at the way his warlike attitude had been taken by the ponderous-looking Englishman.

"I protest 'tis marvellous!" continued Sir Percy, imperturbably, "demmed marvellous! Don't you think so, Tony—eh? I vow I can't speak the French lingo like that. What?"

"Nay, I'll vouch for that!" rejoined Marguerite. "Sir Percy has a British accent you could cut with a knife."

EXHIBITION

Today's programme presents several items of interest. To the exhibitors the payment of the prize money at 2 o'clock will doubtless prove an attractive feature. The general public are being catered for by a grand ring parade of all horses which have taken prizes. This event will follow the judging of horses in harness which will take place at 2.30 p. m. In the evening the final and the best display of fireworks is promised and should be well worth seeing. The exhibition will close at 10.30 p. m., when the exhibitors will be free to remove their goods or if they prefer it they can keep them there over Sunday.

THE POULTRY SHOW.

The judging of the poultry was continued yesterday morning and the judge, Sharpe Butterfield, left for Sherbrooke (Que.) last evening. Mr. Butterfield, in speaking of the show, said it was very well arranged and many fine birds were exhibited. The showing of Wyandottes was especially good, being equal to any in Canada. They were certainly the best ever placed on exhibition in this city.

Coming to the prize list not being arranged just as it should be in some classes, it was difficult in some cases, he said, to make the awards as listed. It is on this account that in some classes the winner of prizes are credited with having won three or four firsts or seconds in these classes. Following is a list of the prize winners:
